

100% Pass 2026 Splunk High-quality SPLK-3002: Splunk IT Service Intelligence Certified Admin Test Cram Review

P.S. Free & New SPLK-3002 dumps are available on Google Drive shared by PracticeMaterial: https://drive.google.com/open?id=1vIv6YO3c9dIKaQOgePJfuGlf0_P-5Ooj

PracticeMaterial is within your reach to obtain the top-rated Splunk SPLK-3002 Exam Questions. And it guarantees that you will pass the SPLK-3002 certification exam on the maiden attempt. Several aspiring candidates have already heard about the prestigious Splunk IT Service Intelligence Certified Admin SPLK-3002 Certification. But the real problem they face is their inability to find trustworthy, updated, and relevant Splunk IT Service Intelligence Certified Admin SPLK-3002 exam practice tests that can assist them.

Splunk SPLK-3002 certification is highly valued by IT professionals and employers alike. It demonstrates that the certified individual has the skills and knowledge required to manage and administer Splunk ITSI solutions effectively. Splunk IT Service Intelligence Certified Admin certification also provides access to a global community of Splunk ITSI experts who can share knowledge, best practices, and solutions to common IT service management challenges. Overall, the SPLK-3002 certification is a valuable asset for IT professionals who want to advance their career in IT service management.

Splunk SPLK-3002: Splunk IT Service Intelligence Certified Admin exam is a certification exam that aims to test the skills and knowledge of IT professionals in using Splunk IT Service Intelligence (ITSI) to manage and monitor their IT services. SPLK-3002 Exam is designed to test the candidate's ability to configure and deploy ITSI, create service models, set up KPIs, and build dashboards to monitor the performance of IT services.

To prepare for the Splunk SPLK-3002 exam, candidates can enroll in various training courses offered by Splunk. These courses provide hands-on experience and practical knowledge of Splunk IT service intelligence concepts, tools, and applications. Moreover, Splunk provides online resources, such as study guides, practice exams, and community forums, to help candidates prepare for the exam.

Dumps SPLK-3002 Free Download, SPLK-3002 Valid Braindumps Sheet

The language of our SPLK-3002 qualification test guide is simple. The learners may come from many social positions and their abilities to master our SPLK-3002 test materials are varied. Based on this consideration we apply the most simple and easy-to-be-understood language to help the learners no matter he or she is the students or the in-service staff, the novice or the experienced employee which have worked for many years. SPLK-3002 Certification guide use the simple language to explain the answers and detailed knowledge points to help pass the SPLK-3002 exam.

Splunk IT Service Intelligence Certified Admin Sample Questions (Q62-Q67):

NEW QUESTION # 62

Which of the following items describe ITSI teams? (select all that apply)

- A. Services should be assigned to the 'global' team if all users need access to it.
- B. A new team admin role should be created for each team. The new role should inherit the 'itua_team_admin' role.
- C. Teams should have itoa admin roles added with read-only permissions for services and entities.
- D. By default, all services are owned by the built-in 'global' team and administered by the 'itua_admin' role.

Answer: A,B,D

Explanation:

In Splunk IT Service Intelligence (ITSI), teams are used to organize services, KPIs, and other objects within ITSI to facilitate access control and management:

B).Services should be assigned to the 'global' team if all users need access to it:The 'global' team in ITSI is a built-in concept that denotes universal accessibility. Assigning services to the 'global' team makes them accessible to all ITSI users, irrespective of their specific team memberships. This is useful for services that are relevant across the entire organization.

C).By default, all services are owned by the built-in 'global' team and administered by the 'itua_admin' role:This default setting ensures that upon creation, services are accessible to administrators and can be further re-assigned or refined for access by specific teams as needed.

D).A new team admin role should be created for each team. The new role should inherit the 'itua_team_admin' role:This best practice allows for granular access control and management within teams.

Each team can have its own administrators with the appropriate level of access and permissions tailored to the needs of that team, derived from the capabilities of the 'itua_team_admin' role.

The concept of adding 'itua admin roles' with read-only permissions contradicts the typical use case for administrative roles, which usually require more than read-only access to manage services and entities effectively.

NEW QUESTION # 63

Which of the following is a characteristic of notable event groups?

- A. All of the above.
- B. Notable event groups combine independent notable events.
- C. Notable event groups are created in the itsi_tracked_alerts index.
- D. Notable event groups allow users to adjust threshold settings.

Answer: B

Explanation:

In Splunk IT Service Intelligence (ITSI), notable event groups are used to logically group related notable events, which enhances the manageability and analysis of events:

A).Notable event groups combine independent notable events:This characteristic allows for the aggregation of related events into a single group, making it easier for users to manage and investigate related issues. By grouping events, users can focus on the broader context of an issue rather than getting lost in the details of individual events.

While notable event groups play a critical role in organizing and managing events in ITSI, they do not inherently allow users to adjust threshold settings, which is typically handled at the KPI or service level.

Additionally, while notable event groups are utilized within the ITSI framework, the statement that they are created in the 'itsi_tracked_alerts' index might not fully capture the complexity of how event groups are managed and stored within the ITSI architecture.

NEW QUESTION # 64

Which of the following accurately describes base searches used for KPIs in a service?

- A. All the KPIs in a service use the same base search.
- B. Base searches can be used for multiple services.
- C. A base search can only be used by its service and all dependent services.
- D. All the metrics in a base search are used by one service.

Answer: B

Explanation:

Explanation

KPI base searches let you share a search definition across multiple KPIs in IT Service Intelligence (ITSI).

Create base searches to consolidate multiple similar KPIs, reduce search load, and improve search performance.

NEW QUESTION # 65

Which of the following is an advantage of using adaptive time thresholds?

- A. Automatically adjust correlation search thresholds to adjust sensitivity over time.
- B. Automatically adjust KPI calculation to manage dynamic event data.
- C. Automatically update thresholds daily to manage dynamic changes to KPI values.
- D. Automatically adjust aggregation policy grouping to manage escalating severity.

Answer: C

Explanation:

Reference: <https://docs.splunk.com/Documentation/ITSI/4.10.2/SI/TimePolicies> Adaptive thresholds are thresholds calculated by machine learning algorithms that dynamically adapt and change based on the KPI's observed behavior. Adaptive thresholds are useful for monitoring KPIs that have unpredictable or seasonal patterns that are difficult to capture with static thresholds. For example, you might use adaptive thresholds for a KPI that measures web traffic volume, which can vary depending on factors such as holidays, promotions, events, and so on. The advantage of using adaptive thresholds is:

A). Automatically update thresholds daily to manage dynamic changes to KPI values. This is true because adaptive thresholds use historical data from a training window to generate threshold values for each time block in a threshold template. Each night at midnight, ITSI recalculates adaptive threshold values for a KPI by organizing the data from the training window into distinct buckets and then analyzing each bucket separately.

This way, the thresholds reflect the most recent changes in the KPI data and account for any anomalies or trends.

The other options are not advantages of using adaptive thresholds because:

B). Automatically adjust KPI calculation to manage dynamic event data. This is not true because adaptive thresholds do not affect the KPI calculation, which is based on the base search and the aggregation method.

Adaptive thresholds only affect the threshold values that are used to determine the KPI severity level.

C). Automatically adjust aggregation policy grouping to manage escalating severity. This is not true because adaptive thresholds do not affect the aggregation policy, which is a set of rules that determines how to group notable events into episodes. Adaptive thresholds only affect the threshold values that are used to generate notable events based on KPI severity level.

D). Automatically adjust correlation search thresholds to adjust sensitivity over time. This is not true because adaptive thresholds do not affect the correlation search, which is a search that looks for relationships between data points and generates notable events.

Adaptive thresholds only affect the threshold values that are used by KPIs, which can be used as inputs for correlation searches.

References: Create adaptive KPI thresholds in ITSI

NEW QUESTION # 66

Which anomaly detection algorithm is included within ITSI?

- A. Infantile regression
- B. Linear regression
- C. Entity cohesion
- D. Standard deviation

Answer: C

Explanation:

Among the anomaly detection algorithms included within Splunk IT Service Intelligence (ITSI), "Entity Cohesion" is a notable option. The Entity Cohesion algorithm is designed to detect anomalies by comparing the behavior of one entity against the collective behavior of a group of similar entities. This approach is particularly useful in scenarios where entities are expected to exhibit similar patterns of behavior under normal conditions. Anomalies are identified when an entity's metrics deviate significantly from the group norm, suggesting a potential issue with that specific entity. This method leverages the concept of cohesion among similar entities to enhance the accuracy and relevance of anomaly detection within ITSI environments.

NEW QUESTION # 67

.....

Preparing for the Splunk IT Service Intelligence Certified Admin (SPLK-3002) certification test can be a difficult task for candidates. They often face several challenges during their preparation for the Splunk IT Service Intelligence Certified Admin (SPLK-3002) exam, including fear, lack of updated SPLK-3002 Exam Dumps, and time constraints. Fortunately, there is a solution to these challenges. PracticeMaterial is a reliable website that provides genuine and updated SPLK-3002 Practice Test.
