最新的 AVIXA Certification CTS 免費考試真題 (Q160-Q165):

問題 #160

Ambient noise PRIMARILY affects desired sound by

- A. enhancing it.
- B. complementing it.
- C. canceling it out.
- D. interfering with it.

答案： D

解題說明：

Comprehensive Detailed Explanation with all Technology Specialist References:

Ambient noise is any unwanted background sound that can interfere with the clarity and intelligibility of the desired audio signal. In an AV setting, ambient noise can reduce speech intelligibility, making it harder for the audience to understand the speaker or experience the audio as intended.

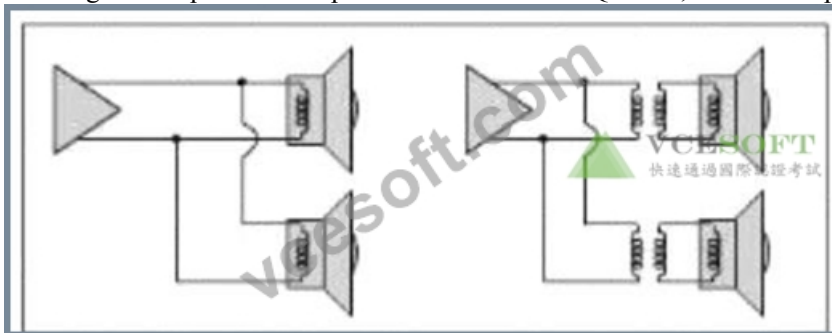

Option B, "canceling it out," would refer to techniques like active noise cancellation, which isn't the primary effect of ambient noise on sound but rather a solution to it. Options A and D, "enhancing" and

"complementing," are not applicable because ambient noise typically detracts from audio quality rather than adding to it.

問題 #161

Assuming that the speakers in the picture on the LEFT are 8 Q drivers, what is the impedance of the speaker system on the left?

- A. 8Q
- B. 4Q
- C. 16 Q
- D. 2Q

答案： D

解題說明：

Assuming the speakers on the left are 8# drivers and they are connected in parallel, the total impedance Z_t can be calculated using the formula for parallel resistance:

$Z_t = \frac{1}{\frac{1}{Z_1} + \frac{1}{Z_2}}$ For two 8# speakers in parallel: $Z_t = \frac{1}{\frac{1}{8} + \frac{1}{8}} = 4\Omega$

Therefore, $Z_t = 4\Omega$. If the wiring in the diagram shows two pairs of 8# speakers connected in parallel, the total impedance is 4# for each pair, and if these pairs are then connected in parallel again, the final impedance is:

$Z_t = \frac{1}{\frac{1}{4} + \frac{1}{4}} = 2\Omega$. Thus, the total impedance is 2#.

問題 #162

Before designing a Wi-Fi network-controlled system, what should the system integrator verify with the final customer?

- A. There are no specific security restrictions.
- B. 5 GHz is not used by another control system.
- C. The lighting control system is not on the same Wi-Fi network.
- D. The access point can work as a DHCP server.

答案： A

解題說明：

Security restrictions can significantly impact the design and implementation of a Wi-Fi network-controlled system. Before proceeding, the integrator must verify with the client that there are no specific security policies or restrictions that could hinder the operation of the AV system over the network.

問題 #163

In the initial stage of determining AV equipment for an installation, the AV team gathers information PRIMARILY to:

- A. Establish a baseline for system performance
- B. Understand the application
- C. Produce schematic drawings of the proposed solution
- D. Prepare a punch (snag or defect) list

答案： B

解題說明：

Before selecting equipment, it's essential to understand how the system will be used. This includes the application (e.g., video conferencing, digital signage, education) and user requirements. This insight drives all design and equipment decisions.

"Understanding the application allows the integrator to tailor the system design to user needs, functionality, and budget."

問題 #164

One way to safeguard individual pieces of equipment in a rack from theft is the use of

- A. a rack shelf.
- B. a password.
- C. security screws.
- D. lacing bars.

答案： C

解題說明：

Security screws are a common method to prevent unauthorized removal of individual equipment from a rack.

They require specialized tools for removal, thereby deterring theft.

The CTS curriculum includes recommendations for securing equipment in racks, with security screws listed as a practical solution to safeguard AV assets against theft.
