問題 #128

Which statement is NOT true regarding the Managing Units of Measure setup task?

- A. You must define Unit of measure class with a base unit of measure.
- B. A unit of measure conversion is a mathematical relationship between two different units of measure.
- C. If you want to transact items in units of measure that belong to classes other than their primary UOM class, you must define conversions between the base units of measure in different UOM classes.
- D. Conversions between classes are unique for each item, whereas the conversion rate varies for intraclass unit of measure.

答案： D

解題說明：

Conversions between classes are unique for each item, whereas the conversion rate varies for intraclass unit of measure.

This statement is not true because conversions between classes are not unique for each item, but are common across all items in the same item class¹. The conversion rate does not vary for intraclass unit of measure, but is fixed at 1:1². A unit of measure class is a group of units of measure that share a common base unit of measure, such as length, weight, or volume³. You must define a unit of measure class with a base unit of measure before you can define other units of measure in the same class⁴. A unit of measure conversion is a mathematical relationship between two different units of measure, such as 1 inch = 2.54 centimeters. You must define conversions between the base units of measure in different unit of measure classes if you want to transact items in units of measure that belong to classes other than their primary unit of measure class.

問題 #129

A company manufactures and ships industrial water filters from its only factory unit in India.

Which four types of lead time can the company use to create promising rules in lead-time promising mode?

- A. User-defined lead time
- B. Processing lead time
- C. Total lead time
- D. Supplier lead time
- E. Cumulative manufacturing lead time
- F. Cumulative total lead time
- G. Transit lead time

答案： A,B,E,G

解題說明：

Oracle Order Management Cloud Order to Cash supports four types of lead time that can be used to create promising rules in lead-time promising mode¹. These are:

* Transit lead time: The time required to ship the item from the source location to the destination location.

* Processing lead time: The time required to process the item at the source location before shipping it.

* User-defined lead time: The time that you can define for any specific purpose, such as quality inspection, packaging, or customs clearance.

* Cumulative manufacturing lead time: The total time required to manufacture the item from its raw materials or components.

問題 #130

Your company is implementing Order Management Cloud to manage the sales orders but fulfillment happens through third party logistics (3PL).

What process should be executed to communicate to the 3PL system that the sales orders are ready to pick release and ship?

- A. Confirm Shipments
- B. Create Shipments
- C. Generate Shipments Request
- D. Manage Shipments Interface
- E. Send Shipments Advice

答案： C

解題說明：

問題 #131

You are in the process of setting up a constraint that prohibits update to an extensible flexfield in a fulfillment line if Ship From Warehouse is X and the fulfillment line is booked. You are able to see the extensible flexfield on the "Manage Constraint Entities" page but not on the "Manage Processing Constraints" page.

What could be the reason?

- A. The "Publish extensible flexfield" process was not run.
- B. The "generate packages" program was not submitted.
- C. The extensible flexfield is not enabled.
- D. A "Record Set" needs to be created for the extensible flexfield to be visible on the "Manage Processing Constraints" page.

答案: D

解題說明:

A record set is a group of records that are bound by common attribute values for the purpose of constraint evaluation. You can define conditions and specify a record set to be validated for a given condition as defined by the validation template.
