Valid Cisco 100-160 Exam Answers | Exam 100-160 Bootcamp

The Cisco 100-160 certification exam syllabus is changing with the passage of time. As a 100-160 exam candidate you have to be aware of these Cisco 100-160 exam changes. To give you complete knowledge about the Cisco 100-160 Exam Topics, the ITExamSimulator has hired a team of experts that consistently work on these changes and add these changes in Cisco 100-160 exam practice test questions.

Cisco 100-160 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Basic Network Security Concepts: This section of the exam measures the skills of a Network Defender and focuses on understanding network-level protections, including firewalls, VPNs, and intrusion detection prevention systems, providing insight into how threats are mitigated within network environments.
Topic 2	<ul style="list-style-type: none">Vulnerability Assessment and Risk Management: This section of the exam measures the skills of a Risk Management Analyst and entails identifying and assessing vulnerabilities, understanding risk priorities, and applying mitigation strategies that help manage threats proactively within an organization's systems
Topic 3	<ul style="list-style-type: none">Essential Security Principles: This section of the exam measures the skills of a Cybersecurity Technician and covers foundational cybersecurity concepts such as the CIA triad (confidentiality, integrity, availability), along with basic threat types and vulnerabilities, laying the conceptual groundwork for understanding how to protect information systems.
Topic 4	<ul style="list-style-type: none">Endpoint Security Concepts: This section of the exam measures the skills of an Endpoint Security Specialist and includes securing individual devices, understanding protections such as antivirus, patching, and access control at the endpoint level, essential for maintaining device integrity.

Topic 5

- **Incident Handling:** This section of the exam measures the skills of an Incident Responder and centers on recognizing security incidents, responding appropriately, and containing threats—forming the essential foundation of incident response procedures.

Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q227-Q232):

NEW QUESTION # 227

Which of the following is true about security policies and procedures?

- **A. They should be regularly reviewed and updated to reflect changing threats and technologies**
- B. They should be documented once and never changed.
- C. They should only be accessible to the IT department.
- D. They should be kept confidential and not shared with employees.

Answer: A

Explanation:

Option 1: Correct: Security policies and procedures should be regularly reviewed and updated to ensure they align with changing threats and technologies. This helps to maintain the effectiveness of the policies and processes.

Option 2: Incorrect: Security policies and procedures should be accessible to relevant employees and stakeholders, not restricted only to the IT department. It is important for everyone to understand and adhere to the policies and procedures.

Option 3: Incorrect: Security policies and procedures should be regularly updated as needed, not documented once and never changed. The changing threat landscape and evolving technologies necessitate the periodic review and update of security policies and procedures.

Option 4: Incorrect: Security policies and procedures should be communicated and shared with employees to ensure everyone understands and follows them. Keeping them confidential and not sharing them would hinder their effectiveness.

NEW QUESTION # 228

Which type of encryption protects data while it is being transmitted over a network?

- A. Asymmetric encryption
- **B. Transport Layer Security (TLS)**
- C. Hash encryption
- D. Symmetric encryption

Answer: B

Explanation:

Transport Layer Security (TLS) is a cryptographic protocol that provides secure communication over a network. It ensures the confidentiality and integrity of data while in transit by encrypting it. TLS is commonly used to protect sensitive information during online transactions, such as credit card numbers or login credentials.

NEW QUESTION # 229

Which of the following is a benefit of implementing a comprehensive vulnerability management program?

- **A. It helps prevent the loss or compromise of sensitive data.**
- B. It eliminates the need for system administrators to manage security updates.
- C. It reduces the need for security testing and audits.
- D. It guarantees protection against all types of cyber threats.

Answer: A

Explanation:

Implementing a comprehensive vulnerability management program helps prevent the loss or compromise of sensitive data. By identifying and patching vulnerabilities, organizations can minimize the risk of data breaches or unauthorized access. A proactive vulnerability management approach allows organizations to stay ahead of potential threats and protect sensitive information from

falling into the wrong hands.

NEW QUESTION # 230

What is the purpose of conducting a hardware inventory assessment on an endpoint system?

- A. To identify potential gaps in security policies
- **B. To ensure compliance with hardware standards**
- C. To track changes made to hardware configurations
- D. To determine software compatibility requirements

Answer: B

Explanation:

Conducting a hardware inventory assessment helps organizations ensure compliance with their hardware standards. By maintaining an up-to-date inventory of hardware components, organizations can identify any deviations from their standard configurations and take necessary actions to address them.

NEW QUESTION # 231

What is a denial of service (DoS) attack?

- A. A technique used by attackers to obtain sensitive information through deception.
- **B. An attack that overwhelms a target system with a flood of traffic or requests, rendering it inaccessible to legitimate users.**
- C. A form of cyber attack that attempts to gain unauthorized access to a network.
- D. A software program that is designed to damage, disrupt, or gain unauthorized access to a computer system.

Answer: B

Explanation:

A denial of service (DoS) attack is a type of cyber attack that aims to make a target system or network unavailable to its intended users by overwhelming it with a flood of traffic or requests. This effectively denies legitimate users access to the system.

NEW QUESTION # 232

.....

There is no denying that no exam is easy because it means a lot of consumption of time and effort. Especially for the upcoming 100-160 exam, although a large number of people to take the exam every year, only a part of them can pass. If you are also worried about the exam at this moment, please take a look at our 100-160 Study Materials, whose content is carefully designed for the 100-160 exam, rich question bank and answer to enable you to master all the test knowledge in a short period of time.
