As is known to us, there are best sale and after-sale service of the H35-211\_V2.5 certification training materials all over the world in our company. Our company has employed many excellent experts and professors in the field in the past years, in order to design the best and most suitable H35-211\_V2.5 Latest Questions for all customers. More importantly, it is evident to all that the H35-211\_V2.5 training materials from our company have a high quality, and we can make sure the quality of our products will be higher than other study materials in the market.

The Huawei H35-211\_V2.5 Exam covers a wide range of topics, including access network technologies, protocols, and standards, network devices and solutions, network security, and network management. Candidates will be required to demonstrate their ability to design, implement, and troubleshoot various access network scenarios, including wired and wireless networks, broadband access, and IP voice services.

## **Latest H35-211\_V2.5 Test Vce, H35-211\_V2.5 Pass Guaranteed**

In the modern world, obtaining H35-211\_V2.5 certification is essential. With the growing popularity of Huawei, the demand for

professionals holding this HCIP-Access V2.5 (H35-211\_V2.5) certification holders has increased significantly. Unfortunately, many candidates fail to pass the H35-211\_V2.5 Exam due to outdated HCIP-Access V2.5 (H35-211\_V2.5) exam study material. Such failure can lead to the loss of time, money, and confidence.

## Huawei HCIP-Access V2.5 Sample Questions (Q122-Q127):

### NEW QUESTION # 122

(Radio) A power access service deploys GPON Type C dual attribution protection, and the protection group is fixed with the upstream Ethernet port status on the OLT, and when the Ethernet port status associated with the protection group on the OLT becomes down, the following description is incorrect.

- A. OLT laughs at onu uplink state changes
- B. After the inversion, the service on the ONU is sent to the OLT through the protect port, that is, the service packet is transmitted on the protect example planting road
- C. The state of the onU side work port changes to standby
- D. The ONU detects link failures and triggers protection reversals

**Answer: D**

### NEW QUESTION # 123

If a rogue ONU exists on a PON port of the OLT and has gone online, another ONT or all ONTs connected to the same PON port may go offline or go online and offline frequently.

- A. TRUE
- B. FALSE

**Answer: A**

Explanation:

A rogue ONU that transmits out of schedule or at abnormal optical levels can disrupt upstream time-slotting on the PON, causing collision and interference. This can force other ONUs on the same PON to deregister or flap frequently. Huawei OLTs provide rogue ONU detection/isolation to protect the PON.

References: HCIP-Access V2.5 Study Guide (PON Faults-Rogue ONU Impact and Handling); Huawei OLT Maintenance Guide (Rogue ONU detection and isolation).

### NEW QUESTION # 124

On the U2000 network management, the oLT PON port LED is not green, indicating that the PON port is faulty.

- A. wrong
- B. Right

**Answer: A**

### NEW QUESTION # 125

Compared with Type C dual-homing protection, which of the following statements about Type C single-homing protection are correct?

- A. Protects important services such as enterprise and base station private line access services.
- B. When the OLT or uplink of the OLT is faulty, services can be switched to the other OLT.
- C. If the OLT is faulty, services are interrupted.
- D. The networking is simple, and the OLT and ONU management is simple.

**Answer: C,D**

Explanation:

Type C dual-homing provides device-level protection with two OLTs; when one OLT/uplink fails, services switch to the peer OLT. In single-homing, ONUs are associated with only one OLT; therefore an OLT failure interrupts services (C). Single-homing has

simpler networking and management than dual-homing (D). It does not offer switchover to another OLT (so B is incorrect), and the "important-service" positioning in A is typically applied to dual-homing scenarios that require the highest availability.

References: HCIP-Access V2.5 - GPON Protection Types A/B/C and Application Scenarios; OLT Protection Configuration Guide - Single-homing vs. Dual-homing Characteristics.

### NEW QUESTION # 126

(Radio) When the invitation message sent by user A reaches user B after passing through server C, D, E, the message received by user B is VIA. The server address of the field information record is in descending order.

- A. C-E->D
- B. E->C->D
- C. E->D->C
- D. C->D->E

**Answer: C**

### NEW QUESTION # 127
