Exam Microsoft SC-401 Preview - Latest SC-401 Test Objectives

Every day is new beginning; we will have a good mood. Hot and outstanding IT certification will be a good beginning for your IT career road. Microsoft SC-401 current exam content will be a strong helper for you. If you want to realize your dream and get a certification, BraindumpsIT provide the best valid Microsoft SC-401 Current Exam Content materials to help you pass tests. And you will have a great progress in a short time.

Microsoft SC-401 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Implement Data Loss Prevention and Retention: This section evaluates Data Protection Officers on designing and managing data loss prevention (DLP) policies and retention strategies. It includes setting policies for data security, configuring Endpoint DLP, and managing retention labels and policies. Candidates must understand adaptive scopes, policy precedence, and data recovery within Microsoft 365.
Topic 2	<ul style="list-style-type: none"> • Implement Information Protection: This section measures the skills of Information Security Analysts in classifying and protecting data. It covers identifying and managing sensitive information, creating and applying sensitivity labels, and implementing protection for Windows, file shares, and Exchange. Candidates must also configure document fingerprinting, trainable classifiers, and encryption strategies using Microsoft Purview.
Topic 3	<ul style="list-style-type: none"> • Protect Data Used by AI Services: This section evaluates AI Governance Specialists on securing data in AI-driven environments. It includes implementing controls for Microsoft Purview, configuring Data Security Posture Management (DSPM) for AI, and monitoring AI-related security risks to ensure compliance and protection.
Topic 4	<ul style="list-style-type: none"> • Manage Risks, Alerts, and Activities: This section assesses Security Operations Analysts on insider risk management, monitoring alerts, and investigating security activities. It covers configuring risk policies, handling forensic evidence, and responding to alerts using Microsoft Purview and Defender tools. Candidates must also analyze audit logs and manage security workflows.

Microsoft Administering Information Security in Microsoft 365 Sample Questions (Q143-Q148):

NEW QUESTION # 143

You have a Microsoft 365 tenant

You need to create a new sensitive info type for items that contain the following:

- * An employee ID number that consists of the hire date of the employee followed by a three digit number
 - * The words "Employee", "ID", or "Identification" within 300 characters of the employee ID number
- What should you use for the primary and secondary elements? To answer, select the appropriate options in the answer area NOTE: Each correct selection is worth one point

Answer:

Explanation:

Explanation:

NEW QUESTION # 144

You need to create a retention policy to delete content after seven years from the following locations:

- * Exchange Online email
- * SharePoint Online sites
- * OneDrive accounts
- * Microsoft 365 Groups
- * Teams channel messages
- * Teams chats

What is the minimum number of retention policies that you should create?

- A. 0
- B. 1
- **C. 2**
- D. 3

Answer: C

Explanation:

for each of the following you can have a retention policy

- 1.EXO, SPO, ODFB, M365 groups
- 2.Teams channel messages, teams chat
- 3.Teams private channel messages

NEW QUESTION # 145

You have a Microsoft 365 E5 subscription.

You need to identify documents that contain patent application numbers containing the letters PA followed by eight digits, for example, PA 12345678. The solution must minimize administrative effort.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: Since you are looking for a specific pattern (PA followed by eight digits, e.g., PA 12345678), the best classification method is Sensitive Info Type. Sensitive Info Types allow pattern-based matching to identify structured data. Exact Data Match (EDM) is not needed because you're not comparing against a fixed dataset.

Trainable classifier is not appropriate because this is a structured pattern, not an unstructured document classification.

Box 2: Since PA 12345678 follows a structured pattern, the most effective method is Regular Expression (Regex). A Regular Expression (Regex) can be written to match "PA" followed by exactly eight digits (e.g., PA\d{8}). Keyword dictionary is not ideal because it works for predefined words, not number patterns.

Function is unnecessary because there is no need for checksum validation or predefined validation rules.

NEW QUESTION # 146

Hotspot Question

You have a Microsoft 365 E5 subscription that uses Microsoft Purview and just-in-time (JIT) protection. The subscription contains the users shown in the following table.

The subscription contains the devices shown in the following table.

The devices contain the files shown in the following table.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Statement 1 - No. User1 is included in JIT protection. File1.docx is on Device1, which is onboarded to Microsoft Defender.

However, File1.docx has not been evaluated for file classification, meaning JIT cannot enforce protection on it. If User2 signs in to Device2 and attempts to attach File2.pdf to an email, JIT will block the action.

Statement 2 - No. User2 is not configured for JIT protection (JIT does not apply to them).

File2.pdf has been evaluated for classification, but since User2 is not included in JIT protection, no blocking occurs. If User3 attempts to copy File3.xlsx to a network share, JIT will generate an audit event.

Statement 3 - No. User3 is included in JIT protection. However, Device3 is not onboarded to Microsoft Defender, meaning JIT protection cannot enforce actions on it. File3.xlsx has not been evaluated, so even if the device were onboarded, JIT would not have classification data to act upon.

NEW QUESTION # 147

You have a Microsoft 365 E5 subscription that contains a user named User1. You deploy Microsoft Purview Data Security Posture Management for AD (DSPM for AD). You need to ensure that User1 can verify the auditing status of the subscription. The solution must follow the principle of least privilege. To which role group should you add User1?

- A. Security Reader
