The information of DumpsMaterials can ensure you pass your first time to participate in the Huawei Certification H13-527_V5.0 Exam.

Huawei HCIP-Cloud Computing V5.0 Sample Questions (Q31-Q36):

NEW QUESTION # 31

In Huawei Cloud Stack, which of the following descriptions of measurement indicators are correct? (Multiple choice)

- A. Measurement statistics start after the resource is successfully created.
- B. When the elastic cloud server's specification startup source is a local disk, it will still be measured after shutting down.
- C. When the elastic cloud server's specification startup source is a local disk, metering will stop after shutting down.
- D. Metering statistics start after the resource is created and locked.

Answer: A,B,D

NEW QUESTION # 32

Which of the following is not a core concept of OpenStack?

- A. Scalability
- B. Efficiency
- C. Flexibility
- D. Openness

Answer: B

Explanation:

OpenStack is widely recognized for its openness, flexibility, and scalability. Official OpenStack documentation describes OpenStack as an open-source cloud platform that allows organizations to integrate different technologies and build clouds with a high degree of flexibility. It also explicitly highlights horizontal scalability, meaning compute, storage, and network resources can be expanded as demand grows.

In addition, OpenStack and related OpenInfra materials consistently emphasize openness as a defining characteristic of the platform. By contrast, efficiency is certainly a benefit that cloud platforms may deliver, but it is not typically presented as one of the foundational core concepts of OpenStack in the same way as openness, flexibility, and scalability. Huawei-authored OpenStack content also discusses OpenStack in terms of openness and scalability, which aligns with the standard industry description rather than listing efficiency as a core concept.

Therefore, among the options given, Efficiency is the one that is not considered a core concept of OpenStack.

NEW QUESTION # 33

In Huawei Cloud Stack, when a user applies for an elastic file system service, which of the following component interfaces will be called by the SFS Console to deliver the request to the storage device?

- A. Cinder
