EMC Dell PowerProtect Data Manager Deploy 2023 Exam Sample Questions

(Q66-Q71):

NEW QUESTION # 66

Which cloud services provider can be used to deploy PowerProtect Data Manager?

- A. Google Cloud Platform
- B. Oracle Cloud Infrastructure
- C. Alibaba Cloud
- D. IBM Cloud

Answer: A

Explanation:

Dell PowerProtect Data Manager is designed to provide consistent data protection across on-premises, hybrid, and multi-cloud environments. To facilitate this, PPDM supports deployment in major public cloud infrastructure providers.

* Supported Cloud Providers: PowerProtect Data Manager can be deployed as a virtual appliance in Amazon Web Services (AWS), Microsoft Azure, and Google Cloud Platform (GCP).

* Deployment Methods: In these environments, PPDM can be deployed using a machine image available directly from the respective cloud provider's marketplace. For instance, in GCP, you can search for and deploy PowerProtect Data Manager from the Google Cloud Marketplace, which simplifies the initial setup and ensures the virtual machine is correctly sized for the workload.

* Integrated Protection: When deployed in the cloud, PPDM typically works alongside PowerProtect DD Virtual Edition (DDVE) to provide deduplicated protection storage for cloud-native assets like VMs, databases, and Kubernetes clusters running within that same cloud region.

Other providers like IBM Cloud, Oracle Cloud, or Alibaba Cloud are not currently listed as supported deployment platforms for the PPDM appliance in the official Dell PowerProtect Data Manager Deployment Guide.

NEW QUESTION # 67

Which settings are critical when upgrading PowerProtect Data Manager to ensure continuity?

(Choose two)

Response:

- A. Deleting all previous logs
- B. Maintaining the current network configuration
- C. Confirming sufficient system resources
- D. Clearing data deduplication settings

Answer: B,C

NEW QUESTION # 68

Which factor is crucial when backing up databases like MS-SQL with PowerProtect Data Manager?

- A. The version of the MS-SQL server
- B. The network speed between the database server and backup storage
- C. The size of the database transaction log
- D. Ensuring minimal CPU usage during backup

Answer: A

Explanation:

When integrating Microsoft SQL Server with PowerProtect Data Manager, the most foundational requirement for a successful deployment is ensuring compatibility between the Microsoft Application Agent and the database engine.

* Version Compatibility: PPDM supports specific versions of MS-SQL (e.g., 2012, 2014, 2016, 2017, 2019, 2022). Each version has specific service pack requirements and underlying VSS (Volume Shadow Copy Service) writer behaviors that the PPDM agent must interact with to ensure application-consistent backups.

* Feature Support: Certain advanced features, such as SQL Always On Availability Groups (AG) or specific recovery models, vary in support and configuration steps based on the MS-SQL version.

* Pre-requisites: Before installing the agent, administrators must verify the version against the Dell PowerProtect Data Manager Interoperability Matrix. An unsupported version may result in failed discovery, inability to trigger VSS snapshots, or metadata corruption.

NEW QUESTION # 69

In the context of Kubernetes integration, what does PowerProtect Data Manager primarily protect?

- A. Network settings
- B. Container images
- C. Persistent volumes
- D. Node configurations

Answer: C

NEW QUESTION # 70

Which two ports must be open for bi-directional communication between the Reporting Engine and PowerProtect Data Manager?

- A. 0
- B. 1
- C. 2
- D. 3
- E. 4

Answer: D,E
