

Es ist keine Neuheit, dass die Schulungsunterlagen zur AVIXA CTS von DeutschPrüfung guten Ruf von den Kandidaten gewinnen. Das heißt auch, dass die Schulungsunterlagen zur AVIXA CTS Zertifizierungsprüfung zuverlässig sind und den Kandidaten eher zum Bestehen der Prüfung verhelfen. DeutschPrüfung ist immer der Best-Seller im Vergleich mit den anderen Websites. Er wird von den anderen anerkannt und hat einen guten Ruf. Wenn Sie sich an der AVIXA CTS Zertifizierungsprüfung beteiligen wollen, wählen Sie

doch DeutschPrüfung. Sie werden sicher bekommen, was Sie wollen. Wenn Sie keine Chance verpassen möchten, würden Sie auch nicht bereuen. Wenn Sie ein professioneller IT-Expert werden wollen, schicken DeutschPrüfung in den Warenkorb.

AVIXA Certified Technology Specialist CTS Prüfungsfragen mit Lösungen (Q68-Q73):

68. Frage

Which document identifies who is responsible for each part of the system delivery, including schedule and scope?

- A. Statement of work
- B. Project charter
- **C. Responsibility matrix**
- D. Scope of work

Antwort: C

Begründung:

A Responsibility Matrix (also called RACI) outlines who is responsible, accountable, consulted, and informed for each project task or deliverable. It helps eliminate ambiguity and aligns team expectations.

"A responsibility matrix details task ownership and accountability across stakeholders-essential for project clarity."

- CTS Exam Guide, Project Management Documentation

69. Frage

A university has equipped all of its theatres with laser projectors. The maintenance department should schedule

- **A. cleaning and focus checks every six months.**
- B. remote monitoring and replace equipment at end of life.
- C. lamp and filter changes every six months.
- D. no inspections, as they are maintenance free and replace equipment at end of life.

Antwort: A

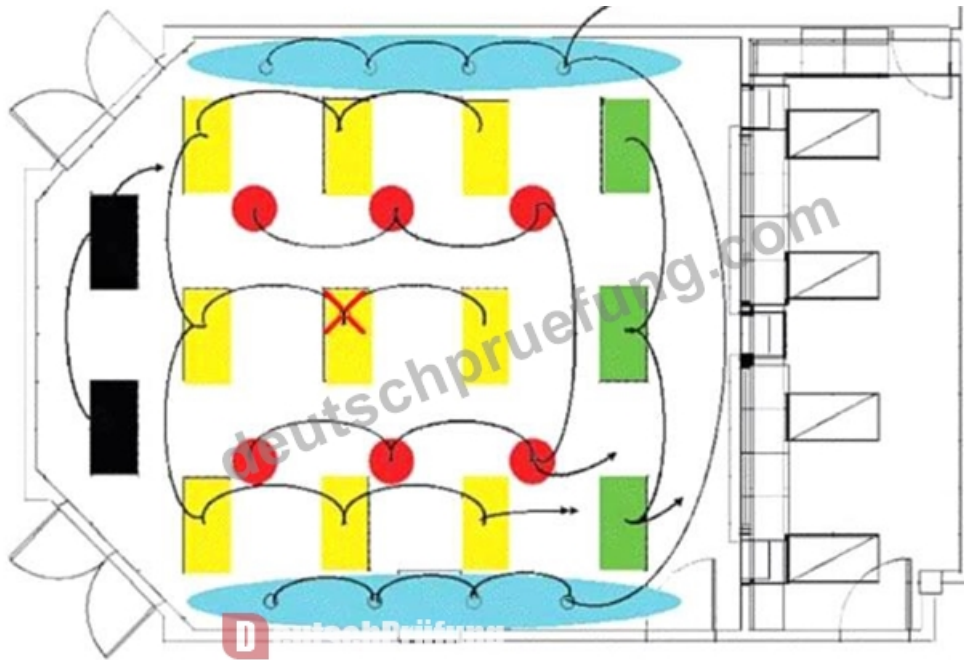

Begründung:

While laser projectors generally require less maintenance than lamp-based projectors, they still benefit from routine cleaning and focus checks every six months. Dust accumulation can affect performance, and regular inspections ensure optimal image quality and longevity.

CTS Technology Specialist ReferenceThe CTS curriculum suggests periodic maintenance for all types of projectors to maintain image quality and prolong equipment life, even for low-maintenance options like laser projectors.

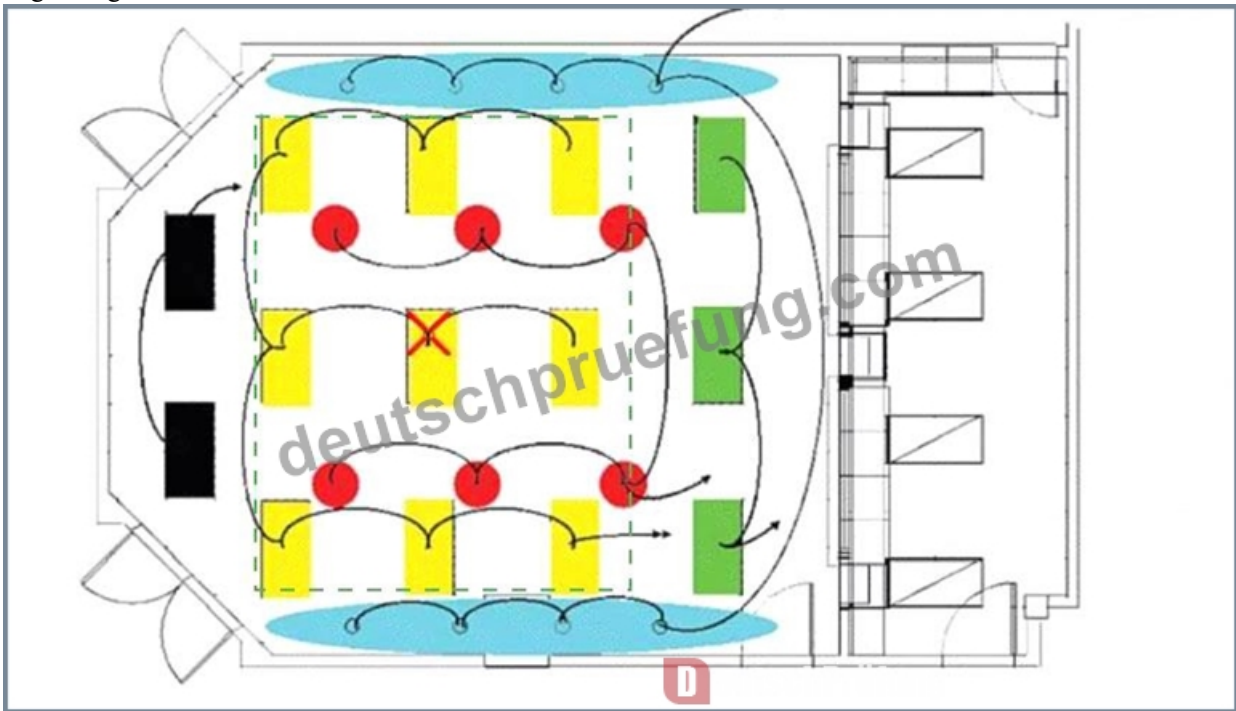

70. Frage

The video conferencing suite shown has a large conference table centered in the room. Dimming which of the COLORED zones would tend to decrease facial shadows? Select the answer by clicking on any light fixture within a zone.

Antwort:

Begründung:

Explanation:

Yellow-colored zones (any light fixture within the yellow zones directly above the seating area).

In video conferencing, balanced and well-placed lighting is crucial for achieving good facial visibility and reducing harsh shadows. Overhead lights can cast shadows on participants' faces, particularly under the eyes and nose, which can detract from a professional appearance on camera. By dimming lights directly above (in this case, the yellow zones), you reduce the intensity of the light falling straight down onto faces, softening shadows and creating more even lighting.

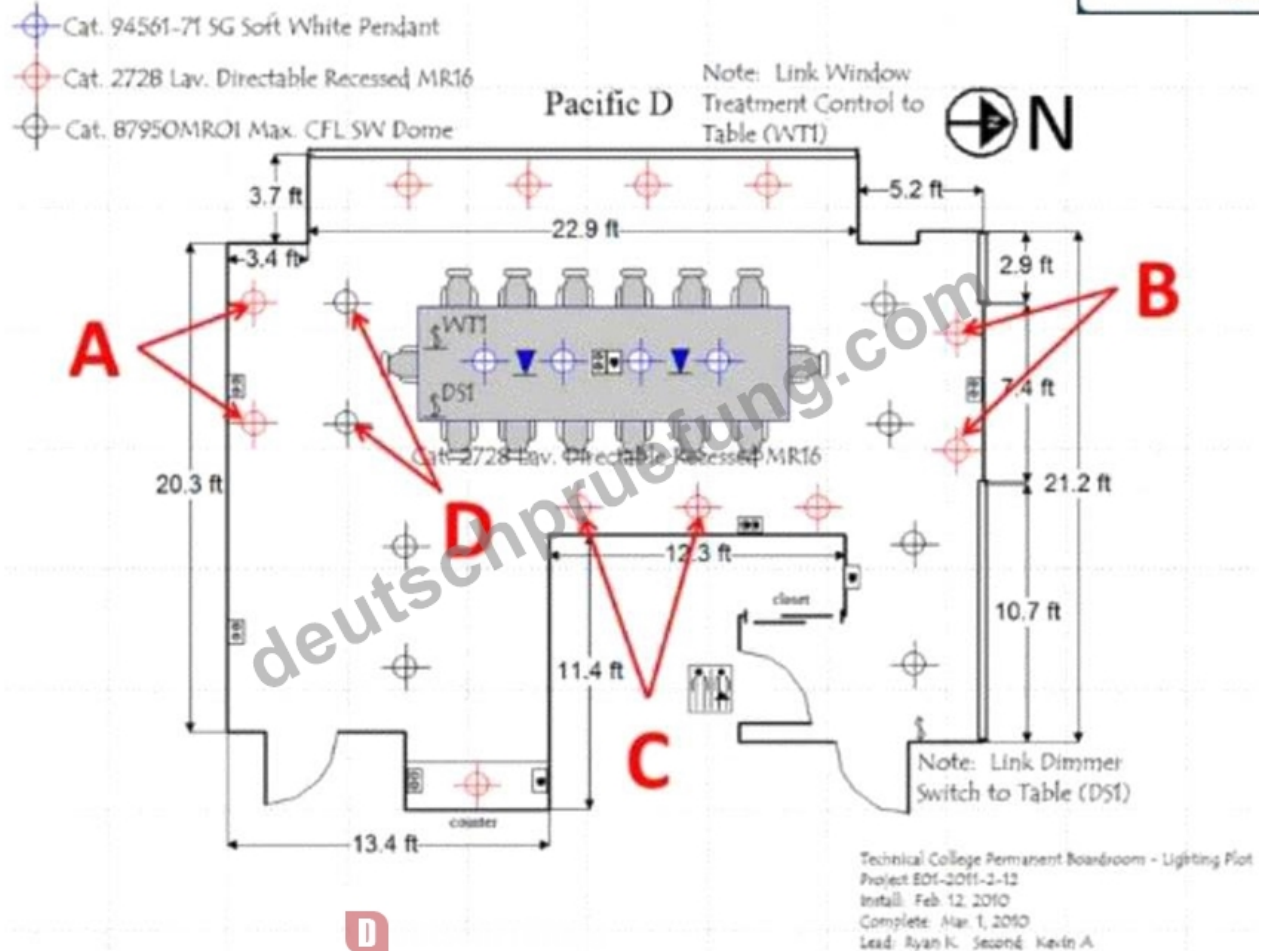

Dimming lights in the green or blue zones would be less effective, as they are positioned at the perimeter of the room and provide indirect lighting that does not directly influence facial shadows over the conference table.

71. Frage

Your client has requested a 50inch monitor be mounted on the south wall of this boardroom. Which two recessed lights will need to

be separated into the r own zone in order to turn them off when the monitor is on?

- A. B.
- **B. D**
- C. C
- D. A

Antwort: B

Begründung:

For mounting a 50-inch monitor on the south wall of the boardroom, recessed lights labeled as D will need to be separated into their own zone to turn them off when the monitor is on. This will prevent glare and reflections on the screen, ensuring a clear and visible display. Axis Technology Specialist documentation supports the necessity of proper lighting control in AV installations to optimize viewing conditions.

72. Frage

The FIRST step in troubleshooting an AV system is to

- A. ensure that all the system components have power.
- **B. clearly identify the failure symptoms.**
- C. change only one component at a time.
- D. divide the system in half to identify the portion that is not working.

Antwort: B

Begründung:

The first step in any troubleshooting process is to clearly identify the failure symptoms to understand the nature and extent of the issue. This step is critical as it guides the entire troubleshooting process by providing a clear description of the problem. CTS Technology Specialist ReferenceCTS materials on troubleshooting stress the importance of identifying symptoms accurately before proceeding to diagnostics, which helps in forming a systematic approach to problem-solving.
