The Open Group OGEA-101 Reliable Exam Prep, OGEA-101 Latest Exam Simulator

Our TOGAF Enterprise Architecture Part 1 Exam (OGEA-101) practice exam can be modified in terms of length of time and number of questions to help you prepare for the The Open Group real test. We're certain that our OGEA-101 Questions are quite similar to those on OGEA-101 real exam since we regularly update and refine the product based on the latest exam content.

The Open Group OGEA-101 Exam Syllabus Topics:

Topic	Details
Topic 1	• Introduction to the Architecture Development Method (ADM): The ADM is central to TOGAF, outlining a structured approach to developing and managing enterprise architecture. This section assesses comprehension of TOGAF practitioners about the ADM phases and their application, ensuring they grasp the method's iterative nature, which is vital for the OGEA-101 exam.
Topic 2	• Architecture Change Management: Focusing on managing architecture changes, this topic of the TOGAF Enterprise Architecture Part 1 exam assesses skills of practitioners in handling change requests and maintaining architecture repositories.

Topic 3	• Fundamental Concepts of Enterprise Architecture: This topic covers the definition, purpose, and benefits of enterprise architecture, emphasizing its role in aligning business objectives with IT strategies. It measures the understanding of TOGAF practitioners about foundational principles essential for effective enterprise architecture practice, crucial for passing the OGEA-101 exam.
Topic 4	• Architecture Vision: Aspiring TOGAF practitioners learn to develop an architecture vision that aligns with business goals and drivers. This topic evaluates the skills in articulating a clear and compelling vision, a necessary competency for successfully navigating the OGEA-101 exam and implementing enterprise architecture.
Topic 5	• Information Systems Architecture: Focusing on data and application architectures, this topic of the OGEA-101 Exam assesses ability of TOGAF practitioners to define and manage information systems. It measures their skills in identifying data entities and application components.
Topic 6	• Business Architecture: This topic of The Open Group OGEA-101 exam emphasizes the development of business architecture, including baseline and target architectures. It measures the understanding of TOGAF practitioners about business capabilities and processes.
Topic 7	• Architecture Content Framework: Candidates learn about the TOGAF content metamodel and architecture artifacts. This topic of the OGEA-101 exam measures their understanding of content organization and documentation.
Topic 8	• Implementation Governance: This topic of The Open Group OGEA-101 exam emphasizes the governance framework for architecture implementation, including compliance processes. It measures the understanding of TOGAF practitioners about governance principles, a key competency for the OGEA-101 exam.
Topic 9	• ADM Phase Requirements: This topic of the TOGAF Enterprise Architecture Part 1 exam focuses on the specific requirements for each ADM phase, including stakeholder identification and architecture scope definition. It measures the ability of aspiring TOGAF Practitioner to apply these requirements in real-world scenarios.

OGEA-101 Latest Exam Simulator | Exam OGEA-101 Quiz

It is important to cover TOGAF Enterprise Architecture Part 1 Exam (OGEA-101) exam topics and check if you need to practice them. If you are talking about the The Open Group OGEA-101 certification exam, you need to practice and overcome mistakes. If you do not practice for it, chances are that you might get confused while appearing for the OGEA-101 Exam. When you get the test study material, it comes with the The Open Group OGEA-101 practice exams (desktop & web-based) to solve.

The Open Group TOGAF Enterprise Architecture Part 1 Exam Sample Questions (Q76-Q81):

NEW QUESTION # 76
Complete the sentence. Risk management involves: risk classification, identification,

- A. measurement, response
- B. auditing, evaluation
- C. assessment, monitoring, mitigation and
- D. reporting, treatment

Answer: C

Explanation:
In TOGAF's treatment of risk within architecture governance and ADM Guidelines & Techniques, risk management is seen as a continuous process including several phases. First one classifies potential risk types.
Then one identifies specific risks. After identification comes assessment (evaluating likelihood and impact), monitoring (tracking over

time), mitigation (taking actions to reduce the risk), and related response or treatment options to decide what to do with residual risk. That sequence-classification, identification, assessment, monitoring, mitigation, and response-completes the risk management life cycle. It does not stop at evaluation or reporting; it includes active monitoring, control, and reaction to risks over time.

NEW QUESTION # 77

Complete the sentence. The "Statement" part of the recommended TOGAF template for Architecture Principles

- A. should be easy to remember
- B. should highlight the business benefits
- C. should clearly communicate the fundamental rule
- D. should highlight the requirements for carrying out the principle

Answer: C

Explanation:
In TOGAF, when defining an architecture principle, one part of the standard template is the "Statement." The purpose of the Statement is to convey clearly and unambiguously the principle itself - not its rationale, implications, or how to apply it. The Statement should be phrased such that stakeholders can read it and immediately understand the core rule or guiding intent. It is not intended to describe the implementation or benefits or constraints, nor to be a mnemonic. Thus the Statement must clearly communicate the fundamental rule. The rationale, implications, and further explanation belong in other parts of the principle documentation, not in the Statement. This division helps maintain clarity, separation of concerns, and consistency in how principles are documented and governed.

NEW QUESTION # 78

Exhibit
Consider the illustration showing an architecture development cycle Which description matches the phase of the ADM labeled as item 1?

- A. Provides architectural oversight for the implementation
- B. Establishes procedures for managing change to the new architecture
- C. Operates the process of managing architecture requirements
- D. Conducts implementation planning for the architecture defined in previous phases

Answer: C

Explanation:
* The illustration shows an architecture development cycle based on the TOGAF ADM (Architecture Development Method), which is a method for developing and managing an enterprise architecture1.
* The ADM consists of nine phases, each with a specific purpose and output. The phases are1:
* Preliminary Phase: To prepare and initiate the architecture development cycle, including defining the architecture framework, principles, and governance.
* Phase A: Architecture Vision: To define the scope, vision, and stakeholders of the architecture initiative, and to obtain approval to proceed.
* Phase B: Business Architecture: To describe the baseline and target business architecture, and to identify the gaps between them.
* Phase C: Information Systems Architectures: To describe the baseline and target data and application architectures, and to identify the gaps between them.
* Phase D: Technology Architecture: To describe the baseline and target technology architecture, and to identify the gaps between them.
* Phase E: Opportunities and Solutions: To identify and evaluate the opportunities and solutions for implementing the target architecture, and to define the work packages and transition architectures.
* Phase F: Migration Planning: To finalize the implementation and migration plan, and to ensure alignment with the enterprise portfolio and project management.
* Phase G: Implementation Governance: To provide architecture oversight and guidance for the implementation projects, and to manage any architecture change requests.
* Phase H: Architecture Change Management: To monitor the changes in the business and technology environment, and to assess the impact and performance of the architecture.
* In addition to these phases, there is a central process called Requirements Management, which is labeled as item 1 in the illustration. This process operates throughout the ADM cycle, and its purpose is to manage the architecture requirements throughout the architecture development, ensuring that they are aligned with the business requirements and the stakeholder concerns2.

* Therefore, the description that matches the phase of the ADM labeled as item 1 is C. Operates the process of managing architecture requirements.

NEW QUESTION # 79

What structural framework does the TOGAF Standard define to support the management, leverage, and storage of architectural work products?

- **A. The Architecture Repository**
- B. The Enterprise Architecture Capability Model
- C. The Architecture Capability
- D. The Architecture Landscape

Answer: A

Explanation:
* The Architecture Repository is the structural framework defined by TOGAF to store, manage, and leverage architecture artifacts, including reference models, standards, governance logs, and deliverables.
* The Architecture Capability refers to governance and processes.
* The Architecture Landscape shows Strategic, Segment, and Capability architectures, not storage.
* The Enterprise Architecture Capability Model is not a defined TOGAF concept.
Reference: TOGAF Standard, Version 9.2, Part V: Enterprise Continuum and Tools - Architecture Repository.

NEW QUESTION # 80

Which of the following best describes the need for the ADM process to be governed?

- A. To permit the architecture domains to be integrated
- **B. To verify that the method is being applied correctly**
- C. To enable a fast response to market changes
- D. To enable development of reference architectures

Answer: B

Explanation:
According to the TOGAF standard, the need for the ADM process to be governed is to ensure that the architecture development and implementation activities are conducted in a consistent, coherent, and compliant manner1. Governance provides the means to verify that the method is being applied correctly and effectively, and that the architecture deliverables and artifacts meet the quality and standards criteria1. Governance also enables the management of risks, issues, changes, and dependencies that may arise during the ADM process1.
Some of the benefits of governing the ADM process are2:
*Improved alignment of the architecture with the business strategy and objectives
*Enhanced stakeholder engagement and communication
*Increased reuse and integration of architecture assets and resources
*Reduced complexity and duplication of architecture efforts
*Increased agility and adaptability of the architecture to changing needs and requirements
*Improved compliance and auditability of the architecture outcomes and outputs

NEW QUESTION # 81

......

Since our company's establishment, we have devoted mass manpower, materials and financial resources into OGEA-101 exam materials and until now, we have a bold idea that we will definitely introduce our OGEA-101 study materials to the whole world and make all people that seek fortune and better opportunities have access to realize their life value. Our OGEA-101 Practice Questions, therefore, is bound to help you pass though the OGEA-101 exam and win a better future.
