Get Unparalleled Vce AZ-120 Format and Pass Exam in First Attempt

The clients at home and abroad can both purchase our AZ-120 study tool online. Our brand enjoys world-wide fame and influences so many clients at home and abroad choose to buy our AZ-120 test guide. Our company provides convenient service to the clients all around the world so that the clients all around the world can use our AZ-120 Study Materials efficiently. Our company boosts an entire sale system which provides the links to the clients all around the world so that the clients can receive our AZ-120 exam questions timely.

Microsoft Planning and Administering Microsoft Azure for SAP Workloads Sample Questions (Q210-Q215):

NEW QUESTION # 210

You have SAP ERP on Azure.

For SAP high availability, you plan to deploy ASCS/ERS instances across Azure Availability Zones and to use failover clusters.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 211

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You deploy SAP HANA on Azure (Large Instances).

You need to back up the SAP HANA database to Azure.

Solution: You create a Recovery Services vault and a backup policy.

Does this meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

Backup architecture

* The backup process begins by creating a Recovery services vault in Azure. This vault will be used to store the backups and recovery points created over time.

* The Azure VM running SAP HANA server is registered with the vault, and the databases to be backed-up are discovered. To enable the Azure Backup service to discover databases, a preregistration script must be run on the HANA server as a root user.

* This script creates AZUREWLBACKUPHANAUSER DB user and a corresponding key with the same name in hdbuserstore. Refer to the setting up permissions section to understand more about what the script does.

* Azure Backup Service now installs the Azure Backup Plugin for HANA on the registered SAP HANA server.

* The AZUREWLBACKUPHANAUSER DB user created by the preregistration script is used by the Azure Backup Plugin for HANA to perform all backup and restore operations. If you attempt to configure backup for SAP HANA DBs without running this script, you might receive the following error: UserErrorHanaScriptNotRun.

* To configure backup on the databases that are discovered, choose the required backup policy and enable backups.

* Once the backup is configured, Azure Backup service sets up the Backint parameters at the DATABASE level on the protected SAP HANA server.

* The Azure Backup Plugin for HANA maintains all the backup schedules and policy details. It triggers the scheduled backups and communicates with the HANA Backup Engine through the Backint APIs.

* The HANA Backup Engine returns a Backint stream with the data to be backed up.

* All the scheduled backups and on-demand backups (triggered from the Azure portal) that are either full or differential are initiated by the Azure Backup Plugin for HANA. However, log backups are managed and triggered by HANA Backup Engine itself.

NEW QUESTION # 212

You have an SAP on Azure deployment that has been running for 180 days.

You need to validate that the virtual machines are sized to maximize the use of allocated resources. The solution must minimize administrative effort.

What should you use?

- A. SAP Quick Sizer

- B. VM insights
- C. Azure Monitor for SAP solutions
- D. Azure Advisor

Answer: C

NEW QUESTION # 213

You have the following Azure Resource Manager template.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: Yes

Count is 6.

Box 2: No

Mode is serial.

Box 3: NO

NEW QUESTION # 214

You are planning the Azure network infrastructure for an SAP environment.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: NO

Box 2: Yes

Box 3: Yes

Be aware that network traffic between two peered Azure virtual networks is subject to transfer costs. Huge data volume that consists of many terabytes is exchanged between the SAP application layer and the DBMS layer. You can accumulate substantial costs if the SAP application layer and DBMS layer are segregated between two peered Azure virtual networks.
