Cisco Automating and Programming Cisco Collaboration Solutions Sample

Questions (Q24-Q29):

NEW QUESTION # 24

Refer to the exhibit. A network engineer is expecting the collector to initiate a gRPC session to the router. To accomplish this task, a subscription is specified. A Cisco IOS XR device was configured using the details in the exhibit. When the code is applied, the session is not initiated.

What is the issue?

□

- A. The destination group must be configured.
- B. The subscription must be configured
- C. The proper sensor-path must be configured.
- D. The sample-interval has an incorrect value

Answer: A

Explanation:

A destination group (collector address/port) must be configured for the telemetry data to be sent from the router to the collector. Without this, the subscription cannot deliver telemetry data.

NEW QUESTION # 25

Drag and Drop Question

Drag and drop the code snippets from the bottom onto the blanks in the code to add a loopback interface on a Cisco IOS XE device through RESTCONF. Not all options are used.

□

Answer:

Explanation:

□

Explanation:

□

NEW QUESTION # 26

Drag and Drop Question

Drag and drop the code snippets from the bottom onto the boxes in the code to construct a Cisco NSO service template that configures the Cisco IOS XE interface description for all interfaces.

Not all options are used.

□

Answer:

Explanation:

□

Explanation:

□

NEW QUESTION # 27

Refer to the exhibit. XTC has been configured by an engineer. What does the IPv4 address represent on the snippet?

□

- A. local address of the router on which it listens for PCEP
- B. configured for the remote peer for state synchronization
- C. configured for the local peer for state synchronization
- D. destination address of the router on which it listens for PCEP

Answer: A

NEW QUESTION # 28

What is a feature of the Service Manager component of Cisco NSO?

- A. It performs model-to-model mapping of device models to service models.

- Answer: B**

The Service Manager component of Cisco NSO supports the preview of configuration when creating or modifying a service instance, allowing users to see the changes before they are applied.
