## Mock Plat-Dev-301 Exams & Formal Plat-Dev-301 Test

The Plat-Dev-301 exam dumps are the ideal study material for quick and complete Plat-Dev-301 exam preparation. The real and top-notch Salesforce Plat-Dev-301 exam questions are being offered in three different formats. These formats are Salesforce Plat-Dev-301 PDF Dumps Files, desktop practice test software, and web-based practice test software.

### Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q178-Q183):

#### NEW QUESTION # 178

The use of the transient keyword in Visualforce page controllers helps with which common performance issue?

- A. Improves page transfers
- B. Improves query performance
- C. Reduces view state
- D. Reduces load times

**Answer: C**

Explanation:

The transient keyword in Visualforce page controllers marks variables that should not be part of the view state, which can significantly reduce the size of the view state. This can help avoid view state limit errors and improve page performance because a smaller view state requires less time to send to the client.

#### NEW QUESTION # 179

A developer is tasked with ensuring that email addresses entered into the system for Contacts and for a custom object called survey Response c do not belong to a list of blocked domains.

The list of blocked domains is stored in a custom object for ease of maintenance by users. The survey Response c object is populated via a custom Visualforce page.

What is the optimal way to implement this?

- A. Implement the logic in validation rules on the Contact and the Survey Response\_c Objects.
- B. Implement the logic in a helper class that is called by an Apex trigger on Contact and from the custom Visualforce page controller.
- C. Implement the logic in the custom Visualforce page controller and call that method from an Apex trigger on Contact.
- D. Implement the logic in an Apex trigger on Contact and also implement the logic within the custom Visualforce page controller.

**Answer: B**

Explanation:

The optimal way to enforce the exclusion of blocked domains for email addresses entered into Contacts and a custom object is to use a helper class. The class can be called by an Apex trigger on the Contact object and from the controller of the custom Visualforce page used for the Survey Response. This centralizes the logic for maintainability and reusability.

#### NEW QUESTION # 180

A developer used custom settings to store some configuration data that changes occasionally. However, tests are now Failing in some of the sandboxes that were recently refreshed.

What should be done to eliminate this issue going forward?

- A. Set the setting type on the custom setting to List.
- B. Replace custom settings with static resources.
- C. Replace custom settings with custom metadata.
- D. Set the setting type on the custom setting to Hierarchy.

**Answer: C**

Explanation:

Replacing custom settings with custom metadata types is a good solution to ensure that test data is consistent across environments. Custom metadata types are deployable, and their records are available in test methods by default, unlike List Custom Settings which need to be manually recreated in each environment after a refresh.

#### NEW QUESTION # 181

For compliance purposes, a company is required to track long-term product usage in their org. The information that they need to log will be collected from more than one object and, over time, they predict they will have hundreds of millions of records.

What should a developer use to implement this?

- A. Setup audit trail
- B. Field history tracking
- C. Big objects
- D. Field audit trail

**Answer: C**

Explanation:

Big objects provide a solution for storing and managing large amounts of data within Salesforce. They are ideal for compliance purposes when tracking long-term usage data that will accumulate over time into very large record counts.

#### NEW QUESTION # 182

A developer is building a Lightning web component that retrieves data from Salesforce and assigns it to the record property.

What must be done in the component to get the data from Salesforce? A)

B) C)

- A. Option C
- B. Option A
- C. Option B

**Answer: B**

Explanation:

Option A is the correct answer. The `@wire` decorator is used in conjunction with `getRecord` from `lightning/uiRecordApi` to retrieve a record from Salesforce. The syntax `@wire(getRecord, { recordId: '$recordId', fields: '$fields' })` sets up a reactive property, which means it will automatically rerun whenever the `recordId` or `fields` property changes.

Get Record Data

#### NEW QUESTION # 183

.....

Our Plat-Dev-301 study braindumps can be very good to meet user demand in this respect, allow the user to read and write in a good environment continuously consolidate what they learned. Our Plat-Dev-301 prep guide has high quality. So there is all effective and central practice for you to prepare for your test. With our professional ability, we can accord to the necessary testing points to edit Plat-Dev-301 Exam Questions. So high quality Plat-Dev-301 materials can help you to pass your exam effectively, make you feel easy, to achieve your goal.

**Mock Plat-Dev-301 Exams:** <https://www.freecram.com/Salesforce-certification/Plat-Dev-301-exam-dumps.html>

The average pay for Plat-Dev-301 professionals is about \$107k annually, according to PayScale.com, So choosing our Plat-Dev-301 study guide: Salesforce Certified Platform Developer II - Multiple Choice is the best avenue to success, If you are one of the respectable customers who are using our Plat-Dev-301 exam cram, you can easily find that there are mainly three versions available on our test platform, which includes PDF version, PC version and APP online version, By the way, one of the biggest advantage is the Plat-Dev-301 exam practice vce can be applied in countless electronic equipment that support it.
