CompTIA Practice PT0-003 Exam: CompTIA PenTest+ Exam - Itcertkey 100% Pass Rate Offer

CompTIA PT0-003 Exam provided by Itcertkey is of the highest quality, and it enables participants to pass the exam on their first try. For successful preparation, it is essential to have good CompTIA PT0-003 exam dumps and to prepare questions that may come up in the exam. Itcertkey helps candidates overcome all the difficulties they may encounter in their exam preparation. To ensure the candidates' satisfaction, Itcertkey has a support team that is available 24/7 to assist with a wide range of issues.

With the help of the CompTIA PT0-003 brain dumps and preparation material provided by Itcertkey, you will be able to get CompTIA CompTIA PenTest+ certified at the first attempt. Our CompTIA experts have curated an amazing PT0-003 exam guide for passing the PT0-003 Exam. You can get the desired outcome by preparing yourself from the PT0-003 exam dumps material provided by Itcertkey. We frequently update our PT0-003 exam preparation material to reflect the latest changes in the PT0-003 exam syllabus.

>> Practice PT0-003 Exam <<

Perfect Practice PT0-003 Exam & Excellent CompTIA Certification Training - Excellent CompTIA CompTIA PenTest+ Exam

In this hustling society, our PT0-003 study guide is highly beneficial existence which can not only help you master effective knowledge but pass the PT0-003 exam effectively. They have a prominent role to improve your soft-power of personal capacity and boost your confidence of conquering the exam with efficiency. As there are all keypoints in the PT0-003 Practice Engine, it is easy to master and it also helps avoid a waste of time for selecting main content.

CompTIA PenTest+ Exam Sample Questions (Q195-Q200):

NEW QUESTION # 195
During a security audit, a penetration tester wants to run a process to gather information about a target network's domain structure and associated IP addresses. Which of the following tools should the tester use?

- A. Nmap
- B. Netcat
- C. Dnsenum
- D. Wireshark

Answer: C

Explanation:
Dnsenum is a tool specifically designed to gather information about DNS, including domain structure and associated IP addresses.
Dnsenum: This tool is used for DNS enumeration and can gather information about a domain's DNS records, subdomains, IP addresses, and other related information. It is highly effective for mapping out a target network's domain structure.
Nmap: While a versatile network scanning tool, Nmap is more focused on port scanning and service detection rather than detailed DNS enumeration.
Netcat: This is a network utility for reading and writing data across network connections, not for DNS enumeration.
Wireshark: This is a network protocol analyzer used for capturing and analyzing network traffic but not specifically for gathering DNS information.

NEW QUESTION # 196
A penetration tester initiated the transfer of a large data set to verify a proof-of-concept attack as permitted by the ROE. The tester noticed the client's data included PII, which is out of scope, and immediately stopped the transfer. Which of the following MOST likely explains the penetration tester's decision?

- A. The tester had the situational awareness to stop the transfer.
- B. The tester found evidence of prior compromise within the data set.
- C. The tester completed the assigned part of the assessment workflow.
- D. The tester reached the end of the assessment time frame.

Answer: A

Explanation:
Situational awareness is the ability to perceive and understand the environment and events around oneself, and to act accordingly.
The penetration tester demonstrated situational awareness by stopping the transfer of PII, which was out of scope and could have violated the ROE or legal and ethical principles. The other options are not relevant to the situation or the decision of the penetration tester.

NEW QUESTION # 197
You are a penetration tester reviewing a client's website through a web browser.
INSTRUCTIONS
Review all components of the website through the browser to determine if vulnerabilities are present.
Remediate ONLY the highest vulnerability from either the certificate, source, or cookies.
If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.

NEW QUESTION # 198

A penetration tester is testing a power plant's network and needs to avoid disruption to the grid. Which of the following methods is most appropriate to identify vulnerabilities in the network?

- A. Configure a network scanner engine and execute the scan.
- B. Execute a testing framework to validate vulnerabilities on the devices.
- C. Run a network mapper tool to get an understanding of the devices.
- D. Configure a port mirror and review the network traffic.

Answer: D

Explanation:

When testing a power plant's network and needing to avoid disruption to the grid, configuring a port mirror and reviewing the network traffic is the most appropriate method to identify vulnerabilities without causing disruptions.

Explanation:

* Port Mirroring:

* Definition: Port mirroring (SPAN - Switched Port Analyzer) is a method of monitoring network traffic by duplicating packets from one or more switch ports to another port where a monitoring device is connected.

* Purpose: Allows passive monitoring of network traffic without impacting network operations or device performance.

* Avoiding Disruption:

* Non-Intrusive: Port mirroring is non-intrusive and does not generate additional traffic or load on the network devices, making it suitable for sensitive environments like power plants where disruption is not acceptable.

* Other Options:

* Network Scanner Engine: Active scanning might disrupt network operations or devices, which is not suitable for critical infrastructure.

* Testing Framework: Validating vulnerabilities on devices might involve active testing, which can be disruptive.

* Network Mapper Tool: Running a network mapper tool (like Nmap) actively scans the network and might disrupt services.

Pentest References:

* Passive Monitoring: Passive techniques such as port mirroring are essential in environments where maintaining operational integrity is critical.
* Critical Infrastructure Security: Understanding the need for non-disruptive methods in critical infrastructure penetration testing to ensure continuous operations.
By configuring a port mirror and reviewing network traffic, the penetration tester can identify vulnerabilities in the power plant's network without risking disruption to the grid.

NEW QUESTION # 199

During a penetration test, a tester compromises a Windows computer. The tester executes the following command and receives the following output:
mimikatz # privilege::debug
mimikatz # lsadump::cache
---Output---
lapsUser
27dh9128361tsg2459210138754ij
---OutputEnd---
Which of the following best describes what the tester plans to do by executing the command?

- A. The tester plans to collect the ticket information from the user to perform a Kerberoasting attack on the domain controller.
- B. The tester plans to collect application passwords or hashes to compromise confidential information within the local computer.
- C. The tester plans to perform the first step to execute a Golden Ticket attack to compromise the Active Directory domain.
- D. The tester plans to use the hash collected to perform lateral movement to other computers using a local administrator hash.

Answer: D

Explanation:
The tester is using Mimikatz to dump cached credentials from Local Security Authority (LSA) memory.
Pass-the-Hash (Option C):
The tester extracts cached credentials to authenticate without cracking passwords.
Pass-the-Hash (PtH) allows lateral movement by reusing the NTLM hash on other systems.
Reference: CompTIA PenTest+ PT0-003 Official Study Guide - "Post-Exploitation Techniques in Windows" Incorrect options:
Option A (Golden Ticket attack): Requires KRBTGT ticket creation, not cached credentials.
Option B (Collect application passwords): Cached hashes are not application-specific.
Option D (Kerberoasting): Kerberoasting targets Service Principal Names (SPNs), not cached credentials.

NEW QUESTION # 200

......

Itcertkey is responsible for our PT0-003 study materials. Every exam product of Itcertkey have sold to customer will enjoy considerate after-sales service. If you have problems about our PT0-003 study materials such as installation, operation and so on, we will quickly reply to you after our online workers have received your emails. We are not afraid of troubles. We warmly welcome to your questions and suggestions on the PT0-003 Exam Questions. We sincerely hope we can help you solve your problem and help you pass the PT0-003 exam.
