Scrum Professional Scrum Product Owner II Sample Questions (Q61-Q66):

NEW QUESTION # 61

Peter, a young member, has been assigned to a mature Scrum Team. He is surprised why the Product Owner keeps paying attention to the technical debt. He supposes it should be the Developers's responsibility.

What is the best explanation? (choose the best answer).

- A. The Product Owner, is used to be a developer, might have a basic understanding of programming. Observing the technical debt could refresh her/his knowledge, and it is useful to develop the product's strategy.
- B. The Product Owner must report the technical debt's status to stakeholders every Sprint Review.
- C. The Product Owner concerns the technical debt because it might impact the delivering value and the product's cost.
- D. Peter is correct. The Product Owner should not concern the technical debt.

Answer: C

NEW QUESTION # 62

Which of the following might be considered when ordering Product Backlog items?

(choose all that apply)

- A. Value of Product Backlog items.
- B. Dependencies to other products.
- C. Dependencies between Product Backlog items.
- D. Cost of implementation.
- E. Cost of delay.

Answer: A,B,C,D,E

Explanation:

According to the PSPO II guide and Scrum.org competencies, when ordering Product Backlog items, a Product Owner should consider various factors to maximize the value of the work done by the Scrum Team.

These factors include:

- * A. Dependencies to other products: Recognizing dependencies to other products is crucial for the Product Owner to ensure that the Scrum Team is working on items that can be completed and deliver value without being blocked by external dependencies.
- * B. Value of Product Backlog items: The primary role of a Product Owner is to maximize the value delivered by the Scrum Team, and ordering items based on their value is a fundamental aspect of this responsibility.
- * C. Dependencies between Product Backlog items: Understanding and managing dependencies between Product Backlog items helps in planning Sprints more effectively, ensuring that the team is working on items in a logical sequence.
- * D. Cost of delay: The cost of delay is a critical economic factor that influences the ordering of Product Backlog items. Items that would result in a higher cost if delayed should be prioritized.
- * E. Cost of implementation: While value maximization is the goal, the cost of implementation cannot be ignored. Balancing the cost and the expected value is essential for effective Product Backlog management.

These considerations are in line with the Scrum.org Professional Scrum competencies, particularly under ' Managing Products with Agility ', where it ' s emphasized that Product Owners should have a deep understanding of market value, product feasibility, and the importance of making trade-offs to maximize value.

NEW QUESTION # 63

Who is accountable for maintaining and communicating the Product Goal?

(choose the best answer)

- A. Stakeholders.
- B. Executive Sponsors.
- C. All of the above.
- **D. The Product Owner.**
- E. The Developers.

Answer: D

Explanation:

The Product Owner is accountable for maintaining and communicating the Product Goal. This responsibility includes ensuring that the goal is visible to everyone and provides direction and purpose for the Scrum Team and its stakeholders

NEW QUESTION # 64

The environment in which a product will be used changes and emerges continually. What is the effect on the Product Backlog?
(choose the best answer)

- **A. The Product Backlog evolves to reflect what the product needs to be most valuable.**
- B. There is no effect, the Product Backlog must stay the same until the end of the project.
- C. The Product Backlog is archived and a new Product Backlog is created to take its place
- D. The requirements specification document, describing the Product Backlog items, must be updated to ensure stability.

Answer: A

Explanation:

* Option B is the best answer because it reflects the agile and empirical nature of Scrum and Product Ownership. The Product Backlog is a living artifact that represents the current understanding of what the product needs to be most valuable for the customers and the stakeholders¹. The Product Backlog is not a fixed or static document, but rather an emergent and dynamic one that adapts to the changing environment, needs, and feedback. The Product Owner is accountable for managing the Product Backlog and ensuring that it is transparent, ordered, and refined². The Product Owner collaborates with the Scrum Team and the stakeholders to inspect and adapt the Product Backlog items based on the new insights, opportunities, and learnings that arise from the changing environment^{3,4}. The Product Owner also uses various techniques, such as product vision, value proposition, user stories, experiments, and evidence-based management, to define, validate, and prioritize the Product Backlog items⁵.

* Option A is not the best answer because it contradicts the agile and empirical nature of Scrum and Product Ownership. The Product Backlog is not a requirements specification document, but rather a list of hypotheses and assumptions that need to be tested and validated in the real world⁵. The Product Backlog items are not detailed or fixed upfront, but rather refined and clarified as they get closer to implementation². Updating the requirements specification document to ensure stability implies a plan-driven and predictive approach that does not embrace change and feedback, and that does not optimize value delivery.

* Option C is not the best answer because it contradicts the agile and empirical nature of Scrum and Product Ownership. The Product Backlog is not a project plan, but rather a product roadmap that guides the development of the product. The Product Backlog does not have a predefined end date or scope, but rather evolves and changes as the product grows and matures¹. Keeping the Product Backlog the same until the end of the project implies a plan-driven and predictive approach that does not embrace change and feedback, and that does not optimize value delivery.

* Option D is not the best answer because it contradicts the agile and empirical nature of Scrum and Product Ownership. The Product Backlog is not a disposable artifact, but rather a cumulative and iterative one that builds on the previous work and learnings¹. The Product Backlog items are not discarded or replaced, but rather refined and updated as the product evolves and changes². Archiving the Product Backlog and creating a new one implies a disruptive and wasteful approach that does not leverage the existing knowledge and feedback, and that does not optimize value delivery.
