## Appian Senior Developer Sample Questions (Q58-Q63):

### NEW QUESTION # 58

A process was recently pushed to the Prod environment. However, users are reporting that a task on this process is experiencing slow response times when they try to input data.

What is the most likely reason for this issue?

- **A. There are too many SAIL components on the task.**
- B. The task is assigned to too many users.
- C. Exception timers on tasks are set to values that are too low.
- D. The process uses too many hidden variables.

**Answer: A**

Explanation:

Having too many SAIL components on the task can cause slow response times for users, as the interface may take longer to render and process inputs, impacting performance.

### NEW QUESTION # 59

You're inspecting the items in a deployment package for issues you might have missed during package preparation.

Which two objects can be in your list of missing precedents for an application? (Choose two.)

- **A. Group Type Custom**
- B. Document
- **C. Connected System**
- D. System Knowledge Center

**Answer: A,C**

Explanation:

Connected System and Group Type Custom can both be missing precedents in an Appian deployment package, meaning dependent objects required by the application may not have been included.

### NEW QUESTION # 60

You need to create an expression rule that will be reused throughout your environment.

What are two reasons why you should include meaningful test cases when creating a new expression rule? (Choose two.)

- A. To facilitate Test-Driven Development.
- B. To enhance the appearance of the code.
- C. To improve the performance of the environment.
- D. To accelerate various types of testing, including: unit, regression, exploratory.

**Answer: A,D**

Explanation:

Meaningful test cases accelerate different testing types by providing clear validation scenarios for the rule.

They support Test-Driven Development by enabling you to define expected outcomes before or during rule creation.

#### NEW QUESTION # 61

You need to configure a process model that runs every day at 10:00 AM. The process should start only at the specified time even when a newer version of the process model is published.

A Boolean type constant needs to be configured in the process model. The intended flow of the process should be executed only when the constant is True.

Which three steps should you perform? (Choose three.)

- A. Add a timer event just after the start node to check for the specific time.
- B. Add a XOR Gateway just after the start node to check for the constant to be True.
- C. Add an expression-based condition in the start node timer event to check for the specific time.
- D. Add a timer event in the start node.
- E. Add an expression-based condition in the start node timer event to check for the constant to be True.

**Answer: B,C,D**

Explanation:

Add a timer event in the start node to schedule the process to start at 10:00 AM every day.

Add a XOR Gateway after the start node to check the Boolean constant and control the flow based on its value.

Add an expression-based condition in the start node timer event to ensure the process starts only at the specified time.

#### NEW QUESTION # 62

You're designing a file upload process that integrates with an external document management system.

Part of this process is to develop a start form with a file upload component, so that the user can upload multiple files.

The business has requested that the maximum file size that can be uploaded through this process is 1GB. Additionally, you're aware that the integration's API can accept files with a maximum file size of 3GB, but recommends no larger than 1GB.

Can the process be more performant without straining the application or integration?

- A. Yes. Request the business reconsiders its requirements and find manual workarounds as it is not recommended to upload files of this size in both Appian and the integration.
- B. Yes. Request the business allows for these files to be uploaded as an overnight process by storing large files in a staging table, so that adequate resources are available.
- C. No. The file upload component is capable of accepting 1 GB files and the integration can handle this.

**Answer: B**

Explanation:

While Appian and the integration technically support 1 GB file uploads, handling such large files during interactive sessions can negatively impact application performance, user experience, and resource utilization.

A better approach is to request that the business allow these files to be uploaded asynchronously (e.g., overnight batch process), by temporarily storing them (e.g., in a staging table or folder) and processing them when system load is lower. This makes the process more performant and reliable without straining Appian or the external system.
