- A. Lookup (Order Delivery Method)
- B. One-to-One Lookup (Location) FulfillmentFrom LocationId
- C. Junction (Many to Many)
- D. Master-Detail (Order Delivery Method)

Answer: A

Explanation:
The type of relationship that exists between FulfillmentOrder and Order Delivery Method is Lookup (OrderDelivery Method). A

In this case, a FulfillmentOrder has a Lookup field named Order Delivery Method that references an Order Delivery Method record. NEW QUESTION # 70
What ate two reasons an admin should choose an Eventover a Trigger when it comes to building out a solution?

- A. Events are asynchronous
- B. Events do not participate in a transaction scope
- C. Events cannot be subscribed lo in a batch for bulk operations
- D. Event order is not guaranteed within a topic

Answer: A,B

Explanation:
Two reasons an admin should choose an Event over a Trigger when it comes to building out a solution are:
Events are asynchronous. This means that events are processed in the background, without blocking the main execution thread. This can improve the performance and user experience of the solution, as well as avoid governor limits and timeouts.
Events do not participate in a transaction scope. This means that events are independent of the transaction that publishes them, and they do not affect the rollback or commit behavior of the transaction. This can avoid unwanted side effects and errors in the solution, as well as decouple the logic from the data.

NEW QUESTION # 71
A user is encountering an error when attempting to save an Account record. What can an administrator use to research the issue?

- A. The Chrome Dev Tools Console
- B. The Problems tab within the developer console
- C. A user trace flag and debug log onthe affected user
- D. Lightning Logs within Setup

Answer: C

Explanation:
The best way for an administrator to research the issue when a user is encountering an error when attempting to save an Account record is to use a user trace flag and debug log on the affected user. A user trace flag enables debug logging for a specific user, and a debug log captures database operations, system processes, and errors that occur when executing a transaction or running unit tests.
