Successful completion of CRT-450 exam leads to the Salesforce Certified Platform Developer I certification, which is widely recognized in the industry and can help you stand out in the job market.

## Salesforce Certified Platform Developer I Sample Questions (Q44-Q49):

### NEW QUESTION # 44

A developer created a new after insert trigger on the Lead object that creates Task records for each Lead.

After deploying to production, an existing outside integration that inserts Lead records in batches to Salesforce is occasionally reporting total batch failures being caused by the Task insert statement. This causes the integration process in the outside system to stop, requiring a manual restart.

Which change should the developer make to allow the integration to continue when some records in a batch cause failures due to the Task insert statement, so that manual restarts are not needed?

- **A. Use a try-catch block after the insert statement.**
- B. Deactivate the trigger before the integration runs.
- C. Remove the Apex class from the integration user's profile.
- D. Use the Database method with allow one set to false.

**Answer: A**

Explanation:

A try-catch block allows the batch to continue processing even if some records cause errors. Errors can be logged for review, ensuring the integration process does not stop entirely.

Reference:Error Handling in Apex

Incorrect Options:

A:Database.insertwithallowPartialwould be required for partial processing but is not mentioned.

B:Deactivating the trigger disrupts other processes.

C:Removing Apex classes is unrelated.

#### NEW QUESTION # 45

Given the following Anonymous block:

What should a developer consider for an environment that has over 10,000 Case records?

- A. The transaction will succeed and changes will be committed.
- B. The try-catch block will handle any DML exceptions thrown.
- **C. The transaction will fail due to exceeding the governor limit.**
- D. The try-catch block will handle exceptions thrown by governor limits.

**Answer: C**

#### NEW QUESTION # 46

Which three resources in an Aura component can contain JavaScript functions?

Choose 3 answers

- A. Design
- **B. Helper**
- **C. Renderer**
- **D. Controller**
- E. Style

**Answer: B,C,D**

#### NEW QUESTION # 47

Which two scenarios require an Apex method to be called imperatively from a Lightning web component?

Choose 2 answer

- **A. Calling a method that is not annotated with cacheable=true**
- **B. Calling a method that is external to the main controller for the Lightning web component**
- C. Calling a method that makes a web service callout
- D. Calling a method with the click of a button

**Answer: A,B**
