

Quiz 2026 SolarWinds Pass-Sure SCP-NPM: Upgrade SolarWinds Network Performance Monitor (NPM) Exam Dumps

Unlock Your Potential with SolarWinds SCP-NPM Exam Dumps

Are you preparing for the SolarWinds Network Performance Monitor (NPM) Exam and looking for reliable resources? The SCP-NPM exam, also known as the SolarWinds Network Performance Monitor (NPM) Exam, is crucial for achieving the SolarWinds Certified Professional certification. This certification validates your expertise in using SolarWinds tools to manage and monitor network performance.

Exam Preparation with SCP-NPM Dumps

Preparing for the SCP-NPM exam can be challenging, but with the right resources, you can ace it. SCP-NPM Dumps, especially those offered by DumpsGroup, are invaluable. They provide real exam questions and answers, ensuring you are well-prepared. These SCP-NPM Dumps PDF include comprehensive questions and answers, mimicking the actual exam format, making your preparation more effective. By using

SCP-NPM Answer Question sets, you can familiarize yourself with the types of questions you will encounter.

DumpsGroup is a trusted source for SCP-NPM Practice Test materials. They are currently offering a **20% discount** on their dumps. Use the coupon code **"SAVE20"** to get this discount and start your journey towards becoming a SolarWinds Certified Professional.

Benefits of Passing the SCP-NPM Exam

Passing the SCP-NPM exam not only enhances your knowledge but also significantly boosts your career prospects. With the SolarWinds Certified Professional certification, you stand out in the job market. It opens up opportunities in network administration, network engineering, and IT support roles. Companies highly value professionals who can effectively monitor and troubleshoot network performance using SolarWinds tools.

As professional model company in this line, success of the SCP-NPM training materials will be a foreseeable outcome. Even some nit-picking customers cannot stop practicing their high quality and accuracy. We are intransigent to the quality of the SCP-NPM exam questions and you can totally be confident about their proficiency sternly. Undergoing years of corrections and amendments, our SCP-NPM Exam Questions have already become perfect. The pass rate of our SCP-NPM training guide is as high as 99% to 100%.

SolarWinds SCP-NPM certification exam is designed to validate the skills and knowledge required to manage and monitor network performance using SolarWinds Network Performance Monitor software. It is a globally recognized certification that is valuable for network and IT professionals looking to advance their careers. With the right preparation and study resources, candidates can successfully pass the exam and earn their SCP-NPM Certification.

SCP-NPM New Guide Files & SCP-NPM Valid Test Objectives

Are you still worried about not passing the SCP-NPM exam? Do you want to give up because of difficulties and pressure when reviewing? You may have experienced a lot of difficulties in preparing for the exam, but fortunately, you saw this message today because our well-developed SCP-NPM Study Materials will help you tide over all the difficulties. As a multinational company, our SCP-NPM study materials serve candidates from all over the world. No matter which country you are currently in, you can be helped by our SCP-NPM study materials.

The SCP-NPM Certification Exam is a vendor-neutral certification, which means that it is not tied to any specific hardware or software vendor. It is an independent certification that demonstrates your proficiency in network performance monitoring and management using the SolarWinds platform. SolarWinds Network Performance Monitor (NPM) Exam certification is recognized globally, and it is an excellent way to validate your skills and knowledge to potential employers, clients, and peers.

SolarWinds Network Performance Monitor (NPM) Exam Sample Questions (Q40-Q45):

NEW QUESTION # 40

Network performance over an inter-campus Ethernet link is slow. One side of the connection is experiencing a high number of packet drops. What information in NPM can you review to help discover the cause of the issue?

- A. Possible Duplex Mismatches
- B. MTU of each side of the link
- C. Packet loss on the nodes on either side of the connection
- D. Routing tables on each side of the link

Answer: C

Explanation:

Packet loss is a measure of how many packets are lost or discarded during transmission over a network.

Packet loss can cause network performance issues such as slow response time, jitter, and degraded voice quality. NPM can monitor packet loss on nodes and interfaces using ICMP ping or SNMP statistics. You can review the packet loss metrics on the Node Details or Interface Details views, or create a custom chart or report to compare packet loss across multiple nodes or interfaces. By reviewing the packet loss on the nodes on either side of the connection, you can identify which node or interface is experiencing the problem and troubleshoot the root cause. You can also use the Performance Analysis dashboard (PerfStack) to correlate packet loss with other metrics such as response time, CPU load, memory usage, buffer misses, and interface errors¹²³. NEW QUESTION # 41

How can you ensure the trigger actions you set on an alert will work?

- A. Simulate a performance interruption on a network device to test the alert trigger
- B. Test the alert from within Alert View of the Web Console
- C. Click Simulate on the assigned trigger action
- D. Use the Database Manager to trigger and test the alert

Answer: C

Explanation:

When you create or edit an alert, you can test the trigger and reset actions by clicking Simulate next to the action you want to test. This will execute the action regardless of the trigger condition. You can also select an object to resolve any variables you have used in your action. For example, if your action is to send an email with the node name and status, you can select a node to see how the email will look like. This way, you can ensure the trigger actions you set on an alert will work as expected. Reference: Test alert triggers and actions in the SolarWinds Platform, How to Create Intelligent Alerts with NPM, How alerts work.

NEW QUESTION # 42

You need to add a new subnet of 500 devices for monitoring. What is the first step to incorporate these devices into NPM?

- A. Measure network-wide bandwidth consumption
- B. Collect NetFlow from a core router

- C. Add the nodes using the Add Node feature in Manage Nodes
- **D. Perform a Network Discovery**

Answer: D

Explanation:

To add a new subnet of 500 devices for monitoring, the first step is to perform a network discovery using the Network Sonar Wizard in NPM. This wizard allows you to scan your network by IP address range, subnet, or seed device and automatically discover and add nodes and interfaces to NPM for monitoring. You can also specify credentials, polling settings, and custom properties for the discovered devices. Performing a network discovery can help you quickly and efficiently incorporate new devices into NPM without manually adding them one by one. Reference: Discover your network devices, Specify subnets, Discover devices by subnets

NEW QUESTION # 43

What is the most time-efficient way to create a report in NPM that shows the top 50 interfaces by percent utilization?

- A. Create a new advanced SQL query report
- B. Create an interface report and use a filter to restrict to the top 50
- **C. Edit the default top 25 interfaces by percent utilization report and update to the top 50**
- D. Run the default top 25 interfaces by percent utilization report for different timeframes

Answer: C

Explanation:

NPM provides a default report called Top 25 Interfaces by Percent Utilization that shows the interfaces with the highest average utilization over the selected time period¹. This report can be easily edited to change the number of interfaces displayed, the time period, the sorting order, the layout, and the filters². To create a report that shows the top 50 interfaces by percent utilization, you can simply edit this report and change the Limit option from 25 to 503. This is the most time-efficient way to create the report, as it does not require creating a new report from scratch, writing a SQL query, or running the report multiple times for different timeframes. Reference: 1: Network Performance Monitor Administrator Guide - Top 25 Interfaces by Percent Utilization 2: Network Performance Monitor Administrator Guide - Edit a report 3: Network Performance Monitor Getting Started Guide - Customize a report

NEW QUESTION # 44

You deploy a new router on your network. What should you do to ensure NPM correctly interprets SNMP traps from the device?

- A. Update the MIB database
- **B. Verify that NPM is using the correct SNMP community strings**
- C. Contact the router vendor for a firmware update
- D. Review your firewall rules to ensure the traps are not blocked

Answer: B
