Unparalleled Microsoft MB-820 Certification Exam | Try Free Demo before Purchase

Our company is a professional certificate exam materials provider, and we have occupied in this field for years. Our company is in the leading position in exam materials providing. MB-820 exam materials of us have high pass rate, and you can pass it by using them, and money back guarantee for your failure. MB-820 Exam Materials have the questions and answers and therefore you can practice the question and check the answers in a quite convenient way. We also offer you free update for one year, and you can get the latest version timely if you buy the MB-820 exam dumps from us.

Microsoft Dynamics 365 Business Central Developer Sample Questions (Q70-Q75):

NEW QUESTION # 70
You create a Business Central report.
You need to insert values on the Request page to be saved for the next time the report is run.
What should you do?

- A. Set the UseRequestPage property to true.
- B. Set the TransactionType property to Update.
- C. Set the SaveValues property to true.
- D. Declare a 'SaveValues' variable and assign it to true on the OnOpenPage() trigger.

Answer: D

Explanation:

To ensure that the values inserted on the Request page of a Business Central report are saved for the next time the report is run, the SaveValues property (D) should be set to true. This property is available on the Request page of the report and, when set to true, allows the system to remember the values entered by the user, so they do not have to re-enter them each time they run the report. This feature enhances user experience by reducing repetitive data entry and ensuring consistency in report parameters across multiple executions. The other options mentioned, such as setting the Transaction Type property to Update (A) or declaring a Savevalues variable in the OnOpenPage trigger (B), are not directly related to saving user input on a report's Request page.

NEW QUESTION # 71

You need to create the Install codeunit that is requited in the extension used for installing or updating the Housekeeping app.
Which data type or declaration should you use? To answer, select the appropriate options in the answer area.
NOTE; Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 72

You need to access the RoomsAPI API from the canvas app.
What should you do?

- A. Open the Web Services page and publish the RoomsAPI page as a web service.
- B. Enable the APIs for the Business Central online environment.
- C. Include in the extension a codeunit of type Install that publishes RoomsAPI.
- D. Use the default API configuration in Business Central

Answer: C

Explanation:
API Publishing for Extensions:
In Business Central, when creating custom APIs like RoomsAPI, it is important to ensure that they are automatically published during the installation or upgrade of the extension.
To achieve this, you can include a codeunit of type Install in the extension that explicitly publishes the custom API (RoomsAPI) as a web service. This ensures that it is available for use immediately after the extension is deployed without requiring manual intervention.
Codeunit Type:
A codeunit of type Install runs when the extension is installed or upgraded. This type of codeunit can be used to perform setup tasks

such as publishing web services or APIs like RoomsAPI.
Why Not Other Options?
Option A (default API configuration): This would not automatically publish the RoomsAPI. Default APIs do not cover custom APIs.
Option B (enable APIs for the environment): Enabling APIs in Business Central allows the standard APIs to be used, but custom APIs still need to be manually published.
Option C (publish via Web Services page): This would work but requires manual intervention to publish RoomsAPI, which does not fulfill the requirement of automatic publishing during installation.
Reference Documentation:
Publishing APIs in Extensions
Codeunit Types in Business Central

NEW QUESTION # 73
A company plans to deploy Business Central.
The company has the following deployment requirements:
* Use the company hardware architecture to run the deployment.
* Use sandbox environments to develop extensions.
* Allow tenants to connect to Shopify with the standard connector.
* Use Microsoft Power Automate to create a workflow that calls a business event.
You need to identify the deployment type for each requirement.
Which deployment types should you use? To answer, move the appropriate deployment types to the correct requirements. You may use each deployment type once, more than once, or not at all.

Answer:

Explanation:

NEW QUESTION # 74
You need to create the code related to the Subcontract Documents table to meet the requirement for the quality department.
How should you complete the code segment? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Standard triggers in code

```
codeunit 50100 Vendor                                              ▼
codeunit 50100 Vendor
table 50100 "Vendor Control"
tableextension 50100 "Vendor Control" extends Vendor
tableextension 50100 "Vendor Control" extends "Subcontract Documents"

{
    trigger OnDelete()                              ▼
    trigger OnDelete()
    trigger OnModify()
    procedure OnDeleteSubcontractDocument()

var
    SubcontractDocument: Record "Subcontract Documents";
    errLbl: Label 'You cannot remove a vendor that has subcontract documents.';
begin
    SubcontractDocument.SetRange("Subcontract No.", rec."No.");
    SubcontractDocument.SetRange("Posted", false);
    if not SubcontractDocument.IsEmpty then
        error(errLbl)                          ▼
        confirm(errLbl)
        error(errLbl)
        message(errLbl)

    else begin
        SubcontractDocument.SetRange(Posted);
        if SubcontractDocument.FindSet() then
            SubcontractDocument.DeleteAll();
    end;
end;
```

Answer:
