C_S4CPR_2502 Passed - C_S4CPR_2502 Valid Exam Practice

First and foremost, even though our company has become the staunch force in this field for almost ten years and our C_S4CPR_2502 exam questions have enjoyed such a quick sale in the international market we still keep an affordable price for our customers. Second, we have prepared free demo in this website for our customers to have the first-hand experience of the C_S4CPR_2502 Latest Torrent compiled by our company before making their final decision. So do not hesitate any more, just hurry up to buy our C_S4CPR_2502 test question which will never let you down.

SAP C_S4CPR_2502 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Introduction to Cloud Computing and SAP Cloud ERP Deployment Options: This section of the exam measures skills of a Cloud ERP Consultant and covers foundational knowledge of cloud computing and SAP S • 4HANA Cloud deployment options. It provides insights into multi-tenant vs single-tenant models and helps determine the best fit for customer requirements.
Topic 2	<ul style="list-style-type: none"> • System Landscapes and Identity Access Management: This section of the exam measures skills of a SAP System Administrator and covers basic understanding of the SAP S • 4HANA Cloud system architecture, including identity and access management concepts. It focuses on setting up user roles, managing authorizations, and maintaining secure system access within the SAP landscape.
Topic 3	<ul style="list-style-type: none"> • Implementing with a Cloud Mindset, Building the Team, and Conducting Fit-to-Standard Workshops: This section of the exam measures skills of a SAP Project Manager and covers the methodology for successful cloud implementation projects. It includes adopting a cloud mindset, assembling the right project team, and conducting fit-to-standard workshops to ensure efficient and value-driven implementations.
Topic 4	<ul style="list-style-type: none"> • Data Migration and Business Process Testing: This section of the exam measures skills of a SAP Data Migration Analyst and covers the tools and processes used to migrate legacy data into SAP S • 4HANA Cloud. It includes preparation, validation, execution of data loads, and conducting business process testing to ensure data accuracy and system readiness.
Topic 5	<ul style="list-style-type: none"> • Configuration and the SAP Fiori Launchpad: This section of the exam measures skills of a SAP Implementation Specialist and covers how to configure and personalize the SAP Fiori Launchpad. It includes understanding app management, tile groups, catalogs, and business roles to ensure a user-friendly and efficient experience for end users.

SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition, Sourcing and Procurement Sample Questions (Q26-Q31):

NEW QUESTION # 26

Which of the following specifications are valid for review activities in Purchase Requisition Approval Workflow? Note: There are 2 correct answers to this question.

- A. Deadlines can be configured for reviewer tasks
- B. Reviewer receives notifications on the reviewer tasks
- C. Assigned reviewer can reject or approve the workflow
- D. Only one reviewer per workflow can be assigned

Answer: A,B

NEW QUESTION # 27

What are some characteristics of the SAP S/4HANA Migration Cockpit? Note: There are 2 correct answers to this question.

- A. Guidance and simulation of the migration process
- B. Mapping source values to SAP S/4HANA target values
- C. Combining the local and remote schema approaches into one migration project
- D. Extensibility using the Legacy System Migration Workbench

Answer: A,B

Explanation:

The SAP S/4HANA Migration Cockpit is a tool designed to facilitate data migration into SAP S/4HANA Cloud Public Edition. Below is an explanation of the correct answers:

* Mapping source values to SAP S/4HANA target values (A): The Migration Cockpit allows users to map data fields from the

source system to corresponding fields in SAP S/4HANA, ensuring accurate data transformation during migration.

* Guidance and simulation of the migration process (C):The tool provides step-by-step guidance and enables simulation of the migration process to identify potential issues before executing the actual migration.

* Extensibility using the Legacy System Migration Workbench (B):The Legacy System Migration Workbench is used for on-premise systems and is not applicable to SAP S/4HANA Cloud Public Edition.

* Combining the local and remote schema approaches into one migration project (D):This is not a characteristic of the Migration Cockpit, as it focuses on structured migration projects rather than combining schemas.

NEW QUESTION # 28

Which of the following systems are used to implement SAP S/4HANA Cloud Public Edition for a customer?

Note: There are 3 correct answers to this question.

- A. Starter system
- B. Trial system
- C. Development system
- D. Sandbox system
- E. Test system

Answer: A,C,E

Explanation:

In the implementation of SAP S/4HANA Cloud Public Edition, specific systems are utilized to ensure a structured and successful deployment process. These systems are part of the SAP lifecycle management approach and serve distinct purposes during the implementation. Below is an explanation of the correct answers:

* Test System (A):The test system is used for quality assurance and user acceptance testing (UAT). It allows customers to validate configurations, customizations, and integrations in an environment that mirrors the production system. Testing ensures that all business processes function as expected before going live.

* **Development System (C):The development system is where configuration, customization, and extension activities are performed. This system is used by developers and key users to build and adapt the solution to meet the customer's specific business requirements. It serves as the foundation for implementing new functionalities and integrating with other systems.

* Starter System (D):The starter system is a preconfigured system provided by SAP during the initial phases of implementation. It contains standard business processes and best practices tailored to the customer's industry. The starter system helps accelerate the implementation process by providing a baseline configuration that can be further customized.

* Trial System (B):A trial system is typically used for demonstration or evaluation purposes, allowing potential customers to explore the capabilities of SAP S/4HANA Cloud Public Edition. However, it is not part of the formal implementation process for a customer.

* Sandbox System (E):A sandbox system is an optional environment provided for experimentation and learning purposes. It allows users to explore the system without impacting the actual implementation.

While useful for training and testing ideas, it is not a mandatory system in the implementation lifecycle.

Documentation:Implementation Phases and Systems SAP Best Practices Explorer:Preconfigured Content for SAP S/4HANA Cloud Public Edition These references provide detailed insights into the systems and methodologies used during the implementation of SAP S/4HANA Cloud Public Edition, ensuring alignment with SAP's official guidelines and best practices.

NEW QUESTION # 29

Which of the following is a business partner category for Business Partner master data in SAP S/4HANA Cloud Public Edition?

Note: There are 2 correct answers to this question.

- A. Supplier
- B. Person
- C. Organization
- D. Customer

Answer: B,C

Explanation:

In SAP S/4HANA Cloud Public Edition, the Business Partner (BP) master data is used to manage relationships with entities such as

customers, suppliers, and other stakeholders. The business partner category defines the type of business partner being created.

* Organization (Option C): The "Organization" category is used for legal entities such as companies, vendors, or customers. It represents a group or entity that can engage in business transactions. The SAP Business Partner Master Data Guide confirms that "Organization" is a valid business partner category.

* Person (Option D): The "Person" category is used for individuals, such as employees, contacts, or representatives of an organization. This category is essential for managing personal details and relationships. The same SAP Business Partner Master Data Guide lists "Person" as a valid business partner category.

* A. Supplier: While suppliers are managed as business partners, "Supplier" is not a business partner category. Instead, it is a role assigned to a business partner within the system.

* B. Customer: Similarly, "Customer" is a role assigned to a business partner, not a business partner category.

* SAP Business Partner Master Data Guide: Explains the structure of business partner categories and roles in SAP S/4HANA Cloud Public Edition. <https://help.sap.com>

* SAP S/4HANA Cloud Master Data Management Guide: Provides details on configuring and managing business partner master data.

Why Options C and D Are Correct: Why the Other Options Are Incorrect: Key References:

NEW QUESTION # 30

When do you specify the data retention period in the SAP S/4HANA Migration Cockpit?

- A. When the project status is "Completed"
- **B. When the project status is "Finished"**
- C. When the project status is "In Progress"
- D. When the project status is "Not Started"

Answer: B

Explanation:

In the SAP S/4HANA Migration Cockpit, the data retention period is specified when the project status is marked as "Finished." This ensures that all migration data is retained for a defined period after the migration project is completed, allowing for audits or troubleshooting if needed. Below is an explanation:

* When the project status is "Finished" (B): Once the migration project is completed and marked as

"Finished," the system prompts you to define the data retention period. This step ensures compliance with data governance policies and allows for potential re-use of migration objects in future projects.

* When the project status is "Completed" (A): The "Completed" status typically indicates that the migration process has been executed but does not trigger the data retention configuration.

* When the project status is "In Progress" (C): During the "In Progress" phase, the focus is on uploading, validating, and migrating data, not on defining retention periods.

* When the project status is "Not Started" (D): At this stage, the migration project has not yet begun, so retention settings are irrelevant.
