HP HPE7-A08 考試大綱：

主題	簡介
主題 1	• Troubleshoot the Wired Network Solution: Candidates in this section, typically Network Support Specialists, are tested on identifying common wired network failures such as IP or VLAN mismatches, hardware issues, or port misconfigurations. It also involves analyzing performance problems caused by QoS or configuration errors and formulating effective remediation plans to restore correct network operations.
主題 2	• Install and Configure the Wired Network Solution: This domain evaluates the abilities of Network Engineers to provision and configure HPE Aruba Networking switches both via Aruba Networking Central and command-line interface. It covers physical switch setup, Layer 2 and Layer 3 configuration and validation, multicast features, security implementations, quality of service (QoS) settings, and integration of Aruba Networking solutions into existing environments.
主題 3	• Create the Implementation Plan for the Wired Network Solution: This section measures the skills of Network Designers who focus on understanding the HPE switching portfolio and selecting the right products to match various customer requirements. Candidates must also demonstrate the ability to create detailed and effective implementation plans based on given designs or customer scenarios to ensure successful wired network deployments.
主題 4	• Manage, Maintain, Optimize, and Monitor the Wired Network Solution: This part measures the skills of Network Operations Engineers in managing and maintaining wired network infrastructures. It includes developing configuration management strategies, interpreting network operational data to make informed decisions, and programmatically auditing or configuring Aruba Networking switches to optimize performance and reliability.

問題 #50

A customer is reviewing HPE Aruba Networking Central's Client Insights and notices that several wireless clients are not displaying flow attributes and network activity in the profile tab. This deployment is using AOS-10 mobility gateways.

What are the possible reasons why this data is not visible in HPE Aruba Networking Central?
(Select two)

- A. The client's SSID is configured as mixed mode, and the clients experiencing the issue are tunneled out of the APs
- **B. The wireless client VLANs on the gateways are marked as trusted**
- C. The wireless client VLANs on the gateways are marked as untrusted
- D. The client's SSID is configured as bridged
- **E. The client's SSID is configured as mixed mode, and the clients experiencing the issue are bridged out of the APs**

答案: B,E

問題 #51

Which two overlay technologies are supported on Aruba CX switches? (Select two)

- A. MPLS
- **B. EVPN**
- **C. VXLAN**
- D. GRE

答案: B,C

解題說明:

EVPN (Ethernet VPN) and VXLAN provide network virtualization, enabling multi-tenant segmentation and scalable Layer 2 overlays over Layer 3 networks.

問題 #52

A network has an ABR that connects area 0 and 1. A network engineer configures a summarized route for area 0. The ABR is a designated router (DR) for the segment it uses to connect to area 1.

Which LSA type is assigned to this route when the summarized route is advertised into area 1 by the ABR?

- A. LSA 1
- B. LSA 2
- **C. LSA 4**
- D. LSA 3

答案: C

問題 #53

You need to run a packet capture on a CX switch and be able to view the full output on a remote device in real-time. What is the best way to do this?

- 答案：C

- A. show vlan config
- B. show vlans
- C. show switchport vlan
- **D. show vlan interface**
