1Z0-947 New Study Notes: Oracle GoldenGate 19c Implementation Professional - High Pass-Rate Oracle Examcollection 1Z0-947 Dumps Torrent

Many newcomers know that as an IT engineer they have to take part in exams for Oracle certifications, if pass exams and get a certification, you will get bonus. Oracle 1Z0-947 PDF file materials help a lot of candidates. If you are ready for exams, you can use our latest PDF file materials to read and write carefully. Our laTest 1Z0-947 Pdf file materials will ease your annoyance while preparing & reading, and then get better benefits and good opportunities.

Oracle GoldenGate 19c Implementation Professional Sample Questions (Q20-Q25):

NEW QUESTION # 20
Which statement about trails is correct?

- A. RMTTRAIL is for remote trails and EXTTRAIL is for local trails.
- B. Trail files are used to show how many records your Distribution Path is trailing behind the Extract.
- C. Trail files are used to show the order GoldenGate files are accessed to perform replication.
- D. Extract is typically used to produce local trail files over a TCP/IP connection.

Answer: A

Explanation:
In Oracle GoldenGate, EXTTRAIL is used to define local trail files written by a primary Extract, while RMTTRAIL defines remote trail files that are sent over the network (via TCP/IP) by a Data Pump or Distribution Server to a remote target.

NEW QUESTION # 21
What is the key purpose of GoldenGate trail files?

- A. They are a persistent storage area for captured transactions.
- B. They are checkpoint files for the GoldenGate processes.
- C. They are configuration files for the GoldenGate processes.
- D. They are database auditing logs in which GoldenGate registers changes.

Answer: A

Explanation:
"A trail is a series of files on disk where Oracle GoldenGate stores the captured changes to support the continuous extraction and replication of database changes." This makes trail files the persistent buffer between Extract and Replicat processes, decoupling them and improving fault tolerance and performance.

NEW QUESTION # 22
Users of both Extract and Replicat require the DBA role for the database.

- A. FALSE
- B. TRUE

Answer: A

Explanation:
Full DBA role is not mandatory for Extract or Replicat.

NEW QUESTION # 23
You need to manually patch Oracle GoldenGate source and targets. How should you proceed?

- A. Stop access to the source and target databases. Start applying the patch on the source. Stop the data pump and Replicat. Apply the patch on the target. Start the Oracle GoldenGate processes whenever you are ready to begin capturing user activity again.
- B. Stop access to the source and target databases. Allow Extract to finish capturing the transaction data that remains in the transaction log and stop Extract. Start applying the patch on the source. Wait until the data pump (if used) and Replicat are finished processing the data in their respective trails. Stop the data pump and Replicat. Apply the patch on the target. Start the Oracle GoldenGate processes whenever you are ready to begin capturing user activity again.
- C. Stop access to the source. Allow Extract to finish capturing the transaction data that remains in the transaction log and stop Extract. Start applying the patch on the source. Wait until the data pump/Replicat are finished processing the data in their respective trails. Stop the data pump/Replicat. Apply the patch on the target. If the patches changed table defs, run DEFGEN for the source tables to generate updated source defs, and then replace the old defs with the new ones in the existing source defs file on the target. Start GG processes when ready to begin capturing activity again.
- D. Stop access to the source database. Allow Extract to finish capturing the transaction data that remains in the transaction log and stop Extract. Start applying the patch on the source and on the target. Start the Oracle GoldenGate processes whenever you are ready to begin capturing user activity again.

Answer: C

Explanation:
This is the only option that:
* Waits for Extract to finish capturing remaining redo/transaction log data ☐
* Waits for Data Pump and Replicat to reach EOF ☐
* Properly stops components in sequence ☐
* Accounts for definition file updates (DEFGEN) if metadata changes ☐

NEW QUESTION # 24

Which parameter for GoldenGate 19c enables DDL replication for a Replicat?

- A. TARGETDDL
- B. USEDDL
- C. Enabled by default
- D. GETDDL

Answer: C

Explanation:
In Oracle GoldenGate 19c, Replicat is indeed configured to process DDL by default. So, if DDL statements are captured by Extract and passed in the trail files, Replicat will apply them without needing extra configuration.

NEW QUESTION # 25
