

C_TS422_2023 Prüfungsressourcen: SAP S/4HANA Cloud Private Edition - Production Planning and Manufacturing & C_TS422_2023 Reale Fragen

2026 Die neuesten ITZert C_TS422_2023 PDF-Versionen Prüfungsfragen und C_TS422_2023 Fragen und Antworten sind kostenlos verfügbar: https://drive.google.com/open?id=1oM3lbdGyfv2jCYC191rOt_6l13dlaHUN

Alle IT-Fachleute sind mit der SAP C_TS422_2023 Zertifizierungsprüfung vertraut. Sie alle träumen davon, ein Zertifikat zu bekommen. Sie können Ihren Traum verwirklichen und eine gute Berufskarriere machen. Durch die Schulungsunterlagen zur SAP C_TS422_2023 Zertifizierungsprüfung von ITZert können Sie bekommen, was Sie wollen.

SAP C_TS422_2023 Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Capacity Planning in SAP S • 4HANA: This section covers a discussion of SAP S • 4HANA best practices, SAP HANA database concept, SAP Fiori user experience, and embedded analytics capabilities.
Thema 2	• Introduction to SAP S • 4HANA Supply Chain Planning: This part covers the background and motivation for SAP S • 4HANA, its main components, business applications, and user experience strategy.
Thema 3	• Lean Manufacturing in SAP S • 4HANA: This section covers repetitive manufacturing master data, line load planning, and Kanban systems.
Thema 4	• Demand Management in SAP S • 4HANA: This section covers a comparison of production methods in various manufacturing environments.

Thema 5	Managing Clean Core: This section covers the application of clean core principles to enhance business process agility, reduce adaptation efforts, and drive innovation in ERP systems.
Thema 6	- Master Data in SAP S 4HANA: This section covers the exploration of crucial production-related master data elements, with emphasis on bill of material, routing, and production version.
Thema 7	- Introduction to SAP S 4HANA Production Planning: This section covers an overview of production planning components, functions, and planning approaches. Exploration of emerging trends.
Thema 8	- Production Orders in SAP S 4HANA: This section covers BOM item categorization, order status management, availability checks, routing selection, order type setup, and material handling processes.

C_TS422_2023 Mit Hilfe von uns können Sie bedeutendes Zertifikat der C_TS422_2023 einfach erhalten!

Die Schulungsunterlagen zur SAP C_TS422_2023 Zertifizierungsprüfung sind preiswert, sie verfügen auch über hohe Genauigkeiten und große Reichweite. Nachdem Sie unsere Ausbildungsmaterialien zur SAP C_TS422_2023 Zertifizierungsprüfung gekauft haben, werden wir Ihnen einjähriger Aktualisierung kostenlos anbieten. Hier versprechen wir Ihnen, dass wir alle Ihre bezahlten Summe zurückgeben werden, wenn es irgend ein Qualitätsproblem gibt oder Sie die SAP C_TS422_2023 Zertifizierungsprüfung nicht bestehen, nachdem Sie unsere Schulungsunterlagen zur SAP C_TS422_2023 Prüfung gekauft haben.

SAP S/4HANA Cloud Private Edition - Production Planning and Manufacturing C_TS422_2023 Prüfungsfragen mit Lösungen (Q50-Q55):

50. Frage

What are the prerequisites for a reporting point confirmation in repetitive manufacturing? Note: There are 2 correct answers to this question.

- A. Defining the relevant work centers in the routing
- B. Activating the reporting point backflush in the work centers
- C. Defining the operations as reporting points using the control key
- D. Activating the reporting point backflush in the order dependent parameters

Antwort: B,C

51. Frage

What does the material type influence?

Note: There are 2 correct answers to this question.

- A. Whether the material is produced in-house, procured externally, or both
- B. Which document types and class categories are allowed
- C. Which material master screens appear and in which sequence
- D. Which plant-specific and plant-independent statuses are allowed

Antwort: A,B

Begründung:

The material type is a key attribute that classifies materials according to their characteristics and determines how they are processed in the system. The material type influences the following aspects of material management:

Which material master screens appear and in which sequence: The material type controls which fields are required, optional, or hidden in the material master record. It also determines the order in which the screens are displayed when creating or changing a

material master record. Different material types may have different views and fields depending on the business requirements. For example, a raw material may have a purchasing view, while a finished product may have a sales view.

Whether the material is produced in-house, procured externally, or both: The material type defines the procurement type of the material, which indicates how the material is procured. The procurement type can be in-house production, external procurement, or both. The procurement type affects the planning and execution of the material requirements. For example, a material with in-house production procurement type will generate planned orders, while a material with external procurement type will generate purchase requisitions or schedule lines.

The material type does not influence the following aspects of material management:

Which document types and class categories are allowed: The document type is a key attribute that classifies documents according to their business purpose and determines how they are processed in the system. The document type controls the number range, field selection, and status profile of the document. The document type is independent of the material type and can be used for any material type. For example, a purchase order document type can be used for any material type that is procured externally. The class category is a key attribute that classifies classes according to their application area and determines how they are processed in the system. The class category controls the characteristics, object types, and inheritance rules of the class. The class category is independent of the material type and can be used for any material type. For example, a material class category can be used for any material type that has characteristics.

Which plant-specific and plant-independent statuses are allowed: The status is an attribute that indicates the current condition of an object in the system. The status can be plant-specific or plant-independent, depending on whether it applies to a specific plant or to all plants. The status is independent of the material type and can be used for any material type. For example, a material can have a plant-specific status of blocked for quality reasons, or a plant-independent status of discontinued. Reference: Material Type | SAP Help Portal, Material Master (LO-MD-MM) | SAP Help Portal, Document Types | SAP Help Portal, [Class Category | SAP Help Portal], [Status Management | SAP Help Portal]

52. Frage

What are some benefits of planning with planned independent requirements for finished materials? Note: There are 2 correct answers to this question.

- A. Reduced times for final assembly
- B. Option to use maketooorder production
- C. Option to forecast planning for production resources
- D. Reduced delivery times

Antwort: A,D

53. Frage

How are dependent requirements for assemblies created? Note: There are 2 correct answers to this question.

- A. They are created with exact times in Advanced Planning.
- B. They are created together with the independent requirement for the finished product.
- C. They are created on assembly level during the planning run.
- D. They are only created for multilevel bill of material (BOM) structures.

Antwort: A,C

54. Frage

Advanced Planning uses master data from SAP S/4HANA Cloud Private Edition. In which data objects can you set the Advanced Planning flag? Note: There are 2 correct answers to this question.

- A. Material
- B. Production version
- C. Plant
- D. Work center

Antwort: A,D

Begründung:

In SAP S/4HANA Cloud Private Edition, Advanced Planning (PP/DS) integrates with core master data, and the "Advanced

Plant(B) doesn't have an Advanced Planning flag-PP/DS activation is at the system or object level (e.g., via CIF integration model), not plant-specific. Production version(C) (MRP 4 view) links BOMs and routings but lacks a specific PP/DS flag-its relevance comes from the material and work center settings. This is per SAP' s PP/DS master data setup.
