High quality and accuracy AZ-800 Exam Materials with reasonable prices can totally suffice your needs about the exam. All those merits prefigure good needs you may encounter in the near future.

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q64-Q69):

NEW QUESTION # 64

Your network contains an Active Directory Domain Services (AD DS) forest named contoso.com. The forest contains a child domain named east.contoso.com.

in the contoso.com domain, you create two users named Admin1 and Admin2.

You need to ensure that the users can perform the following tasks:

- * Admin1 can create and manage Active Directory sites.
- * Admin2 can deploy domain controller to the east.contoso.com domain.

The solution must use the principle of least privilege.

To which group should you add each user? To answer, select the appropriate options in the answer area.

NOTE Each correct selection is worth one point.

□

Answer:

Explanation:

□

NEW QUESTION # 65

You have a Windows Server container host named Server1 that has a single disk.

On Server1, you plan to start the containers shown in the following table.

Which isolation mode can you use for each container? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 66

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are planning the deployment of DNS to a new network.

You have three internal DNS servers as shown in the following table.

The contoso.local zone contains zone delegations for east.contoso.local and west.contoso.local. All the DNS servers use root hints.

You need to ensure that all the DNS servers can resolve the names of all the internal namespaces and internet hosts.

Solution: On Server2, you create a conditional forwarder for contoso.local and west.contoso.local. On Server3, you create a conditional forwarder for contoso.local and east.contoso.local.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION # 67

You have servers that run Windows Server 2022 as shown in the following table.

Server2 contains a .NET app named App1.

You need to establish a WebSocket connection from App1 to the SQL Server instance on Server1. The solution must meet the following requirements:

* Minimize the number of network ports that must be open on the on-premises network firewall.

* Minimize administrative effort.

What should you create first?

- A. an Azure VPN gateway
- B. a hybrid connection
- C. an Azure Relay namespace
- D. a WFC relay connection

Answer: B

NEW QUESTION # 68

You have an on-premises server named Server1 that runs Windows Server.

You have an Azure subscription that contains a virtual network named VNet1.

You need to connect Server1 to VNet1 by using Azure Network Adapter.
What should you use?

- A. Azure AD Connect
- **B. Windows Admin Center**
- C. Device Manager
- D. the Azure portal

Answer: B

Explanation:

Using Azure Network Adapter to connect to a virtual network requires the following:

- An Azure account with at least one active subscription.
- An existing virtual network.
- Internet access for the target servers that you want to connect to the Azure virtual network.
- A Windows Admin Center connection to Azure. To learn more, see [Configuring Azure integration](#).
- The latest version of Windows Admin Center. To learn more, see [Windows Admin Center](#).
