Quiz Salesforce - High-quality Plat-Arch-201 - Technical Salesforce Certified Platform Data Architect Training

The exam time is coming, while you are not prepared well for Plat-Arch-201 real test. Please do not be tense and worried, you can pass your Plat-Arch-201 actual exam very simply and easily with DumpsKing Plat-Arch-201 free pdf dumps. With the help of Salesforce Plat-Arch-201 free pdf practice, you can not only get high score in your actual test, but also can get more technology knowledge and be more professional.

Salesforce Certified Platform Data Architect Sample Questions (Q182-Q187):

NEW QUESTION # 182

UC is planning a massive SF implementation with large volumes of data. As part of the org's implementation, several roles, territories, groups, and sharing rules have been configured. The data architect has been tasked with loading all of the required data,

including user data, in a timely manner. What should a data architect do to minimize data load times due to system calculations?

- A. Load the data through data loader, and turn on parallel processing.
- B. Leverage the Bulk API and concurrent processing with multiple batches
- **C. Enable defer sharing calculations, and suspend sharing rule calculations**
- D. Enable granular locking to avoid "UNABLE_TO_LOCK_ROW" error.

Answer: C

Explanation:

The correct answer is A, enable defer sharing calculations, and suspend sharing rule calculations. Defer sharing calculations and suspend sharing rule calculations are features that allow you to temporarily disable the automatic recalculation of sharing rules when you load large volumes of data. This can improve the performance and speed of your data load process by avoiding unnecessary system calculations. Loading the data through data loader, leveraging the bulk API, or enabling granular locking are also options that can help with data load times, but they do not directly address the system calculations issue.

NEW QUESTION # 183

A large Automobile company has implemented SF for its Sales Associates. Leads flow from its website to SF using a batch integration in SF. The Batch job connects the leads to Accounts in SF. Customer visiting their retail stores are also created in SF as Accounts.

The company has noticed a large number of duplicate accounts in SF. On analysis, it was found that certain customers could interact with its website and also visit the store. The Sales associates use Global Search to search for customers in Salesforce before they create the customers.

Which scalable option should a data Architect choose to implement to avoid duplicates?

- A. Customize Account creation process to search if customer exists before creating an Account.
- B. Implement a MDM solution to validate the customer information before creating Accounts in SF.
- C. Build Custom search based on fields on Accounts which can be matched with customer when they visit the store
- **D. Create duplicate rules in SF to validate duplicates during the account creation process**

Answer: D

Explanation:

The data architect should choose to implement duplicate rules in SF (Salesforce) to validate duplicates during the account creation process. Duplicate rules are a feature in Salesforce that allow users to define criteria and actions for detecting and preventing duplicate records. By creating duplicate rules for accounts, the data architect can ensure that any leads from the website or customers from the retail stores that match existing accounts in Salesforce are flagged or blocked before they are created as new accounts. This will help avoid duplicate accounts in Salesforce and maintain data quality.

NEW QUESTION # 184

Northern Trail Outfitters (NTO) wants to implement backup and restore for Salesforce data, Currently, it has data backup processes that runs weekly, which back up all Salesforce data to an enterprise data warehouse (EDW). NTO wants to move to daily backups and provide restore capability to avoid any data loss in case of outage. What should a data architect recommend for a daily backup and restore solution?

- A. Use ETL for backup and restore from EDW.
- **B. Use AppExchange package for backup and restore.**
- C. Change weekly backup process to daily backup, and implement a custom restore solution.
- D. Use Bulk API to extract data on daily basis to EDW and REST API for restore.

Answer: B

Explanation:

The data architect should recommend using AppExchange package for backup and restore.

AppExchange is a marketplace for Salesforce apps and solutions that can be installed and configured in Salesforce orgs. There are several AppExchange packages that provide backup and restore functionality for Salesforce data, such as OwnBackup, Odaseva, or Spanning. These packages can perform daily backups of Salesforce data to a secure cloud storage, and provide restore capability to avoid any data loss in case of outage.

NEW QUESTION # 185

North Trail Outfitters (NTD) is in the process of evaluating big objects to store large amounts of asset data from an external system. NTO will need to report on this asset data weekly. Which two native tools should a data architect recommend to achieve this reporting requirement?

- A. Async SOQL with a custom object
- B. Standard SOQL queries
- C. Standard reports and dashboards
- D. Einstein Analytics

Answer: A,D

Explanation:

Async SOQL with a custom object (option B) and Einstein Analytics (option D) are the two native tools that can be used to report on big object data. Async SOQL allows querying big object data and storing the results in a custom object, which can then be used for reporting. Einstein Analytics can connect to big object data sources and provide advanced analytics and visualization features.

NEW QUESTION # 186

Universal Containers (UC) has implemented Salesforce, UC is running out of storage and needs to have an archiving solution, UC would like to maintain two years of data in Salesforce and archive older data out of Salesforce. Which solution should a data architect recommend as an archiving solution?

- A. Build a batch job to move two-year-old records off platform, and delete records from Salesforce.
- B. Use a third-party backup solution to backup all data off platform.
- C. Build a batch job to move all records off platform, and delete all records from Salesforce.
- D. Build a batch job to move all records off platform, and delete old records from Salesforce.

Answer: A

Explanation:

The data architect should recommend building a batch job to move two-year-old records off platform, and delete records from Salesforce as an archiving solution. A batch job is a process that runs in the background and performs operations on large volumes of data in Salesforce. By building a batch job that moves two-year-old records off platform to an external storage system, such as Amazon S3 or Google Cloud Storage, and deletes them from Salesforce, the data architect can reduce the storage consumption and improve the performance of Salesforce org.

NEW QUESTION # 187

.....

Three formats of our study material are Salesforce Plat-Arch-201 PDF Questions, Desktop Practice Test Software, and a Web-Based Practice Exam. We understand that the learning style of every Salesforce Certified Platform Data Architect (Plat-Arch-201) exam applicant is different. Therefore, we offer three formats of Plat-Arch-201 Practice Test material. Now every Salesforce Certified Platform Data Architect (Plat-Arch-201) exam candidate can prepare as per his style by selecting the suitable format.

Exam Plat-Arch-201 Assessment: <https://www.dumpsking.com/Plat-Arch-201-testking-dumps.html>

Salesforce Technical Plat-Arch-201 Training We can meet your different needs, This format follows the current content of the Salesforce Plat-Arch-201 real certification exam, Questions of this Salesforce Certified Platform Data Architect (Plat-Arch-201) mock test closely resemble the format of the actual test, Salesforce Technical Plat-Arch-201 Training 100% latest actual exam questions with 100% accurate answers, We monitor Salesforce Plat-Arch-201 exam weekly and update as soon as new questions are added.

But know that the IoT isn't limited to just personal devices, Plat-Arch-201 Clearly, being a small business has had some pretty significant advantages, We can meet your different needs.

This format follows the current content of the Salesforce Plat-Arch-201 real certification exam, Questions of this Salesforce Certified Platform Data Architect (Plat-Arch-201) mock test closely resemble the format of the actual test.
