

Cybersecurity-Practitioner Practice Exam, New Cybersecurity-Practitioner Dumps Files

BONUS!!! Download part of Prep4sureExam Cybersecurity-Practitioner dumps for free: <https://drive.google.com/open?id=1C5895OTdXKh5W7ai7pQcBJ0h95Y6iUyi>

A lot of applicants have studied with Palo Alto Networks Cybersecurity Practitioner (Cybersecurity-Practitioner) practice material and passed the Cybersecurity-Practitioner exam on the first try with their hard work and consistency. The Prep4sureExam assures the customers that they will pass the Cybersecurity-Practitioner Exam on the first try by studying from Cybersecurity-Practitioner exam material and if they fail to do it so they can claim their money back (terms and conditions apply). Buy It Now!

Palo Alto Networks Cybersecurity-Practitioner Exam Overview:

Certification Vendor:	Palo Alto Networks
Exam Name:	Palo Alto Networks Cybersecurity Practitioner Exam
Exam Number:	Cybersecurity-Practitioner
Available Languages:	English
Certificate Validity Period:	2 years
Related Certifications:	Security Operations Professional Cybersecurity Apprentice
Real Exam Qty:	60–70
Exam Format:	Multiple-choice, Ordering, Matching
Exam Duration:	90 minutes
Exam Price:	\$150 USD
Passing Score:	70% (scaled score approx. 860 on 300–1000 scale)
Recommended Training:	Palo Alto Networks Official Training
Exam Registration:	Pearson VUE Registration
Sample Questions:	Palo Alto Networks Cybersecurity-Practitioner Sample Questions
Exam Way:	In-person only at Pearson VUE test centers; online proctoring not available

Pre Condition:	No formal prerequisites; recommended for individuals entering cybersecurity or new to Palo Alto technologies
Official Syllabus URL:	https://www.paloaltonetworks.com/services/education/certification/cybersecurity-practitioner

New Cybersecurity-Practitioner Dumps Files, Cybersecurity-Practitioner Test Discount Voucher

Candidates can also check the explanations for the answers to have more understanding of the Palo Alto Networks Cybersecurity-Practitioner questions that are asked on the Cybersecurity-Practitioner practice test by Prep4sureExam. You can customize the Palo Alto Networks Cybersecurity-Practitioner exam questions and time for the Cybersecurity-Practitioner practice exam on the software. Assessing their Palo Alto Networks Cybersecurity-Practitioner Exam Preparation and speed on the practice exam software helps candidates in making required improvements and succeeding at the Palo Alto Networks Cybersecurity-Practitioner exam. The software by Prep4sureExam gives the candidates the results and progress reports to help them monitor their performance for the Palo Alto Networks Cybersecurity-Practitioner exam.

Palo Alto Networks Cybersecurity-Practitioner Exam Syllabus Topics:

Topic	Details
Topic 1	Security Operations: This domain focuses on security operations including threat hunting, incident response, SIEM and SOAR platforms, Attack Surface Management, and Cortex solutions including XSOAR, Xpanse, and XSIAM.
Topic 2	- Network Security: This domain addresses network protection through Zero Trust Network Access, firewalls, microsegmentation, and security technologies like IPS, URL filtering, DNS security, VPN, and SSL - TLS decryption, plus OT - IoT concerns, NGFW deployments, Cloud-Delivered Security Services, and Precision AI.
Topic 3	- Endpoint Security: This domain addresses endpoint protection including indicators of compromise, limitations of signature-based anti-malware, UEBA, EDR - XDR, Behavioral Threat Prevention, endpoint security technologies like host firewalls and disk encryption, and Cortex XDR features.
Topic 4	Cloud Security: This domain covers cloud architectures, security challenges across application security, cloud posture, and runtime security, protection technologies like CSPM and CWPP, Cloud Native Application Protection Platforms, and Cortex Cloud functionality.

Palo Alto Networks Cybersecurity Practitioner Sample Questions (Q95-Q100):

NEW QUESTION # 95

Which security tool provides policy enforcement for mobile users and remote networks?

- A. Prisma Access
- B. Digital experience management
- C. Service connection
- D. Prisma Cloud

Answer: A

Explanation:

Prisma Access is a cloud-delivered security platform that provides policy enforcement, secure access, and threat prevention for mobile users and remote networks, ensuring consistent security regardless of location.

NEW QUESTION # 96

Which characteristic of serverless computing enables developers to quickly deploy application code?

- A. Using cloud service spot pricing to reduce the cost of using virtual machines to run their application code
- B. Uploading cloud service autoscaling services to deploy more virtual machines to run their application code based on user demand
- C. Uploading the application code itself, without having to provision a full container image or any OS virtual machine components
- D. Using Container as a Service (CaaS) to deploy application containers to run their code.

Answer: C

Explanation:

"In serverless apps, the developer uploads only the app package itself, without a full container image or any OS components. The platform dynamically packages it into an image, runs the image in a container, and (if needed) instantiates the underlying host OS and VM and the hardware required to run them."

NEW QUESTION # 97

What are two capabilities of identity threat detection and response (ITDR)? (Choose two.)

- A. Scanning for excessive logins
- B. Analyzing access management logs
- C. Securing individual devices
- D. Matching risks to signatures

Answer: A,B

Explanation:

Scanning for excessive logins - ITDR identifies suspicious patterns such as unusual or excessive login attempts, which may indicate credential abuse.

Analyzing access management logs - ITDR tools analyze identity-related logs, including authentication and authorization events, to detect threats tied to user behavior and access anomalies.

Device security and signature matching are not core functions of ITDR; they fall under endpoint protection and traditional threat detection respectively.

NEW QUESTION # 98

In an IDS/IPS, which type of alarm occurs when legitimate traffic is improperly identified as malicious traffic?

- A. True-positive
- B. True-negative
- C. False-negative
- D. False-positive

Answer: D

Explanation:

In anti-malware, a false positive incorrectly identifies a legitimate file or application as malware. A false negative incorrectly identifies malware as a legitimate file or application. In intrusion detection, a false positive incorrectly identifies legitimate traffic as a threat, and a false negative incorrectly identifies a threat as legitimate traffic.

NEW QUESTION # 99

Routing Information Protocol (RIP), uses what metric to determine how network traffic should flow?

- A. Shortest Path
- B. Split Horizon
- C. Hop Count

- D. Path Vector

Answer: C

Explanation:

Routing Information Protocol (RIP) is an example of a distance-vector routing protocol that uses hop count as its routing metric. To prevent routing loops, in which packets effectively get stuck bouncing between various router nodes, RIP implements a hop limit of 15, which limits the size of networks that RIP can support. After a data packet crosses 15 router nodes (hops) between a source and a destination, the destination is considered unreachable.

NEW QUESTION # 100
