

# Pass JN0-364 Exam with Authoritative Download JN0-364 Pdf by PrepAwayExam

2021 Latest Exam Brain C-TS462-2021 PDF Dumps and C-TS462-2021 Exam Engine Free Download  
<https://drive.google.com/open?id=1xxb9f514qOjd6BIMYe8bUvoLsxEg5YHO>

C-TS462-2021 study material applied to all years of candidates. Despite a lot of learning materials is not difficult, but it is difficult to buy one that is suitable for you. For example, some learning materials can really help students get high scores, but they usually require a lot of time and effort to study, which is difficult for office workers. However, C-TS462-2021 Study Material is to help students improve their skills quickly by improving their learning efficiency. Therefore, when you pass exams with very little learning time.

The SAP C-TS462-2021 Exam is an excellent certification for individuals who want to enhance their SAP S/4HANA Sales knowledge and skills. The exam is comprehensive and covers all the essential concepts of SAP S/4HANA Sales. By passing this certification exam, candidates can enhance their career prospects and demonstrate their expertise on the field of SAP S/4HANA Sales.

PrepAwayExam has built customizable Juniper JN0-364 practice exams (desktop software & web-based) for our customers. Users can customize the time and JN0-364 questions of Juniper JN0-364 Practice Tests according to their needs. You can give more than one test and track the progress of your previous attempts to improve your marks on the next try.

To keep you updated with latest changes in the JN0-364 test questions, we offer one-year free updates in the form of new questions according to the requirement of JN0-364 real exam. Updated JN0-364 vce dumps ensure the accuracy of learning materials and guarantee success of in your first attempt. Why not let our JN0-364 Dumps Torrent help you to pass your exam without spending huge amount of money.

## Trusted JN0-364 Exam Resource, JN0-364 Exam Sims

PrepAwayExam follows the career ethic of providing the first-class JN0-364 practice questions for you. Because we endorse customers' opinions and drive of passing the JN0-364 certificate, so we are willing to offer help with full-strength. With years of experience dealing with JN0-364 Learning Engine, we have thorough grasp of knowledge which appears clearly in our JN0-364

study quiz with all the keypoints and the latest questions and answers.

## Juniper Service Provider Routing and Switching, Specialist (JNCIS-SP) Sample Questions (Q20-Q25):

### NEW QUESTION # 20

You are asked to configure interfaces on Juniper devices to support dual VLAN tags. In this scenario, which two interface statements would accomplish this task? (Choose two.)

- A. stacked-vlan-tagging
- B. vlan-tagging
- C. gigether-options
- D. flexible-vlan-tagging

**Answer: A,D**

Explanation:

To support dual VLAN tagging (often referred to as Q-in-Q or 802.1ad), a Juniper interface must be configured to process more than one 802.1Q header. In Junos OS, this is handled at the physical interface level ([edit interfaces <interface-name>]).

According to Juniper Service Provider documents, two primary configuration statements enable this capability:

\* stacked-vlan-tagging (Option D): This is the traditional command used to enable an interface to accept frames with two VLAN tags. When this is enabled, the router expects an outer "service" tag and an inner "customer" tag. This is specifically used in provider edge scenarios where a service provider is tunneling multiple customer VLANs.

\* flexible-vlan-tagging (Option A): This is a more modern and versatile command. It allows the interface to support a mix of different encapsulation types across different logical units. For example, with flexible-vlan-tagging, you can have one logical unit (unit 10) doing standard single-tagging and another logical unit (unit 20) doing dual-tagging (vlan-tags outer X inner Y). This is the preferred method on newer hardware (like the MX Series) because it provides the highest level of configuration flexibility.

Vlan-tagging (Option C) only enables the interface to support a single 802.1Q tag, and gigether-options (Option B) contains physical-layer settings like auto-negotiation or flow control, which do not influence VLAN encapsulation. Therefore, A and D are the correct mechanisms for enabling dual-tag support.

### NEW QUESTION # 21

What are two types of BGP messages exchanged while in the Established state? (Choose two.)

- A. notification
- B. update
- C. open
- D. request

**Answer: A,B**

Explanation:

Update messages are exchanged between BGP peers in the Established state to advertise new routes, withdraw previously advertised routes, and share path attributes for reachable prefixes.

Notification messages are used to signal errors detected in the BGP session and immediately terminate the session when a protocol error occurs.

### NEW QUESTION # 22

The MPLS Label Information Base (LIB) is stored in which table?

- A. inet.0
- B. inet6.0
- C. inet.3
- D. mpls.0

**Answer: D**

Explanation:

In Junos OS, the Routing Engine maintains several different tables to manage various types of reachability and forwarding

information. When a router is running MPLS, it must track both IP routes and label-to-label mappings.

The `mpls.0` table is the primary repository for the Label Information Base (LIB) and the Label Forwarding Information Base (LFIB). According to Juniper Networks documentation, `mpls.0` is used by transit and egress routers to perform label lookups. When a labeled packet arrives at an interface, the router looks at the top label and references the `mpls.0` table to determine the next action. This table stores the mapping of incoming labels to their corresponding operations: Pop (remove the label), Swap (replace the label), or Push (add an additional label).

It is crucial to understand the roles of the other tables to avoid confusion:

\* `inet.0` (Option D): This is the default unicast routing table for IPv4, used for standard IP-to-IP forwarding.

\* `inet.3` (Option C): This is the MPLS Path Table. It stores the egress loopback addresses of LSPs and is used by BGP for next-hop resolution to determine if a destination can be reached via an MPLS tunnel.

While `inet.3` knows about LSPs, the actual label-switching instructions reside in `mpls.0`.

\* `inet6.0` (Option A): This is the default unicast routing table for IPv6.

Therefore, for the specific purpose of storing the label base used for transit switching operations, `mpls.0` is the correct and only table used in the Junos architecture.

### NEW QUESTION # 23

Referring to the exhibit, internal BGP between R1 and R2 is not establishing. What is the problem in this scenario?

- A. R1 needs to be configured with a next-hop self policy.
- **B. R1 does not have a route to 192.168.200.2.**
- C. R1 needs to be configured with an explicit router ID.
- D. R1 and R2 must each have unique AS numbers.

**Answer: B**

Explanation:

The exhibit shows that the BGP session state is "Active," which generally indicates that the router is trying to establish a BGP session but has not received a response. One common cause for this issue is that there is no route to the BGP neighbor's address. Since the routers are using internal BGP (iBGP) and they are in the same AS, the AS number does not need to be unique, and a next-hop self policy is not strictly required for iBGP. The router-id is usually automatically determined and does not need to be explicitly set.

### NEW QUESTION # 24

Which two statements are correct about segment routing? (Choose two.)

- A. Label assignments can be advertised through LDP updates.
- **B. Segment routing adjacencies require very little resources to maintain.**
- C. There are no segment routing adjacencies to maintain.
- **D. Label assignments can be advertised through OSPF updates.**

**Answer: B,D**

Explanation:

Segment routing is a source routing paradigm that allows a source router to define the path that a packet will take through the network by assigning an ordered list of segments--identifiers that specify a forwarding path for the packet through the network. Segment Routing can be implemented over an MPLS architecture or with IPv6 (SRv6).

Segment routing does not require a full mesh of adjacencies or state per transit path in the network, which is often the case with conventional MPLS signaling protocols like RSVP-TE. It leverages the existing IGP topology for forwarding without the need to maintain a state for each LSP (Label Switched Path), hence requiring very little resources to maintain.

In segment routing, labels (or segments) are distributed via IGP routing protocols like OSPF or IS-IS with extensions to carry segment routing information. These protocols are enhanced with Segment Routing extensions to distribute labels. For example, OSPFv2 is extended with Segment Routing extensions defined in RFC 8665.

### NEW QUESTION # 25

.....

The Juniper JN0-364 practice exam will be a great help because you are left with little time to prepare for the Juniper JN0-364

certification exam which you cannot waste to make time for the Juniper JN0-364 Exam Questions. Get the Juniper JN0-364 certification by preparing through Juniper JN0-364 exam questions that will help you pass the Juniper JN0-364 exam.

**Trusted JN0-364 Exam Resource:** <https://www.prepawayexam.com/Juniper/braindumps.JN0-364.etc.file.html>

Juniper Download JN0-364 Pdf So our reputation derives from our profession, Whether you are good at learning or not, passing the exam can be a very simple and enjoyable matter together with our JN0-364 practice engine, If you just want to know the exam collection materials or real JN0-364 exam questions, this version is useful for you, We are quite confident that with Juniper JN0-364 practice exam questions you can pass the challenging Juniper JN0-364 exam.

The challenge is knowing where to begin, Adding JN0-364 Check Boxes for Multiple Selectable Options, So our reputation derives from our profession, Whether you are good at learning or not, passing the exam can be a very simple and enjoyable matter together with our JN0-364 Practice Engine.
