312-49v11最新題庫 - 312-49v11考題資訊

在這個人才濟濟的社會裏，你不覺得壓力很大嗎，不管你的學歷有多高，它永遠不代表實力。學歷只是一個敲門磚，而實力確是你穩固自己地位的基石。EC-COUNCIL的312-49v11考試認證就是一個流行的IT認證，很多人都想擁有它，有了它就可以穩固自己的職業生涯，NewDumps EC-COUNCIL的312-49v11考試認證培訓資料是個很好的培訓工具，它可以幫助你成功的通過考試而獲得認證，有了這個認證，你將得到國際的認可及接受，那時的你再也不用擔心被老闆炒魷魚了。

最新的 Certified Ethical Hacker 312-49v11 免費考試真題 (Q39-Q44):

問題 #39
You are employed directly by an attorney to help investigate an alleged sexual harassment case at a large pharmaceutical manufacturer. While at the corporate office of the company, the CEO demands to know the status of the investigation. What prevents you from discussing the case with the CEO?

- A. The attorney-work-product rule
- B. Trade secrets
- C. ISO 17799
- D. Good manners

答案：A

問題 #40
During a forensic investigation into suspicious activities within an organization's AWS environment, the investigator uses Amazon CloudWatch to adjust the storage duration of specific log data sets. This action is crucial for managing the lifespan of logs and

ensuring that critical logs are preserved for further analysis during the investigation. Which feature of Amazon CloudWatch is the investigator using in this scenario?

- A. Searches and analyzes log data efficiently using CloudWatch Logs Insights.
- B. Analyzes and monitors systems and applications through the log data.
- C. Modifies retention policies for individual log groups.
- D. Sets notification alerts for specific API activities for further investigation and troubleshooting.

答案：C

解題說明：
Under the CHFI v11 objectives related toCloud ForensicsandAWS Forensics, log preservation is a critical requirement for effective investigation and legal admissibility. In Amazon Web Services,CloudWatch Logs retention policiesallow investigators to control how long log data is stored before it is automatically deleted.
Modifying retention policies for individual log groups ensures that relevant forensic artifacts-such as authentication logs, API activity records, and system events-remain available for analysis throughout the investigation lifecycle.
In this scenario, the investigator's goal is not to analyze or query logs immediately, but toextend or manage the lifespan of log dataso that it is not lost due to default retention limits. This aligns precisely with the feature that allows investigators tomodify retention policies for individual log groups. CHFI v11 highlights the importance of preserving cloud-based evidence early, as cloud logs may be ephemeral and subject to automatic deletion if not properly configured.
Option A refers to general monitoring capabilities, while Option B focuses on querying and searching log data using Logs Insights-both are analytical functions, not retention management. Option D involves alerting mechanisms and does not control log storage duration.
The CHFI Exam Blueprint v4 explicitly includeslogs in AWS and cloud evidence acquisition, emphasizing retention configuration as a key forensic readiness and investigation task, making Option C the correct and exam-aligned answer

問題 #41
A large multinational corporation, specializing in financial services, recently experienced a potential data breach that affected their critical business systems. As part of the forensic investigation, the organization must quickly restore its servers, both fully and at a granular level, to determine the extent of the breach and verify the integrity of sensitive financial data. The forensic team needs a comprehensive and reliable tool that can perform full image-level backups of their servers, as well as allow for selective file and folder restores in order to investigate individual systems and recover specific documents and configuration files. The tool should be able to handle both physical and virtual environments efficiently, ensuring minimal downtime and accurate data recovery.
Given the organization's need for rapid and reliable recovery, the forensic team must choose a tool that can restore entire systems in case of failure while also offering the flexibility to restore individual files or folders from the backup image. This capability is critical for isolating the compromised systems and recovering vital business records that may have been affected by the breach. The organization requires a solution that not only restores data but also provides the ability to maintain business continuity during the investigation, ensuring that systems are up and running as quickly as possible while maintaining forensic integrity.
Which of the following forensic tools would be best suited for this task?

- A. Ezvid
- B. Snagit
- C. VMware vSphere Hypervisor
- D. Macrium Reflect Server

答案：D

解題說明：
This scenario directly aligns with CHFI v11 objectives underData Acquisition and DuplicationandDigital Forensic Imaging and Recovery Tools. In large-scale enterprise investigations-especially within financial institutions-CHFI v11 emphasizes the importance of tools that supportfull disk imaging, rapid system recovery, and granular restorationto ensure both forensic analysis and business continuity.
Macrium Reflect Serveris specifically designed for server environments and supports full image-level backups, differential and incremental imaging, and selective file and folder recovery from forensic images.
This allows investigators to restore entire systems to operational status quickly while simultaneously extracting specific files, logs, or configuration data needed to assess breach impact and verify data integrity.
Importantly, Macrium Reflect supports both physical and virtual systems, making it suitable for complex enterprise infrastructures.
Snagit and Ezvid are multimedia screen-recording tools with no forensic or recovery capability, while VMware vSphere Hypervisor is a virtualization platform rather than a forensic imaging or recovery solution.
CHFI v11 stresses that appropriate tool selection is critical to preserving evidence integrity while minimizing operational downtime.

Therefore,Macrium Reflect Serveris the most suitable and CHFI-aligned tool for rapid, reliable, and forensically sound system and data recovery in this scenario.

問題 #42
In a large software development company, an investigation conducted into an incident of source code theft. The initial investigation hints at an insider being responsible. The inquiry should validate the breach, pinpoint the method of its execution and compile proof that can stand up in court. Considering the case details and the goal of the inquiry, what investigative approach should be taken that would serve best?

- A. A criminal investigation, with the onus on law enforcement to prove guilt
- B. An administrative investigation limited to identifying policy or protocol violations
- C. A civil investigation focusing on mutual understanding between involved parties
- D. A mix of civil and criminal investigations, taking the strengths from both

答案：D

問題 #43
Harold is finishing up a report on a case of network intrusion, corporate spying, and embezzlement that he has been working on for over six months. He is trying to find the right term to use in his report to describe network-enabled spying. What term should Harold use?

- A. Netspionage
- B. Spynet
- C. Spycrack
- D. Hackspionage

答案：A

問題 #44
