SAP C_ABAPD_2507 Test Guide Online, C_ABAPD_2507 Valid Vce

According to the needs of all people, the experts and professors in our company designed three different versions of the C_ABAPD_2507 certification training materials for all customers. The three versions are very flexible for all customers to operate. You can choose the version for yourself which is most suitable, and all the C_ABAPD_2507 Training Materials of our company can be found in the three versions. It is very flexible for you to use the three versions of the C_ABAPD_2507 latest questions to preparing for your C_ABAPD_2507 exam.

SAP C_ABAPD_2507 Exam Syllabus Topics:

Topic	Details
-------	---------

Topic 1	<ul style="list-style-type: none"> ABAP RESTful Application Programming Model: This section of the exam measures skills of SAP Application Programmers and covers the fundamentals of the ABAP RESTful Application Programming Model (RAP). It includes topics such as behavior definitions, service binding, and the use of managed and unmanaged scenarios. The focus is on building modern, scalable, and cloud-ready applications using RAP.
Topic 2	<ul style="list-style-type: none"> SAP Clean Core Extensibility and ABAP Cloud: This section of the exam measures skills of SAP Application Programmers and covers the clean core principles and extensibility options within SAP BTP. It also includes cloud-native ABAP development practices, emphasizing the creation of upgrade-stable and maintainable extensions aligned with SAP's cloud strategy.
Topic 3	<ul style="list-style-type: none"> ABAP Core Data Services and Data Modeling: This section of the exam measures skills of SAP ABAP Developers and covers the creation, definition, and use of Core Data Services (CDS) views for data modeling within SAP environments. Candidates are expected to understand annotations, data definitions, and the role of CDS in enabling advanced data processing and integration across SAP systems.
Topic 4	<ul style="list-style-type: none"> Core ABAP Programming: This section of the exam measures skills of SAP Application Programmers and covers foundational ABAP programming knowledge. Topics include modularization techniques, internal tables, control structures, and classical report programming. Mastery of these concepts is essential for building efficient ABAP applications.

SAP Certified Associate - Back-End Developer - ABAP Cloud Sample Questions (Q16-Q21):

NEW QUESTION # 16

Which statement creates a reference variable for class CL_VEHICLE?

- A. DATA lo_vehicle TYPE REF TO cl_vehicle.
- B. TYPES lo_vehicle TYPE cl_vehicle.
- C. DATA lo_vehicle TYPE REF OF cl_vehicle.
- D. DATA lo_vehicle LIKE REF cl_vehicle.

Answer: A

Explanation:

Comprehensive and Detailed Explanation from Exact Extract:

* In ABAP, object references must be declared with TYPE REF TO <class>.

* Option D is correct: DATA lo_vehicle TYPE REF TO cl_vehicle. creates a reference variable.

* Option A # Incorrect, TYPES defines a type, not a variable.

* Option B # Syntax error, correct keyword is REF TO, not REF OF.

* Option C # Invalid, LIKE REF is not supported in ABAP.

Study Guide Reference: ABAP Objects Programming Guide - Reference Variable Declarations.

NEW QUESTION # 17

Using ABAP SQL, which select statement selects the mat field on line #17?

- A. SELECT mat FROM demo_sales_so_i..
- B. SELECT mat FROM demo_sales_cds_so_i ve...
- C. SELECT mat FROM demo_sales_cds material ve...
- D. SELECT mat FROM Material...

Answer: B

Explanation:

Using ABAP SQL, the select statement that selects the mat field on line #17 is:

SELECT mat FROM demo_sales_cds_so_i ve...

This statement selects the mat field from the CDS view demo_sales_cds_so_i ve, which is defined on line #1. The CDS view demo_sales_cds_so_i ve is a projection view that projects the fields of the CDS view demo_sales_cds_so_i, which is defined on

line #2. The CDS view demo_sales_cds_so_i is a join view that joins the fields of the database table demo_sales_so_i, which is defined on line #3, and the CDS view demo_sales_cds_material_ve, which is defined on line #4. The CDS view demo_sales_cds_material_ve is a value help view that provides value help for the material field of the database table demo_sales_so_i. The mat field is an alias for the material field of the database table demo_sales_so_i, which is defined on line #91. The other options are not valid because:

- A . SELECT mat FROM Material.. is not valid because Material is not a valid data source in the given code. There is no CDS view or database table named Material.
- C . SELECT mat FROM demo_sales_so_i... is not valid because demo_sales_so_i is not a valid data source in the given code. There is no CDS view named demo_sales_so_i, only a database table. To access a database table, the keyword TABLE must be used, such as SELECT mat FROM TABLE demo_sales_so_i...
- D . SELECT mat FROM demo sales cds material ve... is not valid because demo sales cds material ve is not a valid data source in the given code. There is no CDS view or database table named demo sales cds material ve. The correct name of the CDS view is demo_sales_cds_material_ve, with underscores instead of spaces.

NEW QUESTION # 18

Given the following ABAP code, which exception will be raised on execution?

- A. **cx_sy_conversion_no_number**
- B. cx_sy_itab_line_not_found
- C. cx_sy_zerodivide

Answer: A

NEW QUESTION # 19

Given the following Core Data Service view entity data definition:

```
@AccessControl.authorizationCheck: #NOT_REQUIRED
```

```
DEFINE VIEW ENTITY demo_cds_param_view_entity
```

```
WITH PARAMETERS
```

```
p_date : abap.dats
```

```
AS SELECT FROM sflight
```

```
{
key carrid,
key connid,
key fdate,
price,
seatsmax,
seatsocc
}
```

```
WHERE fdate >= $parameters.p_date;
```

Which of the following ABAP SQL snippets are syntactically correct ways to provide a value for the parameter on line #4?

Note: There are 2 correct answers to this question.

- A. **SELECT * FROM demo_cds_param_view_entity(p_date = @(cl_abap_context_info=>get_system_date())) ...**
- B. **SELECT * FROM demo_cds_param_view_entity(p_date = '20230101') ...**
- C. SELECT * FROM demo_cds_param_view_entity(p_date = '20230101') ...
- D. SELECT * FROM demo_cds_param_view_entity(p_date = :\$session.system_date) ...

Answer: A,B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Parameters in CDS view entities (WITH PARAMETERS) must always be supplied when querying. In ABAP SQL, the syntax rules are:

* A. CorrectSupplying a literal date ('20230101') directly is valid because the parameter p_date is of type abap.dats.

* B. CorrectSupplying a value via an ABAP expression using @(...) is syntactically correct. Here,

cl_abap_context_info=>get_system_date() returns the current system date in ABAP Cloud-compliant way, and is wrapped with @() for expression embedding. This is the best practice in ABAP Cloud development.

* C. Incorrect:Backticks (`...`) are used in ABAP for string templates, not for literals in this context. A date literal must be in quotes '...!.

* D. Incorrect:\$session.system_date is not valid in ABAP SQL. Session variables like \$session.* are supported in HANA SQL, but in ABAP CDS view consumption via ABAP SQL, this is not allowed.

Therefore, only A and B are correct.

Reference:ABAP CDS Development User Guide - section on CDS View Entity Parameters and ABAP SQL parameter passing rules; ABAP Cloud development guidelines on cl_abap_context_info=>get_system_date.

NEW QUESTION # 20

Why would you use Access Controls with CDS Views? Note: There are 2 correct answers to this question.

- **A. You do not have to remember to implement AUTHORITY CHECK statements.**
- **B. Only the data corresponding to the user's authorization is transferred from the database to the application layer.**
- C. All of the data from the data sources is loaded into your application automatically and filtered there according to the user's authorization.
- D. The system field sy-subrc is set, giving you the result of the authorization check

Answer: A,B

Explanation:

You would use Access Controls with CDS Views for the following reasons:

A . Only the data corresponding to the user's authorization is transferred from the database to the application layer. This is true because Access Controls allow you to define CDS roles that specify the authorization conditions for accessing a CDS view. The CDS roles are evaluated for every user at runtime and the system automatically adds the restrictions to the selection conditions of the CDS view. This ensures that only the data that the user is authorized to see is read from the database and transferred to the application layer. This improves the security and the performance of the data access1.

C . You do not have to remember to implement AUTHORITY CHECK statements. This is true because Access Controls provide a declarative and centralized way of defining the authorization logic for a CDS view. You do not have to write any procedural code or use the AUTHORITY CHECK statement to check the user's authorization for each data source or field. The system handles the authorization check automatically and transparently for you2.

The following reasons are not valid for using Access Controls with CDS Views:

B . The system field sy-subrc is set, giving you the result of the authorization check. This is false because the system field sy-subrc is not used by Access Controls. The sy-subrc field is used by the AUTHORITY CHECK statement to indicate the result of the authorization check, but Access Controls do not use this statement. Instead, Access Controls use CDS roles to filter the data according to the user's authorization2.

D . All of the data from the data sources is loaded into your application automatically and filtered there according to the user's authorization. This is false because Access Controls do not load all the data from the data sources into the application layer. Access Controls filter the data at the database layer, where the data resides, and only transfer the data that the user is authorized to see to the application layer. This reduces the data transfer and the memory consumption of the application layer1.

NEW QUESTION # 21

.....

For candidates who are going to attend the exam, some practice is necessary, for the practice can build up the confidence.

C_ABAPD_2507 exam torrent of us can help you pass the exam successfully. C_ABAPD_2507 exam braindumps are edited by professional experts, and the quality can be guaranteed. In addition, C_ABAPD_2507 exam materials cover most knowledge points for the exam, and you can master the major knowledge points for the exam, therefore your confidence for the exam will be strengthened. We provide you with free demo for you to have a try before buying C_ABAPD_2507 Exam Braindumps, so that you can know what the complete version is like.
