## Microsoft Implementing Data Engineering Solutions Using Microsoft Fabric Sample Questions (Q62-Q67):

### NEW QUESTION # 62

You have a Fabric capacity that contains a workspace named Workspace1. Workspace1 contains a lakehouse named Lakehouse1, a data pipeline, a notebook, and several Microsoft Power BI reports.

A user named User1 wants to use SQL to analyze the data in Lakehouse1.

You need to configure access for User1. The solution must meet the following requirements:

Provide User1 with read access to the table data in Lakehouse1.

Prevent User1 from using Apache Spark to query the underlying files in Lakehouse1.

Prevent User1 from accessing other items in Workspace1.

What should you do?

- A. Assign User1 the Viewer role for Workspace1. Share Lakehouse1 with User1 and select Read all SQL endpoint data.
- B. Assign User1 the Member role for Workspace1. Share Lakehouse1 with User1 and select Read all SQL endpoint data.

- C. Share Lakehouse1 with User1 directly and select Build reports on the default semantic model.
- D. Share Lakehouse1 with User1 directly and select Read all SQL endpoint data.

**Answer: D**

### NEW QUESTION # 63

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Fabric eventstream that loads data into a table named Bike\_Location in a KQL database. The table contains the following columns:

You need to apply transformation and filter logic to prepare the data for consumption. The solution must return data for a neighbourhood named Sands End when No\_Bikes is at least 15. The results must be ordered by No\_Bikes in ascending order.

Solution: You use the following code segment:

```
bike_location
| filter Neighbourhood == "Sands End" and No_Bikes >= 15
| sort by No_Bikes asc
| project BikepointID, Street, Neighbourhood, No_Bikes, No_Empty_Docks, Timestamp
```

Does this meet the goal?

- A. no
- B. Yes

**Answer: B**

Explanation:

Filter Condition: It correctly filters rows where Neighbourhood is "Sands End" and No\_Bikes is greater than or equal to 15.

Sorting: The sorting is explicitly done by No\_Bikes in ascending order using sort by No\_Bikes asc.

Projection: It projects the required columns (BikepointID, Street, Neighbourhood, No\_Bikes, No\_Empty\_Docks, Timestamp), which minimizes the data returned for consumption.

### NEW QUESTION # 64

You have a Fabric workspace that contains a warehouse named Warehouse1. Warehouse1 contains a table named Customer.

Customer contains the following data.

- B. queryinsights.long\_running\_queries
- C. sys.dm\_exec\_connections
- D. sys.dm\_exec\_requests
- E. sys.dm\_exec\_sessions

Answer: E
