

# Reliable CWAP-405 Exam Price, CWAP-405 Dumps Free

BONUS!!! Download part of TestValid CWAP-405 dumps for free: [https://drive.google.com/open?id=1Cwf\\_8qNc9AKptuZddPIUGVBhq032UgCW](https://drive.google.com/open?id=1Cwf_8qNc9AKptuZddPIUGVBhq032UgCW)

This relieves any sort of anxiety in the candidate mind before the purchase of CWNP CWAP-405 exam preparation material. This CWAP-405 exam study material is offered to you at a very low price. We also offer up to 365 days of free updates on CWNP CWAP-405 Dumps after the date of purchase.

Our CWAP-405 learning guide beckons exam candidates around the world with our attractive characters. Our experts made significant contribution to their excellence. So we can say bluntly that our CWAP-405 simulating exam is the best. Our effort in building the content of our CWAP-405 Study Materials lead to the development of learning guide and strengthen their perfection. You may find that there are always the latest information in our CWAP-405 practice engine and the content is very accurate.

## CWAP-405 Dumps Free & CWAP-405 Exam Discount

They work together and analyze the examination content to compile most probable CWAP-405 real dumps in three formats. These CWNP Certification Exams questions will surely appear in the next CWNP CWAP-405 exam. Memorizing these CWNP CWAP-405 Valid Dumps will help you easily attempt the CWAP-405 exam within the allocated time. Thousands of aspirants have passed their CWAP-405 exam, and they all got help from our CWNP CWAP-405 updated exam dumps.

## CWNP Certified Wireless Analysis Professional Sample Questions (Q44-Q49):

### NEW QUESTION # 44

What is an AIFS?

- A. A form of aggregation performed at the PHY layer based on 802.11e UP values interpreted from DSCP values
- B. A medium access method introduced by 802.11n, but never implemented
- C. A variable Interframe Space introduced by 802.11e to help prioritize medium access for different Access Categories
- D. The shortest period of time a STA can sleep

**Answer: C**

Explanation:

An AIFS is a variable interframe space introduced by 802.11e to help prioritize medium access for different Access Categories (ACs). An interframe space is a period of time that a STA (station) has to wait before attempting to access the medium. An AIFS is a type of interframe space that varies depending on the AC of the traffic. An AC is a logical queue that corresponds to a QoS (Quality of Service) level for different types of traffic. There are four ACs defined by 802.11e: AC\_VO (Voice), AC\_VI (Video), AC\_BE (Best Effort), and AC\_BK (Background). Each AC has a different AIFSN (Arbitration Interframe Space Number) value, which determines how long it has to wait before attempting to access the medium. A lower AIFSN value means a higher priority and a shorter waiting time. The other options are not correct, as they do not describe what an AIFS is. An AIFS is not a medium access method introduced by 802.11n, but never implemented, as it is part of the 802.11e standard and widely used in QoS-enabled WLANs. An AIFS is not a form of aggregation performed at the PHY layer based on 802.11e UP values interpreted from DSCP values, as aggregation is a technique that combines multiple frames into one larger frame to improve efficiency and throughput, not prioritization or medium access. An AIFS is not the shortest period of time a STA can sleep, as sleeping is a power saving mode that allows a STA to conserve battery power by periodically turning off its radio, not accessing the medium. References: [Wireless Analysis Professional Study Guide CWAP-405], Chapter 7: QoS Analysis, page 194-195

#### NEW QUESTION # 45

What element was added to the general frame of 802.11 with the 802.11e amendment and the 802.11-2007 rollout?

- A. Address 4
- B. HT Control
- C. QoS Control
- D. RSN-IE

**Answer: C**

#### NEW QUESTION # 46

You are evaluating a protocol capture file in Wireshark. The following filter is applied:

```
wlan_radio.11ac.bandwidth - - 4
```

What kind of frames are displayed?

- A. Only 80 MHz frames
- B. Only frames supporting 4 spatial streams
- C. Only 40 MHz frames
- D. Only frames supporting 4 radio chains

**Answer: A**

#### NEW QUESTION # 47

What is the formula used to calculate the Duration field value in an RTS frame?

- A. RTS Duration field = Data or management frame to be sent duration + CTS duration + one ACK duration + three SIFS
- B. RTS Duration field = Data or management to be sent frame duration
- C. RTS Duration field = Data or management frame to be sent duration + CTS duration
- D. RTS Duration field = CTS duration

**Answer: A**

#### NEW QUESTION # 48

ABC International has installed a new smart ZigBee controlled lighting system. However, the network team is concerned that this new system will interfere with the existing WLAN and has asked you to investigate the impact of the two systems operating simultaneously in the 2.4 GHz band. When performing Spectrum Analysis, which question could you answer by looking at the FFT plot?

- A. Is the ZigBee system causing an increase in WLAN retries?
- **B. Do the ZigBee channels used by the lighting system overlap with the WLAN channels?**
- C. Is the WLAN corrupting ZigBee system messages?
- D. Is the ZigBee system using more than 50% of the available airtime?

**Answer: B**

Explanation:

The FFT plot is a spectrum analysis plot that shows the RF power present at a particular frequency over a short period of time. It can help identify the sources and characteristics of RF signals in the spectrum. By looking at the FFT plot, you can determine which ZigBee channels are used by the lighting system and whether they overlap with the WLAN channels in the 2.4 GHz band. ZigBee channels are 5 MHz wide and WLAN channels are 20 MHz or 40 MHz wide, so there is a possibility of overlap and interference between them. The other questions cannot be answered by looking at the FFT plot alone, as they require other types of plots or analysis tools, such as duty cycle plot, airtime utilization plot, or protocol analyzer.
