Success in the Cisco 300-610 exam paves the way toward high-paying jobs, promotions, and skills verification. Hundreds of Cisco 300-610 test takers do not get success because of using Cisco 300-610 outdated dumps. Due to failure, they lose money, time, and confidence. All these losses can be prevented by using updated and real 300-610 exam.

Cisco 300-610 Certification Exam is a challenging exam that requires a deep understanding of data center infrastructure design. Candidates who pass the exam demonstrate their ability to design complex data center infrastructures that meet the needs of their organization. Designing Cisco Data Center Infrastructure certification exam is ideal for network architects, systems engineers, and IT professionals who are responsible for designing, implementing, and managing data center infrastructures.

Earn the Credential of Cisco 300-610 Exam

Through years of marketing, our 300-610 latest certification guide has won the support of many customers. The most obvious data is that our products are gradually increasing each year, and it is a great effort to achieve such a huge success thanks to our product development. First of all, we have done a very good job in studying the updating of materials. In addition, the quality of our 300-610 real study braindumps is strictly controlled by teachers. So, believe that we are the right choice, if you have any questions about our study materials, you can consult us.

Cisco Designing Cisco Data Center Infrastructure Sample Questions (Q39-Q44):

NEW QUESTION # 39

Drag and drop the components from the left onto the descriptions on the right that indicate what occurs to Fibre Channel fabric when that component fails.

fabric interconnect	The Fibre Channel fabric fails for all of the connected Cisco UCS chassis.
FEX	The Fibre Channel fabric fails for one Cisco UCS chassis.
FEX link of the fabric interconnect	The Fibre Channel fabric fails for some of the servers within a Cisco UCS chassis.
converged network adapter	The Fibre Channel fabric fails for one server.

Answer:

Explanation:

fabric interconnect	converged network adapter
FEX	FEX link of the fabric interconnect
FEX link of the fabric interconnect	fabric interconnect
converged network adapter	FEX
fabric interconnect	converged network adapter
FEX	FEX link of the fabric interconnect
FEX link of the fabric interconnect	fabric interconnect
converged network adapter	FEX

NEW QUESTION # 40

Drag and drop the configurations from the left onto the correct policies on the right.

Set the number of queues.	vNIC/vHBA Placement Policy
Set the RSS hash value.	
Assign each vCon to a physical adapter.	Ethernet Adapter Policy
Assign adapter order.	

Answer:

Explanation:

Set the number of queues.	vNIC/vHBA Placement Policy
Set the RSS hash value.	
Assign each vCon to a physical adapter.	Ethernet Adapter Policy
Assign adapter order.	

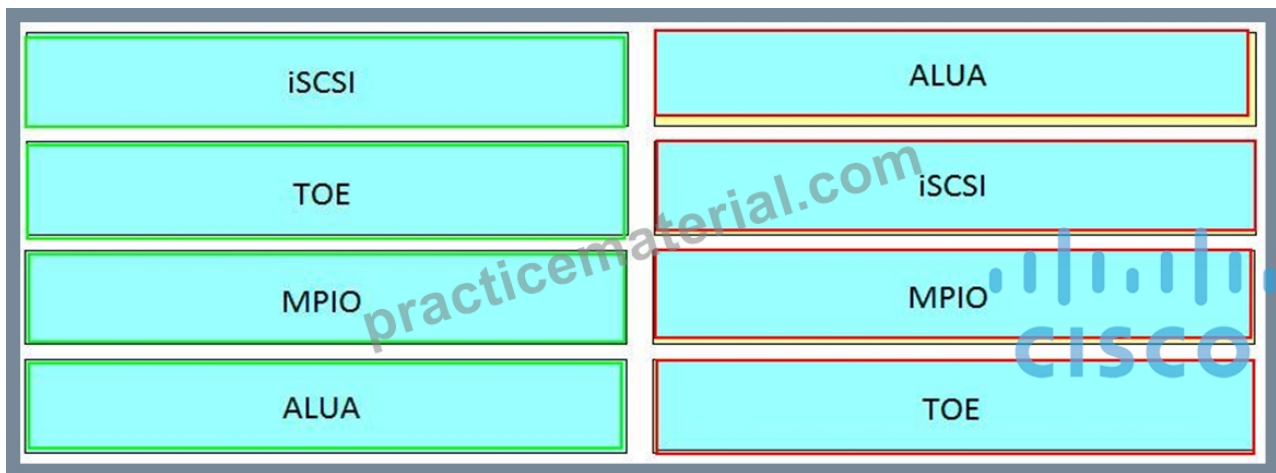

NEW QUESTION # 41

Drag and drop the technologies from the left onto the correct descriptions on the right.

iSCSI	allows the storage system to tell the client which paths are optimized
TOE	provides block-level access to the storage
MPIO	host software has visibility into different iSCSI ports
ALUA	offloads device CPU from encapsulation / decapsulation

Answer:

Explanation:

NEW QUESTION # 42

Refer to the exhibit. A Cisco engineer is configuring a data center design scenario with Cisco MDS 90Q0 Series Switches. The cut-through routing mode is chosen for improved read operation performance. Each SCSI host requires access to storage through the IPS module. First, the engineer configures the TCP tuning parameters as enabled SACK, the maximum bandwidth of 1 Gbps, buffer size of 4096, keepalive timeout at 1s, and enables Path MTU. Then, the engineer must set the OoS of the iSCSI link. What is the maximum QoS value that must be set for the iSCSI session?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

NEW QUESTION # 43

An engineer is deploying a Fabric Interconnect within a data center SAN over a Fiber Channel link in end-host mode. The hosts are connected through multiple vHBAs, each of which has been hard-pinned to a specific Fibre Channel uplink. What happens to the vHBAs if the Fibre Channel uplink port fails?

- A. The vHBAs go down and remain down until the uplink is restored because the system cannot perform repinning.
- B. The vHBAs go down and remain down until the fabric interconnect mode is changed to switch mode.
- C. The vHBAs remain operational because SAN pin groups are ignored in end host mode.
- D. The system performs repinning to an active uplink, and the vHBAs remain operational.

Answer: A

Explanation:

In Fibre Channel End-Host Mode with static pinning, each vHBA is locked ("hard-pinned") to its assigned uplink port. If that physical uplink fails, there's no automatic repinning to another uplink-so the vHBA stays down until its original path comes back up.

NEW QUESTION # 44

.....

Our Designing Cisco Data Center Infrastructure test torrent boost 99% passing rate and high hit rate so you can have a high probability to pass the exam. Our 300-610 study torrent is compiled by experts and approved by the experienced professionals and the questions and answers are chosen elaborately according to the syllabus and the latest development conditions in the theory and the practice and based on the real exam. If you buy our Designing Cisco Data Center Infrastructure test torrent you only need 1-2 hours to learn and prepare the exam and focus your main attention on your most important thing.
