

Reliable C_DBADM_2601 Real Exam, C_DBADM_2601 Trusted Exam Resource

Nowadays, it is hard to find a desirable job. A lot of people are forced to live their jobs because of lack of skills. So you must learn something in order to be washed out by the technology. Then our C_DBADM_2601 study materials totally accord with your demands. With the latest information and knowledge in our C_DBADM_2601 Exam Braindumps, we help numerous of our customers get better job or career with their dreaming C_DBADM_2601 certification.

SAP C_DBADM_2601 Exam Syllabus Topics:

Section	Weight	Objectives
Backup and Recovery	11% - 20%	- High availability and disaster recovery - Recovery procedures and scenarios - Backup strategies and execution
Monitoring and Troubleshooting	11% - 20%	- Problem diagnosis and resolution - Monitoring tools and metrics - Performance analysis and optimization
Migration and Integration	11% - 20%	- Data movement and replication - Integration with SAP systems - Migration to SAP HANA Cloud
Database Security	11% - 20%	- Audit and compliance - Security settings and encryption - Data protection and access control
Database Administration and Configuration	11% - 20%	- System configuration and parameters - User and authorization management - Resource management and allocation
SAP HANA Architecture and Deployment	11% - 20%	- Deployment options: on-premise and cloud - Installation and upgrade procedures - Architecture components and concepts

C_DBADM_2601 Trusted Exam Resource, Authorized C_DBADM_2601 Test Dumps

If you decide to buy our C_DBADM_2601 study questions, you can get the chance that you will pass your exam and get the certification successfully in a short time. we can claim that if you study with our C_DBADM_2601 exam questions for 20 to 30 hours, then you will be easy to pass the exam. In a word, if you want to achieve your dream and become the excellent people in the near future, please buy our C_DBADM_2601 Actual Exam, it will help you get all you want!

SAP Certified - Database Administrator - SAP HANA Sample Questions (Q115-Q120):

NEW QUESTION # 115

CHALLENGE 2 - Replenishment Analytics Monitoring Baseline

The database team can either tune memory-related settings now to improve evening replenishment analytics or first preserve baseline monitoring evidence and tune only if current evidence supports it. Which option is most defensible?

- A. Replace monitoring review with merchandising user feedback because the reports are business-facing.
- **B. Preserve baseline monitoring evidence first, then approve tuning if current evidence supports it.**
- C. Reject all tuning until all store analytics reporting moves to SAP HANA Cloud.
- D. Tune now and use the improved replenishment runtime as the remediation success measure.

Answer: B

Explanation:

Feedback:

Preserving the monitoring baseline first is most defensible because tuning should follow current evidence. This balances reporting performance needs with reliable remediation evidence for later regional comparison.

NEW QUESTION # 116

CHALLENGE 4 - Shipping-Cycle Recovery Evidence Gate

The business sponsor asks whether the release decision can proceed because the systems are available and backups completed. The administration lead wants startup behavior after recovery documented first. Which response best fits the scenario?

- A. Proceed because availability and backup completion together are enough for release evidence.
- B. Proceed now and validate startup behavior during the later cloud migration phase.
- C. Remove recovery evidence from the release package because cutover testing is not daily production.
- **D. Complete recovery validation and startup behavior documentation before final approval.**

Answer: D

Explanation:

Feedback:

Recovery validation and startup behavior documentation should be completed before final approval. The scenario requires continuity evidence that goes beyond availability and backup completion.

NEW QUESTION # 117

A regional port authority uses SAP HANA for vessel movement analytics. The administrator reviews the backup process after a change to the backup destination path. SAP HANA cockpit shows that the scheduled backup job completed, but the follow-up validation step cannot locate the generated backup file in the location recorded for recovery operations. The backup catalog contains a new entry, yet the storage review shows that the file was written to a temporary path used during testing. The constraint is that the administrator must confirm that new backups are created in the recoverable destination before accepting the schedule. The team cannot rely on catalog entry creation alone.

What should the administrator do next?

- A. Increase the number of scheduled backup attempts so a later job writes to the correct recovery location.
- B. Restart SAP HANA cockpit so the catalog entry and storage path can synchronize automatically.
- **C. Correct the backup destination to the approved recovery path, run a new backup, and validate file retrieval from that path.**
- D. Accept the backup because the catalog contains a new completed backup entry.

Answer: C

Explanation:

Feedback:

This addresses the backup destination dependency at the correct layer. Correcting the path, creating a new backup, and validating retrieval confirm that scheduling, catalog recording, artifact placement, and recovery readiness are aligned.

NEW QUESTION # 118

A regional media services company is preparing a controlled SAP HANA upgrade in a mixed administration landscape. The upgrade preparation checklist shows that the software package was staged successfully. However, the lifecycle validation note shows that one prerequisite check was skipped because the same check passed during an earlier maintenance cycle. The operations manager wants to proceed because the maintenance window is short.

The constraint is that the administrator must avoid starting lifecycle execution unless the current system state is validated. The decision must account for package readiness, prerequisite status, and the risk of relying on outdated validation evidence.

What should the administrator do before starting the upgrade execution?

- A. Start the upgrade because the required package is already staged in the landscape.
- B. Proceed with the upgrade and document the skipped prerequisite check as a known operational risk.
- C. Rerun the skipped prerequisite check against the current system state and proceed only if the lifecycle validation evidence is complete.
- D. Extend the maintenance window first so the upgrade can be restarted if the skipped check causes an issue.

Answer: C

Explanation:

Feedback:

This resolves the lifecycle-state mismatch before execution. Rerunning the prerequisite check aligns the current system state, staged package, validation evidence, and upgrade approval path.

NEW QUESTION # 119

CHALLENGE 2 - Restoration Simulation Monitoring Baseline

The UAT team has two viable actions: tune memory-related settings now to improve restoration analytics, or preserve monitoring evidence first and tune only if current evidence supports it. Which option best balances performance and evidence quality?

- A. Tune now and use the improved response time as the main release readiness measure.
- B. Reject all tuning until the SAP HANA Cloud migration phase begins.
- C. Preserve baseline monitoring evidence first, then approve tuning if current evidence supports it.
- D. Replace monitoring review with field manager feedback because the dashboard is user-facing.

Answer: C

Explanation:

Feedback:

Preserving baseline monitoring evidence first is most defensible because tuning should follow current evidence. This balances performance improvement with reliable UAT evidence for release comparison.

NEW QUESTION # 120

.....

If you want to improve your own IT techniques and want to pass C_DBADM_2601 certification exam, our PremiumVCEDump website may provide the most accurate SAP's C_DBADM_2601 exam training materials for you, and help you Pass C_DBADM_2601 Exam to get C_DBADM_2601 certification. If you are still hesitated, you can download C_DBADM_2601 free demo and answers on probation on PremiumVCEDump websites. We believe that we won't let you down.
