XSOAR-Engineer Test King & New XSOAR-Engineer Exam Questions

The Palo Alto Networks XSOAR-Engineer certification exam is an industrial-recognized Palo Alto Networks XSOAR Engineer (XSOAR-Engineer) certificate that is designed to validate candidates' skills, experience, and knowledge quickly. The Palo Alto Networks XSOAR Engineer (XSOAR-Engineer) certification exam has been inspiring Palo Alto Networks professionals since its beginning. Now this XSOAR-Engineer certification exam has become solid proof of certain skills set and knowledge.

Palo Alto Networks XSOAR Engineer Sample Questions (Q42-Q47):

NEW QUESTION # 42

When using the playbook debugger, what may be the cause of a starred incident missing from the Test Data selections?.

- A. The incident type is set incorrectly.
- B. The incident has been restricted.
- C. **Closed incidents are not visible in the debugger.**
- D. Starred incidents are not visible in the debugger.

Answer: C

Explanation:

The XSOAR Playbook Debugger allows engineers to simulate playbook behavior using existing incidents as sample data. The documentation explicitly states that only open incidents appear within the debugger's Test Data selection list. Closed incidents are removed from the selectable list because the debugger cannot execute against non-active incident states.

Starring an incident does not affect debugger availability; the star is a user-level convenience for bookmarking. RBAC restrictions (B) could hide an incident in general UI contexts but not selectively from the debugger. Incorrect incident type (D) also does not prevent selection as long as the incident is open.

Therefore, if a starred incident does not appear as a debugging option, the most common and documented reason is that the incident has been closed, and closed incidents cannot be used as debugger input. This aligns with option A.

NEW QUESTION # 43

A large number of incidents were deleted by mistake.

Which two architecture components can be used to recover the lost data? (Choose two.)

- A. **Local backup**
- B. Engine
- C. **Live backup**
- D. Distributed database

Answer: A,C

Explanation:

<https://docs.paloaltonetworks.com/cortex/cortex-xsoar/6-6/cortex-xsoar-admin/disaster-recovery-and-live-backup/backup-the-database.html> Reference: <https://docs.paloaltonetworks.com/cortex/cortex-xsoar/6-0/cortex-xsoar-admin/disaster-recovery-and-live-backup/disaster-recovery-and-backup-overview.html>

NEW QUESTION # 44

When re-assigning an existing incident to a new incident type, an engineer is concerned about the preservation of critical data currently stored in fields that are only associated to the original incident type.

Upon making the change, in which state will the critical data be in the now unassociated fields?.

- A. Hidden from the Context Data but accessible.
- **B. Visible within Context Data and fully accessible.**
- C. Hidden from Context Data and no longer accessible.
- D. Visible with Context Data, grayed out, and fully accessible.

Answer: B

Explanation:

XSOAR separates Context Data from Incident Layout fields. When an incident field is populated, its value is stored in Context, even if the incident type later changes. The Admin Guide clearly states that context is persistent and not dependent on whether a field belongs to the new incident type.

If an incident is reassigned to a different incident type, fields not included in the new type's layout are no longer visible in the UI, but the data is fully retained in Context. Analysts can still retrieve the values through playbooks, scripts, or JSON view. This ensures investigations are not disrupted and historical information is never lost due to schema changes.

The data is not deleted, nor is it hidden from context (ruling out options A and D). It also does not appear grayed out in the UI (C), because the fields no longer appear at all unless re-added to the layout.

Thus, per XSOAR's data retention model, the correct state is B: Visible within Context Data and fully accessible.

NEW QUESTION # 45

An incident field is created having the display name as Source_IP. How can the field be accessed?

- **A. \${incident.srcip}**
- B. \${incident.Source IP}
- C. \${incident.sourceip}
- D. \${incident.Source_IP}

Answer: A

NEW QUESTION # 46

In which two locations can filters and transformers be used in XSOAR? (Choose two.)

- A. Classification and Mapping
- **B. Incident Fields**
- **C. Playbook Tasks**
- D. Evidence Fields

Answer: B,C

Explanation:
