**JN0-232最新題庫資源 & 新版JN0-232考古題**

言與行的距離到底有多遠？關鍵看人心，倘使心神明淨，意志堅強，則近在咫尺，垂手可及。我想你應該就是這樣的人吧。既然選擇了要通過Juniper的JN0-232認證考試，當然就得必須通過，PDFExamDumps Juniper的JN0-232考試培訓資料是幫助通過考試的最佳選擇，也是表現你意志堅強的一種方式，PDFExamDumps網站提供的培訓資料在互聯網上那是獨一無二的品質好，如果你想要通過Juniper的JN0-232考試認證，就購買PDFExamDumps Juniper的JN0-232考試培訓資料。

## 最新的 Associate JNCIA-SEC JN0-232 免費考試真題 (Q30-Q35):

### 問題 #30

Which two statements about management functional zones are correct? (Choose two.)

- A. The management functional zone is automatically created on the SRX Series Firewalls.
- B. The management functional zone contains all available revenue ports until they are assigned to a user-defined security zone.
- C. The management functional zone cannot be referenced in any security policies.
- D. The management functional zone is used to control the management-related traffic that is allowed to access your device.

答案: A,D

解題說明:

The management functional zone on SRX devices is a special predefined zone with unique characteristics:

\* It is automatically created (Option C) and cannot be deleted.

\* It is used specifically for management-related traffic (Option A), such as SSH, Telnet, web management (J-Web), SNMP, and other control-plane services.

\* It does not contain revenue (data) interfaces (Option B is incorrect). Interfaces must be explicitly configured into user-defined zones.

\* The management zone can be referenced in policies if inter-zone communication involving management traffic is needed (Option D is incorrect).

Correct Statements: A and C

Reference: Juniper Networks - Security Zones and Management Functional Zone, Junos OS Security Fundamentals.

### 問題 #31

Which two characteristics of destination NAT and static NAT are correct? (Choose two.)

- A. Static NAT automatically creates a matching rule for the opposite direction.
- B. Destination NAT requires address range sizes that match the devices being translated.
- C. Destination NAT supports port forwarding.
- D. Static NAT uses Port Address Translation.

答案: A,C

解題說明:

Destination NAT supports port forwarding, allowing specific destination ports on a public IP to be translated to different internal IP addresses and ports.

Static NAT automatically creates a matching reverse translation, making it bi-directional - traffic can flow in both directions using the same mapping without additional configuration.

### 問題 #32

Which two addresses are valid address book entries? (Choose two.)

- A. 191.168.203.0/24
- B. 173.145.5.21/255.255.255.0
- C. 203.150.108.10/24
- D. 153.146.0.145/255.255.0.255

答案: B,C

解題說明:

The correct address book entries are:

173.145.5.21/255.255.255.0

203.150.108.10/24

Both of these entries represent a valid IP address and subnet mask combination, which can be used as an address book entry in a Juniper device.

### 問題 #33

Referring to the exhibit, which two statements are correct? (Choose two.)

```
policy: https-access, action-type: permit, services-offload: not-configured, State: enabled,
index: 9, Scope Policy: 0
Policy Type: Configured
Sequence number: 1
From zone: Trust, To zone: Untrust
Source vrf group:
  any
Destination vrf group:
  any
Source addresses:
  any-ipv4(global): 0.0.0.0/0
  any-ipv6(global): ::/0
Destination addresses:
  any-ipv4(global): 0.0.0.0/0
  any-ipv6(global): ::/0
Application: junos-https
IP protocol: tcp, ALG: 0, Inactivity timeout: 1800
Source port range: [0-65535]
Destination ports: 443
Source identity feeds:
  any
Destination identity feeds:
  any
Per policy TCP Options: SYN check: No, SEQ check: No, Window scale: No
Session log: at-close
```

JUNIPER  
NETWORKS

- A. This security policy permits HTTPS traffic.
- B. This security policy is the second security policy in the list.
- C. This security policy uses a non-default inactivity timeout.
- D. This security policy is a zone-based security policy.

答案: A,D

解題說明:

The policy is defined from Trust zone to Untrust zone, which makes it a zone-based security policy.

The application junos-https with destination port 443 and action permit confirms that HTTPS traffic is explicitly allowed.

### 問題 #34

Which two statements describe what Port Address Translation does? (Choose two.)

- A. It enables multiple external clients to initiate a connection with multiple internal devices.
- B. It enables multiple internal devices to share a single external IP address.
- C. It maps an external IP address to an internal IP address.
- D. It maps an internal IP address to an external IP address and port number.

答案: B,D

解題說明:

Port Address Translation maps an internal IP address to a single external IP address using unique port numbers, allowing session differentiation.

Port Address Translation enables multiple internal devices to share a single external IP address by translating both IP addresses and source ports.
