## Amazon AWS Certified Cloud Practitioner Sample Questions (Q300-Q305):

### NEW QUESTION # 300

A company has multiple AWS accounts within AWS Organizations and wants to apply the Amazon EC2 Reserved instances benefit to a single account only. Which action should be taken?

- A. Enable billing alerts in the AWS Billing and Cost Management console
- B. Enable Reserved Instance sharing in the AWS Billing and Cost Management console
- C. Purchase the Reserved instances in individually linked accounts and turn off Reserved Instance sharing from the payer level
- D. Purchase the Reserved Instances from master payer account and turn off Reserved Instance sharing.

Answer: C

### NEW QUESTION # 301

Which Amazon Virtual Private Cloud (Amazon VPC) feature enables users to connect two VPCs together?

- **A. Amazon VPC peering**
- B. Amazon Elastic Compute Cloud (Amazon EC2) ClassicLink
- C. Amazon VPC endpoints
- D. AWS Direct Connect

**Answer: A**

Explanation:

Explanation

A VPC peering connection is a networking connection between two VPCs that enables you to route traffic between them using private IPv4 addresses or IPv6 addresses. Instances in either VPC can communicate with each other as if they are within the same network. You can create a VPC peering connection between your own VPCs, or with a VPC in another AWS account. The VPCs can be in different regions (also known as an inter-region VPC peering connection).

### NEW QUESTION # 302

An Availability Zone consists of:

- **A. one or more data centers in a single location.**
- B. two or more physical hosts in multiple data centers.
- C. one or more physical hosts in a single data center.
- D. two or more data centers in multiple locations.

**Answer: A**

### NEW QUESTION # 303

How does AWS Trusted Advisor provide guidance to users of the AWS Cloud? (Select TWO )

- **A. It provides a list of cost optimization recommendations based on current AWS usage**
- B. It identifies software vulnerabilities in applications running on AWS
- C. It provides proactive alerting whenever an Amazon EC2 instance has been compromised
- D. It automatically corrects potential security issues caused by permissions settings on account resources
- **E. It detects potential security vulnerabilities caused by permissions settings on account resources**

**Answer: A,E**

### NEW QUESTION # 304

An ecommerce company wants to distribute traffic between the Amazon EC2 instances that host its website.

Which AWS service or resource will meet these requirements?

- **A. Application Load Balancer**
- B. AWS CloudHSM
- C. AWS Direct Connect
- D. AWS WAF

**Answer: A**

Explanation:

This is the AWS service or resource that will meet the requirements of distributing traffic between the Amazon EC2 instances that host the website. Application Load Balancer is a type of Elastic Load Balancing that distributes incoming application traffic across multiple targets, such as Amazon EC2 instances, containers, IP addresses, and Lambda functions. Application Load Balancer operates at the application layer (layer 7) of the OSI model and supports advanced features such as path-based routing, host-based routing, health checks, and SSL termination. You can learn more about Application Load Balancer from [this webpage] or [this digital course].
