Analytics-Admn-201 Study Materials & Analytics-Admn-201 Exam Braindumps & Analytics-Admn-201 Dumps Torrent

Our customers comment that the Analytics-Admn-201 latest dumps pdf covers most questions of actual test. Most questions in our Analytics-Admn-201 dumps valid will appear in the real test because Salesforce exam prep is created based on the formal test. If you practice the Analytics-Admn-201 Test Questions and remember the key points of study guide, the rate of you pass will reach to 95%.

Salesforce Certified Tableau Server Administrator Sample Questions (Q17-Q22):

NEW QUESTION # 17

You use Tableau Desktop 10.5 and plan to publish a visualization to a Tableau Server that runs version 2020.1. You are assigned the Creator site role, and Publisher permissions for a project. What statement correctly describes what happens when you attempt to publish the visualization?

- A. You will see a warning message instructing you that embedded .tde extracts will be upgraded to .hyper
- B. You will see an error message instructing you that you are unable to publish the workbook to a newer version of Tableau Server
- C. You will successfully publish the visualization without any errors or warnings
- D. You will see a warning message instructing you that the workbook will be upgraded to a new version

Answer: A

Explanation:

Tableau Desktop and Tableau Server have versioning considerations when publishing content, particularly regarding compatibility between older Desktop versions (e.g., 10.5) and newer Server versions (e.g., 2020.1).

Let's break this down step-by-step:

* Version Context: Tableau Desktop 10.5 was released in 2017 and used the .tde (Tableau Data Extract) format for extracts.

Tableau Server 2020.1, released in 2020, introduced the .hyper extract format (starting with version 10.5, but fully standardized later). When publishing from an older Desktop version to a newer Server version, Tableau ensures backward compatibility but may upgrade certain components.

* Publishing Process: With a Creator site role and Publisher permissions, you have the rights to publish workbooks to the specified project. Tableau Server accepts workbooks from older Desktop versions (e.g., 10.5) and upgrades them to the current Server version (2020.1) during publishing. This process is seamless for the workbook itself, but extracts require special handling.

* Extract Handling: If the workbook contains embedded .tde extracts (stored within the .twb or .twbx file), Tableau Server 2020.1 converts these to .hyper format upon publishing. This conversion is necessary because .hyper replaced .tde as the default extract engine starting in Tableau 10.5 and beyond, offering better performance and scalability. During this process, Tableau Desktop or Server displays a warning to inform the user of the upgrade, as it's a one-way conversion (you can't revert to .tde on the Server).

Now, let's evaluate the options:

* Option A (You will successfully publish without any errors or warnings): Incorrect. While the publishing succeeds, a warning about the .tde to .hyper conversion appears if the workbook contains embedded extracts. Without extracts, no warning occurs, but the question's context implies extracts are likely involved (common in visualizations).

* Option B (Error message: unable to publish to a newer version): Incorrect. Tableau supports publishing from older Desktop versions to newer Server versions. There's no outright error blocking this; compatibility is maintained.

* Option C (Warning: embedded .tde extracts will be upgraded to .hyper): Correct. This is the precise warning displayed when a workbook with .tde extracts is published to a Server version that uses .hyper. It ensures the user is aware of the format change, which might affect extract refresh schedules or performance expectations.

* Option D (Warning: workbook will be upgraded to a new version): Partially correct but less specific. The workbook is upgraded to 2020.1 compatibility, but the warning focuses on the extract format change (.tde to .hyper), not the workbook version generically. Option C is more accurate.

Why This Matters: The .tde to .hyper shift improves query performance and supports larger datasets, but users need to know about it for planning (e.g., extract refresh schedules might need adjustment). The warning ensures transparency.

NEW QUESTION # 18

A user named John publishes a workbook named Sales Quota to a project named Sales. The All Users group has the View and Download Workbook/Save As capabilities only to the Sales project. A user named Sandy has the Explorer (can publish) site role, on the Sales Quota workbook. No other users or groups have permissions to the Sales project. The Sales project is set to Managed by the owner. What are the effective rights for Sandy?

- **A. View and Download Workbook/Save As**
- B. All of the capabilities associated with the Editor rule
- C. The same rights as John
- D. No access

Answer: A

NEW QUESTION # 19

You have an installation of Tableau Server and a site that are configured to use default settings. What should you do to ensure that the users on the site can set up data-driven alerts?

- A. No action is necessary: the default settings enable data-driven alerts for the site
- **B. Change the data-driven alerts setting on the new site's Settings page**
- C. Enable data-driven alerts on the Tableau Services Manager Configuration page
- D. Run the tsm configuration set -k dataAlerts.checkIntervallnMinutes -v 60 command

Answer: B

Explanation:

Data-driven alerts in Tableau Server allow users to receive notifications when data in a view meets certain conditions (e.g., a sales metric exceeds a threshold). By default, this feature is disabled for a site unless explicitly enabled by an administrator.

Option C (Change the data-driven alerts setting on the new site's Settings page): This is the correct answer. In the Tableau Server web interface, a site administrator can navigate to the site's Settings > General page and enable the option "Let users create data-driven alerts." This must be done manually because the default setting for a new site is disabled. Once enabled, users with appropriate permissions (e.g., Viewer, Explorer, or Creator roles) can create alerts on views they have access to.

Option A (Enable data-driven alerts on the TSM Configuration page): This is incorrect because the TSM Configuration page (accessed via the TSM web UI or CLI) manages server-wide settings like ports, authentication, and processes, not site-specific features like data-driven alerts.

Option B (Run the tsm configuration set -k dataAlerts.checkIntervalInMinutes -v 60 command): This is incorrect. The dataAlerts.checkIntervalInMinutes key controls how frequently Tableau Server checks alert conditions (default is 60 minutes), but it does not enable the feature itself. The feature must first be turned on at the site level.

Option D (No action is necessary): This is incorrect because the default setting for data-driven alerts is off for new sites, requiring explicit action to enable it.

Reference: Tableau Server Documentation - "Configure Data-Driven Alerts" (https://help.tableau.com/current/server/en-us/data_alerts.htm).

NEW QUESTION # 20

What command should you run to update the automatically-generated secrets that are created during a Tableau Server installation?

- A. tsm data-access caching set -r 1
- B. tsm licenses refresh
- C. tsm security validate-asset-keys
- **D. tsm security regenerate-internal-tokens**

Answer: D

Explanation:

Tableau Server uses internal secrets (tokens) for secure communication between its processes (e.g., Repository, File Store). These are automatically generated during installation and can be regenerated if compromised or for security maintenance. The command to update these is:

* tsm security regenerate-internal-tokens: This regenerates the internal security tokens, ensuring all processes use the new tokens after a restart.

* Option C (tsm security regenerate-internal-tokens): Correct. This is the documented command for updating internal secrets.

* Option A (tsm data-access caching set -r 1): Incorrect. This command configures caching behavior, not security tokens.

* Option B (tsm licenses refresh): Incorrect. This refreshes license data, unrelated to internal secrets.

* Option D (tsm security validate-asset-keys): Incorrect. This validates encryption keys for assets, not internal tokens.

Reference: Tableau Server Documentation - "Regenerate Internal Tokens" (https://help.tableau.com/current/server/en-us/cli_security.htm#regenerate-internal-tokens).

NEW QUESTION # 21

You have an existing group subscription. You add a user to the group. What statement correctly describes the result?

- A. The creator of the subscription receives notice of the change and must manually edit the subscription to reflect the new group membership
- B. The administrator receives a notice to approve or deny adding the user to the subscription
- **C. The subscription updates automatically to include the new user**
- D. The subscription will continue to include only the members of the group at the time the subscription was made

Answer: C

Explanation:

Subscriptions in Tableau Server deliver workbook views to users via email on a schedule. Group subscriptions apply to all group members-let's unpack this:

* Group Subscription Mechanics:

* Created via Workbooks > Actions > Subscribe > Select Group.

- * Delivers content to all users in the group at the time the subscription runs (e.g., daily PDF).
 - * Dynamic: Membership updates (additions/removals) are reflected automatically on the next run.
 - * Option C (The subscription updates automatically to include the new user): Correct.
 - * Details: When you add a user to the group (e.g., via Users > Groups > Add Users), Tableau Server's subscription process queries the group's current membership at runtime. The new user receives the subscription on the next scheduled delivery-no manual action needed.
 - * Example: Group "Sales" has a 9 AM subscription. Add a user at 8 AM-they get the email tomorrow at 9 AM.
 - * Option A (Admin receives notice to approve/deny): Incorrect.
 - * Why: No approval workflow exists for group membership changes in subscriptions-it's automatic.
 - * Option B (Creator must manually edit): Incorrect.
 - * Why: Subscriptions are tied to the group, not a static user list-manual edits aren't required for membership changes.
 - * Option D (Only members at creation time): Incorrect.
 - * Why: This would be true for individual subscriptions (static list), but group subscriptions are dynamic.
- Why This Matters: Dynamic group subscriptions streamline content delivery as teams evolve, reducing admin overhead.
 Reference: Tableau Server Documentation - "Manage Subscriptions" (<https://help.tableau.com/current/server/en-us/subscribe.htm>).

NEW QUESTION # 22

.....

You will identify both your strengths and shortcomings when you utilize TestKingIT Salesforce Analytics-Admn-201 practice exam software. You will also face your doubts and apprehensions related to the Salesforce Analytics-Admn-201 exam. Our Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) practice test software is the most distinguished source for the Salesforce Analytics-Admn-201 exam all over the world because it facilitates your practice in the practical form of the Salesforce Analytics-Admn-201 certification exam.

Analytics-Admn-201 Test Certification Cost: <https://www.testkingit.com/Salesforce/latest-Analytics-Admn-201-exam-dumps.html>

Then we outfit practice exam materials with the highest level expert team who checks the database every day and update the questions regularly to ensure you get the newest and the highest quality Analytics-Admn-201 exam dump, As long as you have paid for our Salesforce Analytics-Admn-201 Test Certification Cost Analytics-Admn-201 Test Certification Cost - Salesforce Certified Tableau Server Administrator latest prep questions, you can download the exam files immediately since our staff will send them to your mail boxes in no time, If you decide to use our Analytics-Admn-201 test torrent, we are assured that we recognize the importance of protecting your privacy and safeguarding the confidentiality of the information you provide to us.
