Computers are getting faster and faster, which provides us great conveniences and all possibilities in our life and work. IT jobs are attractive. Google Cloud-Digital-Leader exam guide materials help a lot of beginners or workers go through exam and get a useful certification, so that they can have a beginning for desiring positions. NewPassLeader Cloud-Digital-Leader Exam Guide Materials are famous for its high passing rate and leading thousands of candidates to a successful exam process every year.

To prepare for the Google Cloud Digital Leader Certification Exam, you will need to have experience in leading digital transformation initiatives, and you will need to have a strong understanding of Google Cloud technologies. You can prepare for the exam by taking online courses, attending workshops, and reading relevant books and articles. There are also many practice exams available online that can help you prepare for the exam.

Hot Cloud-Digital-Leader Top Exam Dumps | High Pass-Rate Google Valid Cloud-Digital-Leader Exam Questions: Google Cloud Digital Leader

No matter how the surrounding environment changes, you can easily deal with it with our Cloud-Digital-Leader exam questions. Do you want to be abandoned by others or have the right to pick someone else? Our Cloud-Digital-Leader simulating exam make you more outstanding and become the owner of your own life! Maybe you need to know more about our Cloud-Digital-Leader training prep to make a decision. Then you can free download the demos of our Cloud-Digital-Leader study guide, and you can have a experience on them before you pay for them.

Google Cloud Digital Leader Sample Questions (Q87-Q92):

NEW QUESTION # 87

Customers are reporting very high latencies when accessing an application from the United States. The application is currently running in a single region in Europe.

What should the organization do?

- A. Run the application in additional zones in the European region.
- B. Run the application in additional regions in Europe.
- C. Set up a new billing account in the United States.
- **D. Run a replica of the application in a region in the United States.**

Answer: D

Explanation:

The correct answer is D. Run a replica of the application in a region in the United States. Here's why:

Context of the Question: The application currently runs in a single region in Europe, and customers in the United States are experiencing high latencies. The organization needs to reduce latencies for these customers.

Google Cloud Product Relevance:

Running a replica of the application in a region in the United States would reduce latency by hosting the application closer to the end users. This improves response times and ensures a better user experience for customers in the United States.

Google Cloud provides services such as Cloud Load Balancing to distribute traffic efficiently between instances in different regions.

Why Not Other Options:

A. Set up a new billing account in the United States: Billing accounts do not affect application performance or latency.

B. Run the application in additional regions in Europe: This would not reduce latencies for users in the United States, as their traffic would still need to travel across the Atlantic.

C. Run the application in additional zones in the European region: Additional zones in Europe would not help with reducing latency for U.S. customers.

Google Cloud Digital Leader Reference:

Refer to Google Cloud's multi-region deployment documentation for more information on deploying applications across multiple regions.

NEW QUESTION # 88

How is privacy defined in the context of cloud technology?

- A. Susceptibility to data breaches and cyber attacks
- **B. Restrictions on data access and sharing**
- C. Procedures to authenticate user identity
- D. Compliance with regulatory standards

Answer: B

NEW QUESTION # 89

An organization is developing a new container-based application. They do not know how popular the application will be when launched and they do not want to pay for idle infrastructure resources. Which benefit of serverless computing will address this concern?

- A. Built-in security
- **B. Scalability**
- C. Reduced development costs
- D. Disaster recovery

Answer: B

Explanation:

Serverless computing offers automatic scaling, which means it dynamically adjusts the computational resources based on the demand for the application. This benefit is crucial when the popularity of the application is uncertain. The organization only pays for the actual compute resources used, rather than maintaining and paying for idle infrastructure.

Option C: Scalability is correct because serverless computing automatically scales up or down based on demand, ensuring that the organization does not incur costs for idle resources.

NEW QUESTION # 90

A real estate organization processes photos of properties uploaded by their agents to an internal application. They must manually check and remove photos that contain personally identifiable information like passports and credit cards. They want a solution that their developer can use to integrate with their app as quickly as possible. Which solution should they use?

- A. BigQuery ML
- B. Custom training
- C. Pre-trained APIs
- D. AutoML

Answer: C

Explanation:

Pre-trained APIs are ready-made models provided by Google Cloud that can be easily integrated into applications to perform specific tasks, such as detecting and removing personally identifiable information (PII) from images. These APIs, such as Cloud Vision API, can be quickly implemented by developers without needing to build or train custom models.

Option C: Pre-trained APIs is correct because it offers a quick and efficient solution for identifying and removing PII from images, which the organization's developers can easily integrate into their application.

NEW QUESTION # 91

Your organization uses Active Directory to authenticate users. Users' Google account access must be removed when their Active Directory account is terminated.

How should your organization meet this requirement?

- A. Configure BeyondCorp and Identity-Aware Proxy in the Google domain
- B. Configure single sign-on in the Google domain
- C. Configure two-factor authentication in the Google domain
- D. Remove the Google account from all IAM policies

Answer: B

Explanation:

Configure single sign-on in the Google domain

Single sign-on: Whenever a user needs to authenticate, Google Cloud delegates the authentication to Active Directory by using the Security Assertion Markup Language (SAML) protocol. This delegation ensures that only Active Directory manages user credentials and that any applicable policies or multi-factor authentication (MFA) mechanisms are being enforced. For a sign-on to succeed.

Federating Google Cloud with Active Directory

[Send feedback](#)

This article describes how you can configure Cloud Identity or Google Workspace to use [Active Directory as IdP and authoritative source](#).

The article compares the logical structure of Active Directory with the structure used by Cloud Identity and Google Workspace and describes how you can map Active Directory forests, domains, users, and groups. The article also provides a [flowchart](#) that helps you determine the best mapping approach for your scenario.

This article assumes that you're familiar with Active Directory.

Google Cloud uses Google identities for authentication and access management. Manually maintaining Google identities for each employee can add unnecessary management overhead when all employees already have an account in Active Directory. By federating user identities between Google Cloud and your existing identity management system, you can automate the maintenance of Google identities and tie their lifecycle to existing users in Active Directory.

NEW QUESTION # 92

.....

As we all know, office workers have very little time to prepare for examinations. It would be too painful to waste precious rest time on the subject. But if they have Cloud-Digital-Leader practice materials, things will become different. Our Cloud-Digital-Leader study materials not only include key core knowledge, but also allow you to use scattered time to learn, so that you can learn more easily and achieve a multiplier effect. And after you study with our Cloud-Digital-Leader Exam Questions for 20 to 30 hours, you will be able to pass the Cloud-Digital-Leader exam for sure.
