Cisco Supporting Cisco Devices for Field Technicians Sample Questions (Q18-Q23):

NEW QUESTION # 18

Drag and drop the steps of the boot sequence process of a Cisco device into order on the right.

Answer:

Explanation:

Explanation:

Step 1 # Performs power-on self-test (POST)

Step 2 # Loads and runs bootstrap code (firmware)

Step 3 # Finds and loads the Cisco IOS software

Step 4 # Finds and loads the configuration

Step 5 # Runs the configured Cisco IOS software

This startup process is thoroughly described in the FLDTEC course and aligns with Cisco's standard IOS boot process:

* **POST (Power-On Self-Test):** Verifies hardware functionality including memory and interfaces. This occurs immediately upon powering the device.

* **Bootstrap Code Execution:** Bootstrap is a small program in ROM that initiates the boot process.

* **Cisco IOS Loading:** Bootstrap locates and loads the IOS from flash memory or another source (e.g., TFTP).

* **Configuration Loading:** The router then loads the startup-config from NVRAM (if available).

* **IOS Execution:** Once the configuration is loaded, the device enters operational mode and executes the IOS with the loaded config. This sequence is vital for field technicians to understand for troubleshooting boot failures or performing device recoveries.

NEW QUESTION # 19

Refer to the exhibit.

```
Router# [REDACTED]
NAME: "Chassis", DESCR: "Cisco ISR4451-X/K9"
PID: ISR4451-X/K9, VID: V01, SN: FCW2134L0SH
```

Refer to the exhibit. Which CLI show command identifies the serial number on a router?

- A. show version
- **B. show inventory**
- C. show platform
- D. show idprom

Answer: B

Explanation:

The show inventory command is used on Cisco devices to display detailed information about the hardware components installed, including:

Product Identifier (PID)

Serial Number (SN)

Description of the component

In the exhibit, the output clearly shows:

NAME: "Chassis", DESCR: "Cisco ISR4451-X/K9"

PID: ISR4451-X/K9, VID: V01, SN: FCW2134L0SH

This confirms that show inventory is the correct command to retrieve the serial number and hardware inventory details.

show version provides some system information and sometimes includes serial numbers, but it's not as reliable or detailed for component-level hardware info.

show idprom is not commonly used and not supported on all platforms.

show platform provides platform-specific info but not typically the serial number.

NEW QUESTION # 20

Which pod-based deployment model provides the most flexibility and scalability in a modern data center topology?

- **A. Spine-and-Leaf**
- B. Top of Rack (ToR)
- C. Fabric Extender model
- D. End of Row (EoR)

Answer: A

Explanation:

The Spine-and-Leaf architecture is the preferred pod-based deployment model in modern data centers because of its high scalability and flexibility. In this topology:

* Leaf switches connect to servers and act as the access layer.

* Spine switches function as the core layer, interconnecting all leaf switches.

This non-blocking, highly redundant model supports predictable latency, easy horizontal scaling, and load balancing, making it ideal for cloud-scale and virtualized environments.

* Top of Rack (ToR) and End of Row (EoR) are physical cabling layouts that do not inherently provide the same level of architectural scalability.

* Fabric Extender models extend switch ports but depend on upstream switches for intelligence, limiting flexibility.

NEW QUESTION # 21

Which two cloud computing services are vendor-managed in an Infrastructure as a Service (IaaS) delivery model? (Choose two.)

- A. Applications
- B. Data
- C. Operating System

- D. Networking
- E. Storage

Answer: D,E

Explanation:

In the Infrastructure as a Service (IaaS) model, the cloud provider is responsible for managing and maintaining the underlying infrastructure components, including:

- * Networking: The cloud provider handles all aspects of network configuration, hardware, and virtual networking.
- * Storage: The cloud provider supplies and manages the physical and virtual storage infrastructure required to support the consumer's data needs.

The customer is responsible for managing:

- * Operating Systems
- * Applications
- * Data

This model offers flexibility while shifting infrastructure maintenance responsibilities to the service provider.

NEW QUESTION # 22

Which step must be performed immediately after powering off the device when replacing a Cisco chassis?

- A. Remove the chassis.
- B. Back up the device configuration.
- C. Label and remove all I/O cables.
- D. Remove the chassis ground.

Answer: C

Explanation:

After powering off a Cisco device in preparation for chassis replacement, the immediate next steps are to label and remove all I/O cables. This step is crucial to ensure that all connections can be accurately restored after the new chassis is installed.

Proper labeling prevents confusion and potential misconfigurations during reassembly. Only after all cables are safely disconnected should you proceed to remove the chassis ground and then the chassis itself.
