Arch-302テスト資料 & Arch-302日本語版対応参考書

もしArch-302認定試験を受験したいなら、Arch-302試験参考書が必要でしょう。ターゲットがなくてあちこち参考資料を探すのをやめてください。どんな資料を利用すべきなのかわからないとしたら、PassTestのArch-302問題集を利用してみましょう。この問題集は的中率が高く、あなたの一発成功を保証できますから。ほかの試験参考書より、この問題集はもっと正確に実際問題の範囲を絞ることができます。こうすれば、この問題集を利用して、あなたは勉強の効率を向上させ、十分にArch-302試験に準備することができます。

Salesforce Certified B2C Solution Architect 認定 Arch-302 試験問題 (Q23-Q28):

質問 # 23

A telecommunications company is implementing Service Cloud and Experience Cloud with a goal to have a single view of their customers. Current system limitations have resulted in many duplicate and incomplete customer records with inadequate data quality in the millions of records. They want this issue remediated when migrating the data to Service Cloud and Experience Cloud.

Which two activities and tools should a Solution Architect recommend to address these concerns when planning the data migration activity and assure it is completed in a timely manner?

Choose 2 answers

- A. Iteratively test smaller loads against a developer sandbox and the full load against a partial copy sandbox.
- **B. Use an ETL tool with a staging database in order to run data cleansing tools to obtain a clean data set.**
- **C. Iteratively test smaller loads against a developer or partial copy sandbox and the full load against a full copy sandbox.**
- D. Duplicate Management in Salesforce can be used to identify and manage duplicate records.

正解: B、C

解説:

B: An ETL (Extract, Transform, Load) tool is a software that can help extract data from multiple sources, transform it according to business rules, and load it into a target destination, such as Salesforce. An ETL tool can also help run data cleansing tools, such as deduplication, validation, standardization, and enrichment, to obtain a clean data set before migrating it to Salesforce. C: Iteratively testing smaller loads against a developer or partial copy sandbox and the full load against a full copy sandbox can help ensure the data migration is successful and error-free. A developer or partial copy sandbox can be used for testing the data quality, mapping, and transformation rules, while a full copy sandbox can be used for testing the performance, scalability, and integrity of the data migration. References: <https://trailhead.salesforce.com/en/content/learn/modules/data-management-basics/data-management-basics-migrate> https://help.salesforce.com/s/articleView?id=sf.data_sandbox_create.htm&type=5

質問 # 24

A holding company owns and operates a large number of brands internationally. They are interested in migrating to a Salesforce multi-cloud solution to optimize IT spending across the brands. The brands would like to operate B2C Commerce sites supported by Service Cloud for their agents, and use Marketing Cloud to drive consumer engagement.

Given that the company has operations and customers in multiple countries around the world, which two recommendations should a Solution Architect make to ensure that customer experiences are compliant with all domestic and international regulations related to data privacy and security? Choose 2 answers

- **A. When implementing an B2C Commerce storefront, consider providing shoppers a mechanism to download their data.**
- B. Use a Service Cloud instance in every market in which they operate to ensure that data residency requirements are fulfilled.
- **C. Consider implementing Customer Data Platform (CDP) to ensure compliance with data protection laws.**
- D. Consider implementing enhanced transaction security to apply appropriate actions to monitor and control Service Cloud user activity.

正解: A、C

解説:

These answers are correct because they are recommendations that can help ensure that customer experiences are compliant with all domestic and international regulations related to data privacy and security. Providing shoppers a mechanism to download their data can help comply with the right to access and portability under GDPR and other laws. Implementing Customer Data Platform (CDP) can help comply with data protection laws by providing tools to manage consent, preferences, and identity resolution across multiple channels and touchpoints. References: https://help.salesforce.com/s/articleView?id=sf.b2c_commerce_gdpr.htm&type=5
<https://www.salesforce.com/products/customer-data-platform/overview/>

質問 # 25

A global merchant plans to use B2C Commerce, Service Cloud, and Marketing Cloud to support the shopper experience. They also plan on using Marketing Cloud Connect to integrate Service and Marketing Clouds and the Service Cloud Connector for B2C Commerce. The customers will receive SMS messages through Mobile Connect. One of the key requirements is to enable consent and profile management across the clouds.

Which two recommendations should a Solution Architect make as part of the solution?

Choose 2 answers

- A. Profile changes in B2C Commerce will sync to Service Cloud when person accounts are used
- B. Shopper consent in B2C storefronts will sync to Service Cloud when person accounts are used
- C. Service Cloud profile data can be configured to sync to the Marketing Cloud profile center
- D. SMS opt-in will sync with Service Cloud when contact ID is the subscriber key in Marketing Cloud

正解: A、D

解説:

A: SMS opt-in will sync with Service Cloud when contact ID is the subscriber key in Marketing Cloud. This can help enable consent and profile management across the clouds by allowing customers to opt-in or opt-out of SMS messages and reflecting their preferences in both Service Cloud and Marketing Cloud. This can also help comply with industry regulations and best practices for SMS marketing. C. Profile changes in B2C Commerce will sync to Service Cloud when person accounts are used. This can help enable consent and profile management across the clouds by allowing customers to update their profile information in B2C Commerce and syncing their changes to Service Cloud. This can also help maintain consistent and accurate customer data across different systems and platforms. References:

質問 # 26

A company has a multi-cloud implementation that involves an Experience Cloud portal, Service Cloud for case management, and Marketing Cloud for customer interaction.

The company wants all changes in Salesforce data-including creation, updates, deletion, and undeletion of a record-to be synchronized to its custom-built retail loyalty application in near-real time without significantly impacting the overall system performance.

Which option is the most appropriate integration mechanism for this scenario?

- A. Apex Trigger Callout
- B. Triggered Send Definition
- C. Outbound Messages
- D. Change Data Capture

正解: D

解説:

Change Data Capture is an event-driven integration mechanism that allows near-real-time synchronization of Salesforce data changes with external systems. It does not impact the system performance as it uses asynchronous processing and does not require triggers or code. References: https://developer.salesforce.com/docs/atlas.en-us.change_data_capture.meta/change_data_capture/cdc_intro.htm

質問 # 27

Key business stakeholders have asked for a new business requirement that requires a multi-cloud solution design using self-service commerce, a service agent console, and marketing communication. A Solution Architect was brought in to lead the end-to-end solution design and delivery.

Which two actions should the Solution Architect take to accurately capture these requirements? Choose 2 answers

- A. Design the solution and hand it off to the delivery team to start to build and test it.
- B. Include functional and technical experts across discovery workshops to ensure requirements and priorities are captured.
- C. Set up DevOps processes and environments in preparation for the discovery workshops.

- **D. Draft a requirements and process document. Invite key business and technical/design team stakeholders to review and approve.**

正解: B、D

解説:

These answers are correct because they are actions that a Solution Architect should take to accurately capture the requirements for a multi-cloud solution design. Including functional and technical experts across discovery workshops can help ensure that the requirements and priorities are captured from different perspectives and domains. Drafting a requirements and process document can help document the business needs, expectations, and constraints for the solution design. Inviting key business and technical/design team stakeholders to review and approve the document can help validate the requirements and ensure alignment.
