The OGEA-103 (TOGAF Enterprise Architecture Combined Part 1 and Part 2) Certification Exam is a comprehensive exam that tests a candidate's knowledge and understanding of the entire TOGAF framework. OGEA-103 exam is designed for enterprise architects, IT managers, and other professionals who are responsible for designing and implementing enterprise architecture solutions. OGEA-103 Exam is rigorous and requires candidates to have a deep understanding of the TOGAF framework and the ability to apply that knowledge in real-world situations.

The Open Group TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam Sample Questions (Q91-Q96):

NEW QUESTION # 91

Which of the following is included as part of Architecture Governance?

- A. Creating and maintaining the Statement of Architecture Work through out the ADM cycle
- B. Managing Stakeholders and their requirements
- C. Ensuring compliance with internal and external standards and regulatory obligations
- D. Interacting with the CxO level on Enterprise Architecture

Answer: C

Explanation:

Ensuring compliance with internal and external standards and regulatory obligations is one of the activities included as part of Architecture Governance. Architecture Governance is the practice and orientation by which enterprise architectures and other architectures are managed and controlled at an enterprise-wide level. It involves establishing processes, roles, responsibilities, policies, and standards to ensure that architectures are aligned with the enterprise's strategy and objectives, and meet the quality and performance requirements. Reference: The TOGAF® Standard | The Open Group Website, Section 3.3.6 Architecture Governance.

NEW QUESTION # 92

What are the four dimensions used to scope an architecture?

- A. Strategy Segment Capability Budget
- B. Business Data Application Technology
- C. Strategy Portfolio Project Solution Delivery
- D. Breadth Depth Time Period Architecture Domains

Answer: D

Explanation:

The four dimensions used to scope an architecture are Breadth, Depth, Time Period, and Architecture Domains¹, p. 8.

Breadth refers to the extent of the enterprise covered by the architecture, which can range from a specific business unit to the entire organization¹, p. 8.

Depth refers to the level of detail and completeness of the architecture, which can vary depending on the purpose, scope, and stakeholders of the architecture¹, p. 8.

Time Period refers to the temporal aspects of the architecture, such as the current state, the target state, and the transition plan¹, p. 8.

Architecture Domains refers to the classification of the architecture into four domains: Business, Data, Application, and Technology¹, p. 8.

These four dimensions help define the scope and boundaries of the architecture and ensure that it meets the needs and expectations of the stakeholders.

NEW QUESTION # 93

Exhibit:

Consider the image showing basic architectural concepts.

What are items A and B?

- A. A-Stakeholder, B-Concern
- B. A-User, B-Requirement
- C. A-Candidate Architecture, B-Trade-off
- D. A-Base Architecture, B-Target Architecture

Answer: A

Explanation:

In the context of TOGAF, a stakeholder is any individual, team, or organization who has interests in, or concerns relative to, the outcome of the architecture. Concerns are those interests which pertain to any aspect of the system's functioning, development or operation, including considerations such as performance, reliability, and security¹. References:

NEW QUESTION # 94

What component of the Architecture Repository represents architecture requirements agreed with the Architecture Board?

- A. Architecture Requirements Repository
- B. Architecture Capability
- C. Reference Library
- D. Governance Log

Answer: A

Explanation:

The Architecture Requirements Repository stores all the requirements that are output of the architecture development cycle, as well as the requirements that are input to the architecture development cycle¹. The Architecture Requirements Repository includes the following types of requirements¹:

* Stakeholder Requirements: These are the high-level requirements and expectations of the stakeholders, derived from the business drivers, goals, and objectives. They are captured and refined in the Architecture Vision phase and the Requirements Management phase.

* Architecture Requirements: These are the detailed requirements that specify what the architecture must do or deliver to meet the stakeholder requirements. They are derived and refined in the Business, Information Systems, and Technology Architecture phases.

* Implementation and Migration Requirements: These are the detailed requirements that specify what the implementation and migration projects must do or deliver to realize the architecture. They are derived and refined in the Opportunities and Solutions and Migration Planning phases.

The Architecture Requirements Repository is used to manage the architecture requirements throughout the architecture lifecycle, ensuring their traceability, consistency, and compliance¹. The Architecture Board is the authority that reviews and approves the architecture requirements, as well as the architecture deliverables and artifacts, as part of the architecture governance process².

NEW QUESTION # 95

Which one of the following classes of information within the Architecture Repository would typically contain a list of the applications in use within the enterprise?

- A. Architecture Metamodel
- B. Architecture Landscape
- C. Reference Library
- D. Governance Log

Answer: B

Explanation:

The Architecture Landscape is a class of information within the Architecture Repository that shows an architectural view of the building blocks that are in use within the organization today (the Baseline Architecture), as well as those that are planned for the future (the Target Architecture). The Architecture Landscape typically contains a list of the applications in use within the enterprise, along with their relationships and dependencies, as well as other relevant architectural information. The Architecture Landscape helps to identify opportunities for re-use, consolidation, or retirement of existing applications, as well as gaps or overlaps in the current or future architecture. Reference: : The TOGAF Standard, Version 9.2, Part IV: Architecture Content Framework, Chapter 34: Architecture Landscape : The TOGAF Standard, Version 9.2, Part VI: Architecture Capability Framework, Chapter 47: Architecture Repository
