P.S. Free 2026 Esri EAEP2201 dumps are available on Google Drive shared by Dumpkiller: https://drive.google.com/open?id=1vNeSu9SrxG3uMtQBno_EGxt2VHJAt-w7

Do you feel anxiety about your coming EAEP2201 exam test? Do you want to find the valid and latest material for the EAEP2201 actual test? Dumpkiller will help you and bring you to the right direction. Firstly, EAEP2201 free demo is allowable for you to try before you buy. Besides, we will offer you the benefits of 365 days free update. SO, even if the EAEP2201 Actual Test is changed frequently, you do not worry about it, because our EAEP2201 training material is updated according to the actual test and can ensure you pass.

The Enterprise Administration Professional 2201 certification exam covers a range of topics including system architecture, security, database management, web services, and performance tuning. It is designed to test the knowledge and skills of professionals who work with Esri's enterprise GIS software on a daily basis. EAEP2201 Exam consists of 80 multiple-choice questions and has a time limit of two hours.

Esri EAEP2201 (Enterprise Administration Professional 2201) Exam is a certification program designed for professionals associated with the software company Esri. Enterprise Administration Professional 2201 certification is focused on assessing an individual's knowledge and capabilities with regards to administering ArcGIS Enterprise, a mapping and geospatial analysis platform developed by Esri. Enterprise Administration Professional 2201 certification aims to validate the skills of professionals who work with ArcGIS Enterprise on a day-to-day basis.

Latest EAEP2201 Braindumps Pdf - EAEP2201 Practice Engine

It is a truth universally acknowledged that the exam is not easy but the related EAEP2201 certification is of great significance for workers in this field so that many workers have to meet the challenge, I am glad to tell you that our company aims to help you to pass the EAEP2201 examination as well as gaining the related certification in a more efficient and simpler way. During nearly ten years, our EAEP2201 Exam Questions have met with warm reception and quick sale in the international market. Our EAEP2201 study materials are distinctly superior in the whole field.

Esri EAEP2201 (Enterprise Administration Professional 2201) exam is a certification program designed for professionals who want to demonstrate their expertise in managing and administering enterprise GIS systems. EAEP2201 exam is developed and administered by Esri, a leading provider of GIS software and solutions. The EAEP2201 Exam is one of the most popular certification programs offered by Esri, and it is recognized globally as a credential for GIS professionals.

Esri Enterprise Administration Professional 2201 Sample Questions (Q60-Q65):

NEW QUESTION # 60

An organization configures an ArcGIS Enterprise portal to allow single sign-on using Integrated Windows Authentication (IWA). Configuration includes:

* All accounts in the Active Directory group gisusers are added to the portal
* Existing users can sign in without entering credentials. However, new employees assigned to the same gisusers group cannot log in, create content, or join groups. What is causing this issue for the new employees?

- A. Their Active Directory accounts have not had sufficient time to sync to the portal
- B. The Web Adaptor cache must be cleared
- C. Their Active Directory accounts have been assigned an incompatible default user type
- **D. Their Active Directory accounts have not been added to the portal**

Answer: D

Explanation:

For IWA authentication, Active Directory users are not automatically added to the ArcGIS Enterprise portal. They must either be:

- * Manually added as members, or
- * Automatically created at first login if auto-creation is enabled.

Since the new users are assigned to the gisusers group but cannot sign in or create content, it's clear that their accounts have not yet been added to the portal.

From ArcGIS Enterprise documentation:

"Integrated Windows Authentication (IWA) allows users to sign in with their Windows credentials. However, users must still be members of the portal. You can manually add users or enable automatic account creation during login."

- * Option B is invalid since default user type settings do not prevent login.
- * Option C is incorrect because synchronization is not time-based-it's account-creation dependent.

NEW QUESTION # 61

Portal for ArcGIS is running in a Windows environment.

Which type of account is recommended to run the Portal for ArcGIS service?

- **A. Group-managed service account**
- B. Local machine administrator account
- C. Built-in system account
- D. Windows Active Directory domain account

Answer: A

Explanation:

Esri recommends using a Group Managed Service Account (gMSA) to run Portal for ArcGIS services in Windows environments. gMSAs automatically manage passwords, align with Active Directory policies, and are ideal for enterprise-scale deployments.

From Esri documentation:

"Using a group managed service account (gMSA) to run Portal for ArcGIS services improves security by allowing Windows to manage the password, reducing administrative overhead while meeting enterprise security requirements."

- * Option B (regular AD account) is acceptable but requires manual password updates.
- * Option C and D are not secure or scalable for enterprise environments.

Reference: ArcGIS Enterprise - Service Account Recommendations for Windows Environments

NEW QUESTION # 62

A GIS administrator is publishing a feature service. All 2,400 features in the dataset must be able to be returned from a single request to the service.

Which action should the administrator perform?

- A. Use service defaults for publishing
- B. Enable cached drawing mode
- **C. Increase the max record count**
- D. Adjust pooling to handle the request

Answer: C

Explanation:

By default, feature services limit the number of records returned in a single request (usually set to 1,000).

To allow all 2,400 features to be returned in one call, the administrator needs to increase the "Maximum number of records returned by the server"(maxRecordCount) setting during or after publishing.

From the ArcGIS Server documentation:

"The maxRecordCount property defines the number of records returned by the server in a single request. To return all features, this value must be increased accordingly."

* Option A (adjust pooling) relates to concurrency and scalability, not data retrieval limits.

* Option C would keep the default setting of 1,000, which would not meet the requirement.

* Option D relates to visual performance, not record retrieval.

Reference: ArcGIS Server - Feature Service Settings and Tuning for Performance

NEW QUESTION # 63

An organization must limit the users who can publish services that reference data in a user-managed database.

At the same time, all users must be able to access and edit the data in that user-managed data store.

How should the database be registered?

- A. As a data store item in the ArcGIS Enterprise portal
- **B. As an ArcGIS-managed data store in Server Manager**
- C. As a relational data store in ArcGIS Data Store

Answer: B

Explanation:

Registering the database as a data store item in the ArcGIS Enterprise portal allows administrators to control who can publish services referencing the data. By sharing the data store item with specific groups or individuals, administrators can restrict publishing capabilities to authorized users. At the same time, all users can be granted appropriate permissions to access and edit the data directly in the user-managed database, independent of the publishing privileges.

Registering the database as an ArcGIS-managed data store in Server Manager does not provide the same level of control over publishing permissions. Registering it as a relational data store in ArcGIS Data Store is intended for managed data storage and does not apply to user-managed databases.

Reference Source: ArcGIS Enterprise documentation on registering user-managed data stores and controlling access.

NEW QUESTION # 64

An organization is implementing a disaster recovery strategy for an ArcGIS Enterprise deployment for custom cached basemaps.

Which action should the organization perform?

- A. Run the webgisdr disaster recovery utility tool
- **B. Make backup copies of all cache folder directories**
- C. Use the ArcGIS Data Store backup utility

Answer: B

Explanation:

Custom cached basemaps are stored as tile cache files on disk and are not included in backups created by the webgisdr tool or the ArcGIS Data Store backup utility. Therefore, to ensure these basemaps can be restored in the event of a disaster, it's essential to manually back up the cache directories where these tiles are stored.

This involves copying the cache folders to a secure backup location and ensuring they are kept in sync with any updates made to the basemaps.

The webgisdr tool (Option A) is used for backing up and restoring the ArcGIS Enterprise configuration and content but does not include custom tile caches. The ArcGIS Data Store backup utility (Option C) is used for backing up hosted feature layers and other data managed by the ArcGIS Data Store, not custom cached basemaps.
