They have taken the different situation of customers into consideration and designed practical AWS-Certified-Developer-Associate test braindumps for helping customers save time. As elites in this area they are far more proficient than normal practice materials' editors, you can trust them totally.

## What Does AWS Developer – Associate Test Look Like?

The exam necessary to get the AWS Developer – Associate certification is coded DVA-C01, whose total duration is 130 minutes. Overall, candidates have to answer multiple-choice and multiple-response questions and get a minimum passing score of 720 points. Also, according to the information mentioned in the exam blueprint, the final number of questions in the main exam might differ depending on the difficulty of a certain test. The delivery method is either in test centers or online by using a proctored exam platform. Examinees will also have to pay a registration fee of \$150 to be considered for DVA-C01. In case they want to enroll for taking a practice exam, they should pay an additional fee of \$20. Finally, the vendor offers this exam in different languages. Apart from English, candidates can also take it in Japanese, Korean, and Simplified Chinese.

## Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q310-Q315):

### NEW QUESTION # 310

A video-hosting website has two types of members: those who pay a fee, and those who do not. Each video upload places a message in Amazon SQS. A fleet of Amazon EC2 instances polls Amazon SQS and processes each video. The developer needs to ensure that the videos uploaded by the paying members are processed first. How can the developer meet this requirement?

- A. Create two Amazon SNS topics: one for paying members and one for non-paying members. Use SNS topic subscription priorities to differentiate between the two types of members.
- B. Create two SQS queues: one for paying members, and one for non-paying members. Poll the paying member queue first and then poll the non-paying member queue.
- C. Use SQS to set priorities on individual items within a single queue: give the paying members' videos the highest priority.
- D. Use SQS to set priorities on individual items within a single queue and use Amazon SNS to encode the videos.

**Answer: C**

### NEW QUESTION # 311

A company needs to distribute firmware updates to its customers around the world. Which service will allow easy and secure control of the access to the downloads at the lowest cost?

- A. Use Amazon API Gateway and AWS Lambda to control access to an S3 bucket.
- B. Use Amazon CloudFront with signed URLs for Amazon S3.
- C. Create a dedicated Amazon CloudFront Distribution for each customer.
- D. Use Amazon CloudFront with AWS Lambda@Edge.

**Answer: B**

### NEW QUESTION # 312

A development team wants to immediately build and deploy an application whenever there is a change to the source code. Which approaches could be used to trigger the deployment? (Select TWO.)

- A. Store the source code in an Amazon EC2 instance's ephemeral storage. Configure the instance to start AWS CodePipeline whenever there are changes to the source code.
- B. Store the source code in an encrypted Amazon EBS volume. Configure AWS CodePipeline to start whenever a file in the volume changes.
- C. Store the source code in an Amazon S3 bucket. Configure AWS CodePipeline to start every 15 minutes.
- D. Store the source code in an Amazon S3 bucket. Configure AWS CodePipeline to start whenever a file in the bucket changes.
- E. Store the source code in an AWS CodeCommit repository. Configure AWS CodePipeline to start whenever a change is committed to the repository.

**Answer: B,E**

Explanation:

### NEW QUESTION # 313

A developer is writing an application in AWS Lambda To simplify testing and deployments, the developer needs the database connection string to be easily changed without modifying the Lambda code.

How can this requirement be met?

- **A. Store the connection string as a secret in AWS Secrets Manager**
- B. Store the connection string as a Lambda layer.
- C. Store the connection string in AWS KMS
- D. Store the connection string in an IAM user account.

**Answer: A**

### NEW QUESTION # 314

A developer works in an environment with multiple AWS accounts that have AWS Lambda functions processing the same 100 KB payloads. The developer wants to centralize the point of origin of the payloads to one account and have all the Lambda functions be invoked whenever the initiating event occurs in the parent account.

How can the developer design the workflow in the MOST efficient way, so all the multi-account Lambda functions get invoked when the event occurs?

- A. Use a worker on an Amazon EC2 instance to poll for the payload event. Invoke all Lambda functions using the Lambda Invoke API after using cross-account IAM roles with the AWS Security Token Service (AWS STS) AssumeRole API call.
- B. Set up an Amazon SQS queue with the queue policy permitting the ReceiveMessage action for multi-account Lambda functions. Then send the payload to the SQS queue using the sqs:SendMessage permission and poll the queue using multi-account Lambda functions.
- **C. Subscribe all the multi-account Lambda functions to an Amazon SNS topic and make a SNS Publish API call with the payload to the SNS topic.**
- D. Create a Lambda function in the parent account and use cross-account IAM roles with the AWS Security Token Service (AWS STS) AssumeRole API call to make AWS Lambda invoke the API call to invoke all the cross-account Lambda functions.

**Answer: C**
