To Become Salesforce Certified, Rely on Updated Arch-303 Dumps

All contents of Arch-303 training guide are being explicit to make you have explicit understanding of this exam. Their contribution is praised for their purview is unlimited. None cryptic contents in Arch-303 learning materials you may encounter. And our Arch-303 Exam Questions are easy to understand and they are popular to be sold to all over the world. Just look at the comments on the website, then you will know that we have a lot of loyal customers.

Salesforce Certified B2C Commerce Architect Sample Questions (Q63-Q68):

NEW QUESTION # 63

A client has just pushed a new site live to Production. However during smoketesting. It's found that some customers are not seeing the correct pricing on the Product Detail Page.

What three places would the Architect begin to look for the cause of this Issue?

Choose 3 answers

- ☒ A. Check that there was not an error during replication.
- ☐ B. Check Log Center
- ☒ C. Check that the cache is set correctly
- ☒ D. Check the Global Preferences to be sure the settings are correct.
- ☐ E. Check the Quota Status page.

Answer: A,C,D

Explanation:

To resolve issues where some customers are not seeing the correct pricing on the Product Detail Page, the following places should be examined:

* Global Preferences (C): It's critical to check the global preferences settings to ensure they align with the intended pricing strategy and configurations. This includes checking currency settings, pricing rules, and tax configurations, which can all influence the pricing displayed to customers.

* Error during replication (D): If there were errors during data replication, this could lead to inconsistencies such as incorrect pricing being shown. Ensuring that data has been replicated correctly and without errors is essential, particularly when moving from staging to production environments.

* Cache settings (E): Incorrect cache settings or outdated cached data can cause old or incorrect pricing to be displayed. Clearing the cache or verifying that cache invalidation rules are correctly set can resolve such issues.

These steps are critical for ensuring that the displayed pricing is accurate and consistent, providing a seamless user experience.

NEW QUESTION # 64

The Client is creating a new Storefront and their requirements include:

- * ApplePay support
- * Log in through a standard OAuth2 social media account
- * One Click checkout process
- * A/B testing for promotions

Which two items require technical documentation for customizing the Storefront Reference Architecture?

Choose 2 answers

- A. A/B testing for promotions
- B. log in through a standard OAuth2 social media account
- C. ApplePay support
- D. One Click checkout process

Answer: B,D

Explanation:

For customizing the Storefront Reference Architecture to meet specific requirements, the following items would require detailed technical documentation:

* Option A (One Click checkout process): Implementing a one-click checkout process involves significant customization to streamline the checkout flow, potentially requiring integration with payment providers and modifications to the user session management.

* Option C (Log in through a standard OAuth2 social media account): Integrating OAuth2 for social media logins involves handling authentication tokens, user sessions, and potentially syncing user data with the B2C Commerce profiles, all of which require detailed security and integration documentation.

These customizations require careful planning and implementation to ensure they work seamlessly with existing Storefront Reference Architecture components and meet security standards.

NEW QUESTION # 65

There is an issue with the site when the domain is opened from Google search results. After researching the problem, it turns out that the site returns a 404 page error when accessed with a parameter in the URL.

What should the Architect recommend to fix that issue?

- A. Add this snippet to the aliases configuration for the domain:
- B. Add dynamic redirect if the URL contains parameter to Home Show. Add this snippet to the aliases configuration for the domain
- C. Add this snippet to the aliases configuration for the domain
- D. Add dynamic catch-all rule to redirect to home page.

Answer: D

Explanation:

To address the issue of the site returning a 404 error when accessed with a parameter from Google search results, a dynamic catch-all rule to redirect such requests to the homepage is an effective solution (Answer A).

This approach ensures that users landing from external links with appended parameters, which might not match any configured route or alias, are redirected to a valid page instead of seeing an error page. This improves the user experience and minimizes potential bounce rates caused by broken links or outdated URLs.

NEW QUESTION # 66

During code review, the Architect found that there is a service call on every visit of the product detail page (PDP).

What best practices should the Architect ensure are followed for the service configuration?

Choose 2 answers

- A. Service mock up call is configured.
- B. Circuit breaker is enabled.
- C. Service timeout is set.
- D. Service logging is disabled.

Answer: A

Explanation:

For logging practices in a complex LINK cartridge integration, the recommendation is:

* Get logger for cartridge-specific category (C): This practice allows for more precise and relevant logging by focusing on the specific cartridge, making troubleshooting more efficient.

* Report debug level message for the back-end asynchronous communication: This ensures that all detailed interactions are logged, providing valuable data for diagnosing issues.

* Report all errors at error level message: This categorizes all critical issues under error logs, which is essential for quick identification and resolution of problems affecting the system's operations.

This structured logging strategy enhances the ability to monitor and troubleshoot the system effectively, especially in complex integrations where multiple components interact asynchronously.

NEW QUESTION # 67

Given a website launched to production, the Architect can rely on several SFCC Business Manager tools that provide an automatic notification feature.

Which three tools have such a feature and do not require to be monitored manually?

Choose 3 answers

- A. Pipeline Profiler
- B. Analytics Conversion Reports
- C. Job Schedules
- D. Quota Status
- E. Custom Log Settings

Answer: A,C,D

Explanation:

The Salesforce B2C Commerce Business Manager tools that feature automatic notifications are:

* Option A (Job Schedules): Business Manager can send notifications based on job schedules, alerting users when a scheduled job has completed, failed, or met specific conditions. This feature helps in monitoring automated processes without manual oversight.

* Option D (Pipeline Profiler): This tool provides automatic notifications regarding the performance of different pipelines, allowing architects and developers to monitor site performance and troubleshoot issues proactively.

* Option E (Quota Status): Automatically notifies administrators when certain quotas are reached or exceeded, such as API call limits or data storage limits, which is crucial for maintaining site stability and performance.

These tools are essential for proactive site management, ensuring that administrators can address potential issues before they affect the site's operation.

NEW QUESTION # 68

.....

They work together and put all their expertise, knowledge, and experience and make sure the top standard of ExamsReviews Arch-303 exam questions all the time. So we can say that the ExamsReviews Arch-303 exam practice test questions are the ideal study
