Scrum SAFe Practitioner Exam (6.0) Sample Questions (Q180-Q185):

NEW QUESTION # 180

Which of the core competencies of the Lean Enterprise helps align strategy and execution?

- A. Team & Technical Agility
- B. Organizational Agility
- C. Agile Product Delivery
- D. Lean Portfolio Management

Answer: D

Explanation:

= Lean Portfolio Management (LPM) is one of the seven core competencies of the Lean Enterprise that helps align strategy and execution. LPM enables enterprises to establish and communicate a set of strategic themes that provide business context for decision making and investment allocation. LPM also helps to apply Lean budgeting and guardrails to empower decentralized program execution and foster innovation. LPM also supports Agile portfolio operations and governance by providing the necessary visibility, coordination, and collaboration across the portfolio. NEW QUESTION # 181

What is one of the tools associated with Design Thinking?

- A. Set based design
- B. Portfolio canvas
- C. Behavior-driven development
- D. Empathy maps

Answer: D

Explanation:

One of the tools associated with Design Thinking is empathy maps, which are a visual way to capture and organize the user's needs, goals, pains, and gains. Empathy maps help the team to understand the user's perspective, empathize with their emotions, and design solutions that address their problems and aspirations.

Empathy maps are typically created during the Discover phase of Design Thinking, where the team conducts user research and synthesizes the findings. NEW QUESTION # 182

Which of the following roles is responsible for prioritizing the Agile Team Backlog?

- A. Product Owner
- B. Release Train Engineer
- C. Scrum Master/ Team Coach
- D. Release Manager

Answer: A

Explanation:

According to SAFe, the Product Owner (PO) is the member of the Agile Team who serves as the customer proxy and is

responsible for working with Product Management and other stakeholders to define and prioritize stories in the Team Backlog¹. The PO has the primary role of ensuring that the team delivers value to the business and aligns with the Program Backlog². The PO collaborates with the team, the Scrum Master /Team Coach, and other stakeholders to refine, order, and maintain the Team Backlog³. The PO also participates in PI Planning, Iteration Planning, System Demo, and Inspect and Adapt events⁴. NEW QUESTION # 183

What is one quality practice for software development?

- A. Rapid prototyping
- B. Continuous exploration
- **C. Refactoring**
- D. Modeling and simulation

Answer: C

Explanation:

Refactoring is the process of improving the design and structure of existing code without changing its external behavior. It is a quality practice for software development because it helps to reduce technical debt, improve maintainability, readability, and testability, and enable faster delivery of value. Refactoring is one of the core engineering practices in SAFe, along with Test-First, Continuous Integration, and Pair Work. NEW QUESTION # 184

The "3 Cs" is a popular guideline for writing user stories. What does each of the three Cs represent? (Choose three.)

- **A. Card**
- B. Concept
- C. Clarification
- **D. Confirmation**
- E. Conform
- **F. Conversation**

Answer: A,D,F

Explanation:

= The "3 Cs" of user stories are three criteria that help to ensure that the requirements in your story are clear, complete, and correct. These three criteria are Card, Conversation, and Confirmation¹.

* Card: A user story card is a placeholder for a conversation. It is a brief and informal description of a software feature written from the perspective of the end user. It captures the essence of the user's need, without going into too much detail or technical jargon. It is usually written on a physical or digital card that can be easily moved and prioritized².

* Conversation: A user story card is not enough to convey all the information needed to develop and deliver the feature. It is meant to trigger a conversation between the product owner, the development team, and other stakeholders. The conversation is where the details, assumptions, risks, and acceptance criteria are discussed and clarified. The conversation is also an opportunity to collaborate, negotiate, and validate the user story³.

* Confirmation: A user story is not complete until it has a confirmation. This is a set of criteria that define what done looks like for the feature. It is also known as acceptance criteria, and it specifies the conditions that must be met for the user story to be accepted by the product owner and the customer. The confirmation is usually written as a series of testable statements that can be verified by the development team and the product owner⁴.
