

100% Pass Quiz Authoritative Databricks - New Databricks-Certified-Data-Engineer-Professional Mock Test

The pass rate of Databricks-Certified-Data-Engineer-Professional study materials are 98.95%, if you buy Databricks-Certified-Data-Engineer-Professional study material from us, we can ensure you pass the exam successfully. Besides you can get Databricks-Certified-Data-Engineer-Professional exam dumps in ten minutes after your payment. You can use the Databricks-Certified-Data-Engineer-Professional exam dumps freely, if you have any questions in the process of your learning, you can consult the service staff, and they have the professional knowledge about Databricks-Certified-Data-Engineer-Professional Learning Materials, so don't hesitate to ask for help from them.

If you are determined to purchase our Databricks-Certified-Data-Engineer-Professional valid exam collection materials for your companies, if you pursue long-term cooperation with site, we will have some relate policy. Firstly we provide one-year service warranty for every buyer who purchased Databricks-Certified-Data-Engineer-Professional valid exam collection materials. Every buyer can share one year free updates and preparation assist. Secondly if you want to get the free updates not just for one year, you want to still get the new version of Databricks Databricks-Certified-Data-Engineer-Professional valid exam collection materials after one year, you share 50% discount for the second year.

Databricks Certified Data Engineer Professional Exam actual exam questions & Databricks-Certified-Data-Engineer-Professional valid study dumps & Databricks Certified Data Engineer Professional Exam test practice torrent

We provide three versions of Databricks-Certified-Data-Engineer-Professional study materials to the client and they include PDF version, PC version and APP online version. Different version boosts own advantages and using methods. The content of Databricks-Certified-Data-Engineer-Professional exam torrent is the same but different version is suitable for different client. For example, the PC version of Databricks-Certified-Data-Engineer-Professional study materials supports the computer with Windows system and its advantages includes that it simulates real operation exam environment and it can simulates the exam and you can attend time-limited exam on it. And whatever the version is the users can learn the Databricks-Certified-Data-Engineer-Professional Guide Torrent at their own pleasures. The titles and the answers are the same and you can use the product on the computer or the cellphone or the laptop.

Databricks Certified Data Engineer Professional Exam Sample Questions (Q108-Q113):

NEW QUESTION # 108

A transactions table has been liquid clustered on the columns `product_id`, `user_id`, and `event_date`. Which operation lacks support for cluster on write?

- A. `spark.write.format('delta').mode('append')`
- B. CTAS and RTAS statements
- C. `spark.writestream.format('delta').mode('append')`
- D. INSERT INTO operations

Answer: C

Explanation:

Delta Lake's Liquid Clustering is an advanced feature that improves query performance by dynamically clustering data without requiring costly compaction steps like traditional Z-ordering.

When performing writes to a Liquid Clustered table, some write operations automatically maintain clustering, while others do not.

NEW QUESTION # 109

A member of the data engineering team has submitted a short notebook that they wish to schedule as part of a larger data pipeline. Assume that the commands provided below produce the logically correct results when run as presented.

Get Latest & Actual Certified-Data-Engineer-Professional Exam's Question and Answers from

Which command should be removed from the notebook before scheduling it as a job?

- A. Cmd 3
- B. Cmd 4
- C. Cmd 5
- D. Cmd 6
- E. Cmd 2

Answer: D

Explanation:

When scheduling a Databricks notebook as a job, it's generally recommended to remove or modify commands that involve displaying output, such as using the `display()` function. Displaying data using `display()` is an interactive feature designed for exploration and visualization within the notebook interface and may not work well in a production job context.

The `finalDF.explain()` command, which provides the execution plan of the DataFrame transformations and actions, is often useful for debugging and optimizing queries. While it doesn't Get Latest & Actual Certified-Data-Engineer-Professional Exam's Question and Answers from display interactive visualizations like `display()`, it can still be informative for understanding how Spark is executing the operations on your DataFrame.

NEW QUESTION # 110

A data governance team at a large enterprise is improving data discoverability across its organization. The team has hundreds of tables in their Databricks Lakehouse with thousands of columns that lack proper documentation. Many of these tables were created by different teams over several years, with missing context about column meanings and business logic. The data governance team needs to quickly generate comprehensive column descriptions for all existing tables to meet compliance requirements and improve data literacy across the organization. They want to leverage modern capabilities to automatically generate meaningful descriptions rather than manually documenting each column, which would take months to complete. Which approach should the team use in Databricks to automatically generate column comments and descriptions for existing tables?

- A. Use Delta Lake's DESCRIBE HISTORY command to analyze table evolution and infer column purposes from historical changes.
- B. Use the DESCRIBE TABLE command to extract existing schema information and manually write descriptions based on column names and data types.
- C. Write custom PySpark code using `df.describe()` and `df.schema` to programmatically generate basic statistical descriptions for each column.
- D. Navigate to the table in Databricks Catalog Explorer, select the table schema view, and use the AI Generate option which leverages artificial intelligence to automatically create meaningful column descriptions based on column names, data types, sample values, and data patterns.

Answer: D

Explanation:

The Catalog Explorer provides an AI-powered "AI Generate" capability that automatically creates intelligent column descriptions by analyzing column names, data types, sample values, and observed data patterns. This approach enables rapid, scalable documentation of existing tables, significantly improving data discoverability and compliance without manual effort.

NEW QUESTION # 111

An upstream source writes Parquet data as hourly batches to directories named with the current date. A nightly batch job runs the following code to ingest all data from the previous day as indicated by the date variable:

□ Assume that the fields `customer_id` and `order_id` serve as a composite key to uniquely identify each order.

If the upstream system is known to occasionally produce duplicate entries for a single order hours apart, which statement is correct?

- A. Each write to the orders table will only contain unique records, but newly written records may have duplicates already present in the target table.
- B. Each write to the orders table will only contain unique records; if existing records with the same key are present in the target table, the operation will fail.
- C. Each write to the orders table will only contain unique records, and only those records without duplicates in the target table will be written.
- D. Each write to the orders table will run deduplication over the union of new and existing records, ensuring no duplicate records are present.
- E. Each write to the orders table will only contain unique records; if existing records with the same key are present in the target table, these records will be overwritten.

Answer: A

Explanation:

This is the correct answer because the code uses the `dropDuplicates` method to remove any duplicate records within each batch of data before writing to the orders table. However, this method does not check for duplicates across different batches or in the target table, so it is possible that newly written records may have duplicates already present in the target table. To avoid this, a better approach would be to use Delta Lake and perform an upsert operation using `mergeInto`.

NEW QUESTION # 112

A data engineer needs to design an efficient pipeline that automatically processes new CSV files as they arrive in S3 storage. Which Databricks feature should the data engineer use to meet these requirements?

- A. Traditional batch processing with scheduled Databricks Jobs
- B. Auto Loader with schema inference and evolution enabled
- C. COPY INTO SQL command with parameters to track processed files
- D. Streaming from cloud storage using standard Spark `readStream` with `format("csv")` and `format("json")`

Answer: B

Explanation:

Auto Loader is designed to efficiently and incrementally process new files as they arrive in cloud object storage. It provides scalable file discovery, supports schema inference and evolution, and minimizes overhead compared to traditional batch or manual streaming approaches.

NEW QUESTION # 113

.....

The Databricks-Certified-Data-Engineer-Professional certification is the best proof of your ability. However, it's not easy for those work officers who has less free time to prepare such an Databricks-Certified-Data-Engineer-Professional exam, and people always feel fear of the unknown thing and cannot handle themselves with a sudden change. However, our Databricks-Certified-Data-Engineer-Professional Exam Questions can stand by your side. And we are determined to devote ourselves to serving you with the superior Databricks-Certified-Data-Engineer-Professional study materials. You can have a try on the free demo of our Databricks-Certified-Data-Engineer-Professional exam questions, you can understand in detail and make a choice.
