

Utilizing Trustworthy JN0-253 Dumps - No Worry About Mist AI, Associate (JNCIA-MistAI)

P.S. Free 2026 Juniper JN0-253 dumps are available on Google Drive shared by Easy4Engine: <https://drive.google.com/open?id=1j8JdDYFOBWH78NcI0GG3UJn7iIyKiOSi>

After your payment is successful, you will receive an e-mail from our system within 5-10 minutes, and then, you can use high-quality JN0-253 exam guide to learn immediately. Everyone knows that time is very important and hopes to learn efficiently, especially for those who have taken a lot of detours and wasted a lot of time. The sooner you download and use JN0-253 Training Materials the sooner you get the JN0-253 certificate.

Juniper JN0-253 Exam Syllabus Topics:

Topic	Details
Topic 1	Location-based Services: This domain presents virtual Bluetooth Low Energy capabilities for asset tracking, visibility, and location-aware experiences that extend networking into physical space management.
Topic 2	Juniper Mist Network Operations and Management: This domain examines operational features across Wi-Fi, Wired, WAN, Routing, and Access Assurance, delivering specialized management capabilities for different network infrastructure layers.
Topic 3	Juniper Mist Cloud Operations: This domain covers three API types (RESTful, WebSocket, Webhook) for programmatic integration, plus support resources including ticketing systems and documentation.
Topic 4	Juniper Mist Configuration Basics: This domain addresses initial setup including user accounts, device onboarding, organizational structures, subscription licensing, certificate management, and automated provisioning with labels and policies.

JN0-253 Real Torrent & Valid JN0-253 Dumps

Practicing the JN0-253 exam questions, you actually learn to answer the real JN0-253 exam questions. Additionally, you also study time management to solve paper in the given time. Above all, you overcome the fear of the real exam and doing JN0-253 Exam Dumps, you gain enough confidence and examination ability that is necessary to pass the tough JN0-253 certifications.

Juniper Mist AI, Associate (JNCIA-MistAI) Sample Questions (Q42-Q47):

NEW QUESTION # 42

What should be specified in the session policy settings?

- A. The minimum number of characters required for the password.

- B. The types of special characters allowed in the password.
- C. The implementation of two-factor authentication (2FA).
- D. The duration for session timeout and inactivity timeout.

Answer: D

Explanation:

The session policy settings in the Juniper Mist Cloud define how long a user session remains active and how the system manages session expirations due to inactivity. These configurations help ensure both security and efficient resource management across the Mist Cloud portal and API sessions.

According to the Juniper Mist Cloud Administration and Security Configuration Guide:

"Session policy defines session timeout and inactivity timeout parameters, controlling how long users can remain logged into the Mist Cloud portal or API before re-authentication is required."

* Session Timeout: Specifies the maximum duration a session can remain active, regardless of activity.

* Inactivity Timeout: Defines how long a session can remain idle before automatic logout.

These policies help maintain strong access security by reducing the risk of unauthorized access through stale sessions.

Other options such as password complexity (A, C) and two-factor authentication (D) are configured under authentication and access policies, not session policies.

Therefore, the correct answer is B. The duration for session timeout and inactivity timeout.

NEW QUESTION # 43

Which two Mist location tracking components run in the cloud? (Choose two.)

- A. BLE tag
- B. location sensor
- C. location system
- D. location engine

Answer: C,D

Explanation:

Location Engine: The location engine runs in the cloud and processes data from BLE tags and sensors to determine the location of devices within a network. It performs the necessary computations to provide accurate location tracking and analytics.

Location System: The location system, also cloud-based, integrates with the location engine to provide a complete solution for tracking and managing location data within Mist's ecosystem. This system supports various applications such as asset tracking, wayfinding, and proximity-based services.

NEW QUESTION # 44

What is the purpose of assigning roles to switches?

- A. To configure WLANs
- B. To assign configurations at scale
- C. To manage user accounts
- D. To monitor network traffic

Answer: B

Explanation:

In Juniper Mist Wired Assurance, assigning roles to switches is a key configuration mechanism for deploying consistent network policies across multiple devices. Switch roles act as logical identifiers that bind devices to specific configuration templates or policy profiles, ensuring standardized setup and reducing manual configuration overhead.

According to the Juniper Mist Wired Assurance Configuration and Template Management Guide:

"Switch roles are used to group devices based on function or location and automatically apply predefined configuration templates and policies at scale." This enables administrators to:

- * Automatically assign VLANs, port profiles, and policies to multiple switches simultaneously.
- * Simplify deployment for large organizations with multiple sites.
- * Ensure uniform compliance with enterprise configuration standards.

Roles are not used to configure WLANs (wireless function), manage users, or directly monitor traffic - those tasks are handled through other Mist AI services.

Therefore, the correct answer is C. To assign configurations at scale.

NEW QUESTION # 45

What does the icon in the lower-right corner of the exhibit do in the Mist UI?

□

- A. It opens the Marvis site map.
- B. It opens the Marvis Query interface.
- **C. It opens the Marvis Virtual Assistant.**
- D. It opens the Marvis Actions interface.

Answer: C

NEW QUESTION # 46

In Juniper Mist, which three devices send data to the Juniper Mist Cloud? (Choose three.)

- A. RADIUS Server
- **B. Juniper Mist Edge**
- C. Syslog Server
- **D. Access Point**
- **E. Session Smart Router**

Answer: B,D,E

Explanation:

In the Juniper Mist Cloud architecture, data is collected and streamed from various edge devices to the Mist Cloud platform, where AI-driven analytics, automation, and telemetry correlation occur. Only Mist-managed devices that are cloud-connected contribute operational telemetry data to Mist AI for analysis.

According to the Juniper Mist Cloud Architecture and Operations Guide:

"Access Points, Juniper Mist Edge devices, and Session Smart Routers (SSR) communicate directly with the Mist Cloud, sending telemetry, configuration, and analytics data in real time."

* Access Points (B): Provide wireless client telemetry, RF statistics, and user SLE (Service Level Expectation) data.

* Session Smart Routers (C): Supply WAN Assurance and routing analytics, including path and session health data.

* Juniper Mist Edge (D): Acts as an on-premises gateway that forwards data and enables local breakout for Mist Cloud services.

Syslog Servers and RADIUS Servers are external systems and do not send native telemetry to the Mist Cloud—they only interact through authentication or logging integrations.

NEW QUESTION # 47

.....

Our JN0-253 exam material is full of useful knowledge, which can strengthen your capacity for work. As we all know, it is important to work efficiently. So once you have done your work excellently, you will soon get promotion. You need to be responsible for your career development. The assistance of our JN0-253 guide question dumps are beyond your imagination. You will regret if you throw away the good products. One of the significant advantages of our JN0-253 Exam Material is that you can spend less time to pass the exam. People are engaged in modern society. So our goal is to achieve the best learning effect in the shortest time.
