# New JN0-224 Practice Materials & JN0-224 Practice Online

We all want to be the people who are excellent and respected by others with a high social status. If you want to achieve that you must boost an authorized and extremely useful JN0-224 certificate to prove that you boost good abilities and plenty of knowledge in some area. Passing the test JN0-224 Certification can help you realize your goal and if you buy our JN0-224 latest torrent you will pass the JN0-224 exam successfully. You can just free download the demo of our JN0-224 exam questions to have a check the excellent quality.

We indeed have the effective JN0-224 Exam Braindumps, and we can ensure that you will pass it. Some candidates may have the concern that the safety of the money. We use the third party that is confirmed in the international market, it will protect the safety of your fund. If you find that your interest and service didn't get full achieved, you can apply for the charge back, and the third party will guarantee the implement of your interest. Besides, if you fail the exam, we will also have money back to you payment account.

100% Pass Quiz 2026 JN0-224: The Best New Automation and DevOps, Associate (JNCIA-DevOps) Practice Materials

Laziness will ruin your life one day. It is time to have a change now. Although we all love cozy life, we must work hard to create our own value. Then our JN0-224 study materials will help you overcome your laziness. Study is the best way to enrich your life. Our JN0-224 study materials are suitable for various people. No matter you are students, office workers or common people, you can have a try. In addition, you can take part in the JN0-224 Exam if you finish all learning tasks. The certificate issued by official can inspire your enthusiasm.

Juniper Automation and DevOps, Associate (JNCIA-DevOps) Sample Questions (Q51-Q56):

NEW QUESTION # 51
Which statement about the NETCONF content layer is true?

- A. It uses JSON for RPC request and response payloads.
- B. It uses XML for RPC request and response payloads.
- C. It uses HTML for RPC request and response payloads.
- D. It uses YAML for RPC request and response payloads.

Answer: B

Explanation:
The NETCONF protocol, used for network management, utilizes XML for encoding the RPC (Remote Procedure Call) requests and responses. XML is chosen because of its flexibility and ability to represent hierarchical data structures, making it well-suited for representing network configurations and states.
Option B is correct because XML is the standard format used for NETCONF RPC payloads.

Options A (YAML), C (JSON), and D (HTML) are incorrect because these formats are not used by NETCONF for its RPC payloads.
Supporting Reference:
RFC 6241 - NETCONF Protocol: This RFC describes the use of XML for encoding NETCONF messages.

NEW QUESTION # 52
You are asked to write an on-box script that will be triggered when a specific interface on a Junos device goes down.
Which type of on-box script should you use to accomplish this task?

- A. SNMP
- B. commit
- C. event
- D. operation

Answer: C

Explanation:
An event script is used to automate responses to system events in Junos, such as an interface going down. These scripts are triggered automatically when a specified event occurs, making them suitable for tasks like monitoring interface status and executing actions when the status changes.
Option B (event) is correct because event scripts are designed for reacting to system events like an interface going down.
Option A (commit) is used for configuration changes, Option C (operation) is used for operational tasks, and Option D (SNMP) is not applicable in this context.
Supporting Reference:
Juniper Networks Event Scripts Documentation: Details how event scripts are used to automate responses to specific system events in Junos

NEW QUESTION # 53
Junos PyEZ tables are formatted using which file type?

- A. YAML
- B. SON
- C. txt
- D. IXML

Answer: A

Explanation:
Junos PyEZ uses YAML (YAML Ain't Markup Language) files to define the format for tables and views when working with operational and configuration data. YAML is a human-readable data format that is commonly used for configuration files, making it suitable for defining data structures in PyEZ.
Option B (YAML) is correct because PyEZ tables are defined using YAML files.
Options A (JSON), C (txt), and D (IXML) are incorrect in this context, as YAML is the standard format used.
Supporting Reference:
Junos PyEZ Tables Documentation: Explains the use of YAML files for formatting tables and views in Junos PyEZ.

NEW QUESTION # 54
Which two statements are correct about the Junos REST API Explorer? (Choose two.)

- A. The REST API Explorer supports both GET and POST calls.
- B. The REST API Explorer returns data only in XML format.
- C. The REST API Explorer supports multiple RPC calls.
- D. The REST API Explorer is enabled by default on all Junos devices.

Answer: A,C

Explanation:
The Junos REST API Explorer provides an interactive environment to explore and execute REST API calls. The correct statements

are:

Supports GET and POST Calls (C): The REST API Explorer allows users to make both GET and POST requests, enabling retrieval and submission of data to the Junos device.

Supports Multiple RPC Calls (D): The REST API Explorer can execute multiple RPC (Remote Procedure Call) commands, allowing a wide range of operations to be performed directly through the interface.

Option A is incorrect because the REST API Explorer is not enabled by default; it must be enabled manually. Option B is incorrect because the REST API Explorer returns data in both XML and JSON formats, not just XML.

Reference:

Junos REST API Explorer Documentation: Provides details on the supported operations and how to use the Explorer for different types of requests.

Juniper Networks Documentation: Covers the setup and usage of the REST API Explorer.

NEW QUESTION # 55

What is the difference between a list and a tuple in Python?

- **A. Lists are mutable objects that use square brackets, and tuples are immutable objects that use parentheses.**
- B. Lists are immutable objects that use square brackets, and tuples are mutable objects that use parentheses.
- C. Lists are mutable objects that use parentheses, and tuples are immutable objects that use square brackets.
- D. Lists are immutable objects that use parentheses, and tuples are immutable objects that use square brackets.

Answer: A

Explanation:

In Python, the distinction between lists and tuples is essential for efficient programming:

Lists:

Mutable (B): This means that once a list is created, its elements can be changed, added, or removed. Lists are versatile and commonly used when the data is expected to change.

Square Brackets: Lists are defined using square brackets [].

Example:

my_list = [1, 2, 3]

my_list[0] = 10 # Modifying the first element

Tuples:

Immutable (B): Once a tuple is created, it cannot be altered. Tuples are used when a fixed collection of items is needed, providing more integrity to the data.

Parentheses: Tuples are defined using parentheses ().

Example:

my_tuple = (1, 2, 3)

my_tuple[0] = 10 # This would raise an error because tuples are immutable Reference:

Python Official Documentation: The Python Language Reference provides detailed information on data types like lists and tuples, including their mutability and syntax.

Automation Scripts: In the context of automation, understanding when to use mutable or immutable data structures can significantly impact script performance and reliability.

NEW QUESTION # 56

......

There may be customers who are concerned about the installation or use of our JN0-224 training questions. You don't have to worry about this if you have any of this kind of trouble. In addition to high quality and high efficiency of our JN0-224 Exam Questions, considerate service is also a big advantage of our company. We will provide 24 - hour online after-sales service to every customer to help them solve problems on our JN0-224 learning guide.
