

IDP valid test questions & IDP free download dumps & IDP reliable study torrent

What's more, part of that TestValid IDP dumps now are free: https://drive.google.com/open?id=1G_7_JTpNnEb3EH-W16y3JMSXpHMPP-Ft

The TestValid is one of the top-rated and trusted platforms that are committed to making the entire CrowdStrike IDP exam preparation journey fast and successful. To achieve this goal the "TestValid" is offering valid, updated, and real CrowdStrike IDP Exam Questions. These TestValid IDP exam questions are checked and verified by qualified subject matter experts.

we believe that all students who have purchased IDP practice dumps will be able to successfully pass the professional qualification exam as long as they follow the content provided by our IDP study materials, study it on a daily basis, and conduct regular self-examination through mock exams. Our IDP Study Materials offer you a free trial service, and you can download our trial questions bank for free. I believe that after you try IDP training engine, you will love them.

New IDP Practice Materials & Test IDP Discount Voucher

To increase people's knowledge and understanding of this IDP exam, so as to improve and direct your practice, our experts made the IDP study questions diligently and assiduously all these years. Our IDP practice materials are successful measures and methods to adopt. They also make new supplementary IDP learning materials and add prediction of market trend happened in this exam.

CrowdStrike Certified Identity Specialist(CCIS) Exam Sample Questions (Q27-Q32):

NEW QUESTION # 27

Where in the Identity Protection module can one view the monitoring status of domain controllers?

- A. Domains
- B. Settings
- C. System Notifications
- D. Connectors

Answer: A

Explanation:

In Falcon Identity Protection, the Domains page is where administrators can view the monitoring and health status of domain controllers. The CCIS curriculum explains that this page provides visibility into which domain controllers are actively reporting authentication traffic, their inspection status, and whether Authentication Traffic Inspection (ATI) is enabled.

This view is essential for validating coverage and ensuring that Falcon Identity Protection has sufficient visibility into domain authentication activity. Administrators can quickly identify gaps, such as domain controllers that are not reporting or are misconfigured, and take corrective action.

The other options serve different purposes:

- * Settingsmanage general configuration.
- * System Notificationsdisplay alerts and messages.
- * Connectorsmanage integrations such as MFA and IDaaS.

Because domain controller visibility and monitoring health are managed at the domain level, Option C (Domains) is the correct and verified answer.

NEW QUESTION # 28

Which section of the Falcon menu is used to investigate the Event Analysis dashboard?

- A. Enforce
- **B. Explore**
- C. Threat Hunter
- D. Configure

Answer: B

Explanation:

In Falcon Identity Protection, the Explore section of the Falcon menu is used to investigate analytical views such as the Event Analysis dashboard. This aligns with the CCIS framework, which defines Explore as the primary area for interactive investigation, analytics, and risk exploration across identity data.

The Event Analysis dashboard is designed to help administrators analyze identity-related authentication events, behavioral patterns, and anomalous activity derived from domain traffic inspection and domain controller telemetry. These analytical capabilities are intentionally placed under Explore because this menu category supports hypothesis-driven investigation rather than enforcement or configuration actions.

By contrast:

- * Enforce is used to apply policy rules and automated controls.
- * Threat Hunter is focused on proactive hunting using queries and detection pivots.
- * Configure is used to manage settings, connectors, policies, and integrations.

The CCIS documentation explicitly associates dashboards such as Risk Analysis and Event Analysis with the Explore menu, emphasizing its role in understanding why risk exists before taking action. Therefore, Option C (Explore) is the correct and verified answer.

NEW QUESTION # 29

Which of the following best describes how Policy Group and Policy Rule precedence works?

- **A. Policy Groups are evaluated in the order in which the groups appear on the page. The Policy Rules within those groups are evaluated in the order in which they appear in the group**
- B. Policy Groups only group Policy Rules together. Precedence is dictated by the Rules
- C. Policy Groups are evaluated in the order in which the groups appear on the page; however, Policy Rules within those groups have no precedence
- D. There is no precedence with Policy Groups or Policy Rules; they enact policy if the conditions match

Answer: A

Explanation:

Falcon Identity Protection enforces deterministic policy execution using a clear and predictable precedence model. As outlined in the CCIS curriculum, Policy Groups are evaluated top to bottom, based on their order in the console. Within each Policy Group, Policy Rules are evaluated sequentially, also from top to bottom.

This ordered evaluation ensures consistent enforcement behavior and allows administrators to design layered identity controls. When a rule's conditions are met and an action is executed, subsequent rules may or may not be evaluated depending on rule logic and configuration. This model gives administrators precise control over enforcement priority.

The incorrect options misunderstand how precedence works. Policy enforcement is not unordered, nor are Policy Groups merely visual containers. Both grouping and rule order matter.

This precedence model is critical for avoiding conflicting enforcement actions and aligns with Zero Trust principles by ensuring predictable, auditable identity enforcement. Therefore, Option A is the correct answer.

NEW QUESTION # 30

Falcon Identity Protection can continuously assess identity events and associate them with potential threats WITHOUT which of the following?

- A. API-based connectors
- B. Machine-learning-powered detection rules
- C. Ingesting logs
- **D. The need for string-based queries**

Answer: D

Explanation:

Falcon Identity Protection is architected as a log-free identity security platform, a core tenet emphasized throughout the CCIS curriculum. Unlike traditional SIEM- or log-based solutions, Falcon Identity Protection does not require string-based queries to continuously assess identity events or associate them with threats.

Instead, the platform relies on machine-learning-powered detection rules, real-time authentication traffic inspection, and API-based connectors to collect and analyze identity telemetry directly from domain controllers and identity providers. This approach eliminates the operational complexity of building, tuning, and maintaining query logic.

String-based queries are commonly associated with legacy log aggregation tools and SIEM platforms, where analysts must manually search logs to identify suspicious behavior. Falcon Identity Protection replaces this model with behavioral baselining and automated correlation, enabling continuous identity risk assessment without human-driven query execution.

Because Falcon does not require string-based queries to operate, Option D is the correct and verified answer.

NEW QUESTION # 31

How does Identity Protection extend the capabilities of existing multi-factor authentication (MFA)?

- A. Identity Protection does not support on-premises MFA connectors
- B. Identity Protection will replace third-party MFA and trigger as it detects risky or abnormal behaviors
- C. Identity Protection is not going to detect risky user behavior
- **D. Implementation of a second-layer security control using policy rules as it detects risky or abnormal behaviors**

Answer: D

Explanation:

Falcon Identity Protection is designed to extend—not replace—existing MFA solutions. According to the CCIS curriculum, Identity Protection enhances MFA by adding a risk-driven, policy-based enforcement layer that dynamically triggers MFA challenges when risky or abnormal identity behavior is detected.

Rather than applying MFA uniformly, Falcon evaluates authentication context such as behavioral deviation, privilege usage, and anomaly detection. When risk thresholds are exceeded, Policy Rules can enforce MFA through integrated connectors, providing adaptive, Zero Trust-aligned authentication.

The incorrect options misunderstand Falcon's role. Identity Protection does detect risky behavior, does not replace MFA providers, and fully supports both cloud and on-premises MFA connectors.

Because Falcon adds intelligence-driven enforcement on top of MFA, Option A is the correct and verified answer.

NEW QUESTION # 32

.....

You can trust TestValid and download IDP exam questions to start preparation with complete peace of mind and satisfaction. The IDP exam questions have already helped countless CrowdStrike IDP exam candidates. They got success in their dream IDP Certification Exam with flying colors. They did this with the help of real, valid, and updated IDP exam questions. You can also get success in the CrowdStrike Certified Identity Specialist (CCIS) Exam certification exam with IDP exam questions.
